Cat. No. 383-5 is a new, high-resolution, highly stable potentiometer for applications requiring miniaturization and reliability.

SPECIFICATIONS

Resistance Range: 100 ohms to 2.5 megohms linear, only. **Resistance Tolerance:** ±20%. **Power Rating (Watts):** .375 watt maximum continuous. power rating for linear tapers, but voltage not to exceed rating. Full rating at 70°C derated linearly to zero watts at 120°C. **Linearity:** ±10% independent. **End Resistance:** Linear 15 ohms maximum. **Dielectric Strength:** 750 Vac for 60 Seconds at ATM. 350 Vac for 60 Seconds 3.44 in H.g. **Working Voltage:** 350 Vdc maximum, but power not to exceed rating. **Mechanical Rotation:** 295° ±5°. **Stop Torque:** 2 in. lbs. maximum. **Torque Range:** 0.5 to 4 oz. in. **Max. No. of Sections:** One. **Weight:** .004 lbs.

Plain Bushing

High performance potentiometer packaged in a 1/2" diameter housing. Quality construction throughout. Available in two models; Cat No. 57M rated at 1.5 watts at 40°C and Cat. No. 57EJ rated at 2 watts at 70°C. The high-temperature Cat. No. 57EJ features glass-sealed terminals. Both units are corrosion resistant.

Opens new application areas for the inherent advantages of multi-turn potentiometer design. A precise 10-turn potentiometer offering electrical operating characteristics comparable to units costing far more. The Series 62 was designed specifically for the industrial instrumentation market, based upon the setability and resolution of a quality ten-turn potentiometer including better instrument control and settings for all types of electronic equipment.

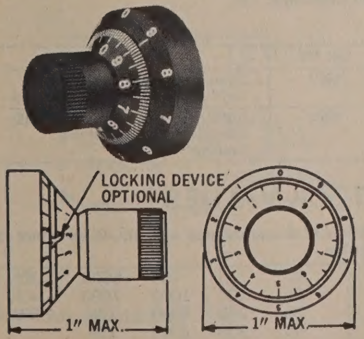
CLARODIALS
TEN TURN CONCENTRIC SCALE DIALS



LOCKING DEVICE
OPTIONAL
1" MAX.
1" MAX.

Calibrated dials designed for multi-turn potentiometers up to ten turns or other rotary devices. Requires only one inch of panel space. The knob attaches directly to the shaft, and the body of the dial is mounted rigidly to the panel. Therefore, accurate readings with a ratio of 1,000 to one for ten turns are provided with zero backlash and reading error.

Material is anodized aluminum.

Mounting requirements 1/4" shaft and 3/8" 32-NEF-2A bushing.

Adapter available for 1/8" diameter shaft.

Cat. No.	Description
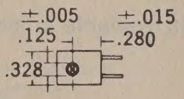
76JA-2	Solder Lug Termination
76JA-3	PC Termination



Super Setability! ... made possible through 10 times the resolution ever offered in this popular trimmer configuration. A new approach has made it possible to incorporate approximately 15 times greater winding length. The net result to the user is greater setability on the production line and in the field. Trimming costs in critical circuits drop. Performance of the circuit improves. The package shrinks in size when the Series 76 replaces other high resolution trimmers of several times the size. Panel mounting assembly available.

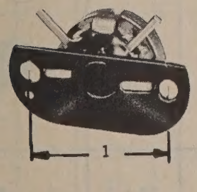
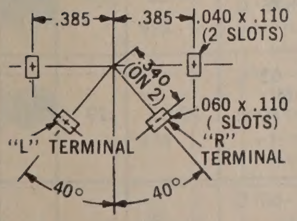
BUSHINGLESS

2 WATT—SERIES U39





Universal "Humdinger" Control 2W. Wire-Wound Series U39 is a shaftless potentiometer with the contact arm grounded to the housing. The design of terminals and mounting tabs, meets the following requirements: Above chassis mounting, as a potentiometer or rheostat; printed circuit mounting, as a potentiometer or rheostat. The terminal layout meets the popular industry standards. A fiber adapter plate is furnished with each control for above chassis mounting. Series U39 is ideally suited for radio and television requirements, as well as many industrial applications. Resistance tolerance ±20%. Linear only.

SPECIFICATIONS

Resistance Tolerance: ±20%. **Effective Rotation:** 220° ±5°. **Power Rating:** 2 watts at 40°C. **Terminals:** PC mount. **Torque Range:** 2-10 oz.-in. **Stop Torque:** 3 in.-lbs. max. **Weight:** .009 lb. (typical). **Functional Output:** Linear. **Insulation Resistance:** Ground to case.

HYBRID POTENTIOMETERS

Duncan has developed a unique process for coating wirewound resistance elements with a narrow track of RESOLON® conductive plastic. This combines the best features of each element type, resulting in the temperature stability of wire and the long life and essentially infinite resolution of conductive plastic. These new elements can be made available in all listed models of precision potentiometers, both linear and non-linear and single- and multi-turn.

[1] Extended resistance range available.
[2] Model MR46, from .5 to 20Ω is slide-wire.
[3] 3 and 5 turn not specified.
[4] All units available in metric sizes.
[5] Some resistance values are priced higher.
[6] All single turn pots available in cermet film. Contact factory for specs. and prices.
[7] Stops available.

Terms: 1%-10, Net 30 days. F.O.B.: Oceanside, CA

Delivery: Stock to 6 weeks maximum.

NON-LINEAR FUNCTIONS AVAILABLE — LOW-TORQUE SINGLE TURNS AVAILABLE

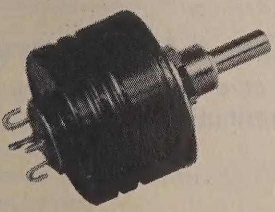
OIL-FILLED POTENTIOMETERS (WIREWOUND AND FILM)



SO-30

Electro-Techniques offers a complete line of **standard** oil-filled potentiometers for applications in corrosive and contaminated atmospheres requiring long load life.

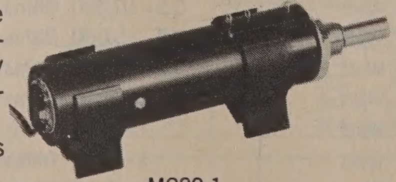
Consult our factory for the type of oil filled potentiometer required for upgrading your reliability.

LO10

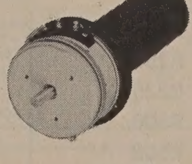
MOTOR-CONTROLLED POTENTIOMETERS (MULTI-TURN AND SINGLE-TURN)

Electro Techniques offers for the first time a complete line of motor-controlled potentiometers with motor operating currents low enough to respond accurately from operational amplifier outputs.

All Electro Techniques rotary potentiometers may be motorized for your applications.



MC20-1



MC45-1

MOTORS AVAILABLE

DC Voltages: 1½, 2, 3, 6, 12, 24, 30
RPM: 6000 to 20,000
Gear Ratios: 3.1/1 to 980,000/1
Torque: Up to 85 oz. in.

EXAMPLE

Model MC20-1 with 6 volt DC motor (19,000 RPM) with 1670/1 gear train operates at approx. 11 mA current, and clutches at approx. 20 mA. Potentiometer turns 10 RPM. Size: ⅞" dia. x 3½" long.

NOTES

Models MC20-1 and MC45-1 shown above includes motor, gear train, clutching coupler, and potentiometer assembled by Electro Techniques.

Specifications subject to change without notice.

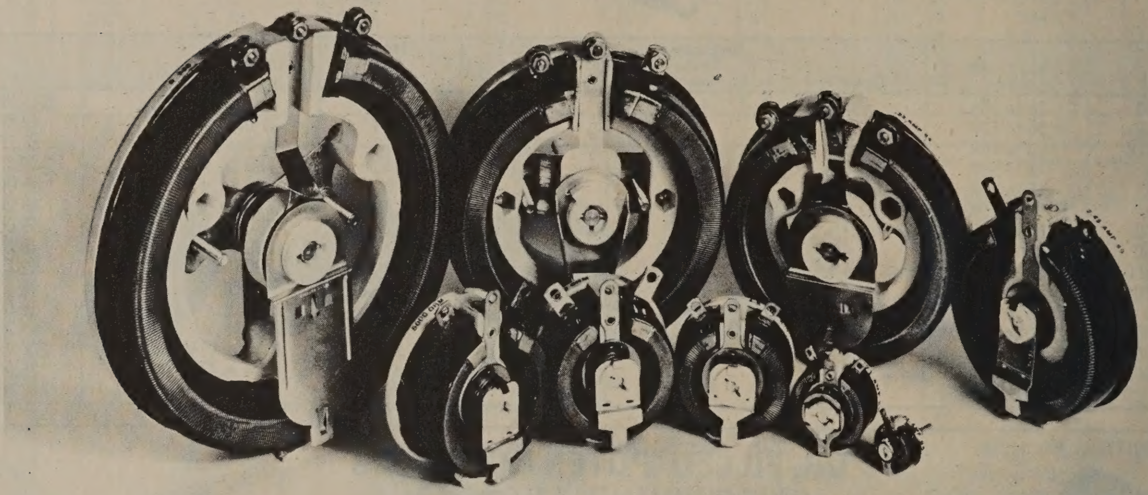
POWER RHEOSTATS

MEET THE MEMCOR FAMILY OF HIGH QUALITY WIRE-WOUND POWER RHEOSTATS



All MEMCOR Power Rheostats are vitreous enamel coated. The core and base are bonded together with vitreous enamel, thereby contributing markedly to the heat dissipation.

Standard tolerance: ±10%, ±5% available as a special.

TYPE	POWER (Watts)	RESISTANCE RANGE	DIAMETER	WEIGHT
R12½	12½ Watt	1 - 5000 Ohms	⅞″	.035 Lbs.
R25	25 Watt	1 - 5000 Ohms	1 9/16″	0.23 Lbs.

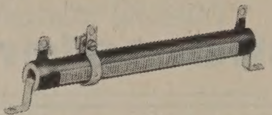
OHMITE® dividohm® type 210 adjustable vitreous enameled resistors

SERIES 210



"Dividohm" resistors make ideal voltage dividers for original equipment and replacement in transmitters, rectifiers and other apparatus. Such tapped "bleeders" are made by using one or more adjustable lugs, as required. "Dividohms" are also handy for obtaining odd resistance values, for adjusting circuits, and for use on equipment which must be set to meet various line voltages.

"Dividohm" resistors are vitreous enameled resistors on which a narrow strip has been left uncovered to expose a portion of each turn. Contact to any wire in this strip is made by an embossed contact on the adjustable lug (supplied).

WATT RATING: **The stated wattage rating applies only when the entire resistance is in the circuit.** When the adjustable lug is set at an intermediate point, the wattage rating is reduced in approximately the same proportion, i.e., if the lug is set at half the resistance, the wattage is reduced by one-half. A safe rule to follow is to make sure that the maximum rated current is not exceeded. This should be carefully checked particularly if the resistor will be used as a voltage divider with several adjustable lugs. Resistance tolerance is ±10% for the total resistance value.

*** Mounting brackets are automatically supplied in individual unit packs; supplied only when specified in bulk packs.**

[1] Popular items appear in BOLD print and are usually in stock at authorized Ohmite stocking distributors. Items in LIGHT FACE print are available from stocking distributors but are not normally stocked in depth. Parentheses indicate non-stock standard items subject to a minimum handling charge per item.

adjustable lugs

One "Screw Driver Type Adjustable Lug" is supplied with each unit. Lugs with a silver contact button can be ordered from the table shown below.

MOVING THE LUGS: Lugs always should be loosened completely before moving and not moved except while the current is off, in order to protect the exposed wire from mechanical or electrical injury and to protect the operator from dangerous voltages.

1⅛	2135	2170	2136	2171

This adjustable lug, while is illustrated at left, features two advantages — ease of adjustment and less chance of damaging the resistance wire while moving lugs. Available for 1⅛" cores.
Catalog No. **2160**

OHMITE MFG. CO., a North AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, Illinois 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

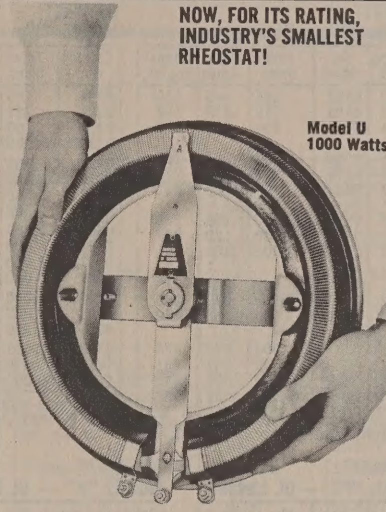
OHMITE® vitreous enameled rheostats (potentiometers)

Now, Ohmite offers TWELVE sizes in its line of famous rheostats.

In all Ohmite rheostats, the resistance wire is wound on a solid ceramic core. The turns are locked in place with tough, protective vitreous enamel or Ohmicone® silicone ceramic. Pivoted, universal action mounting of the brush, assures perfect contact. Metal-graphite contact brushes, varied to fit current and resistance, insure good contact with negligible wear of the wire. Terminals at each end of the winding permit connection of the unit as a potentiometer.

Model C
7½ Watts

NOW, FOR ITS RATING, INDUSTRY'S SMALLEST RHEOSTAT!



Model U
1000 Watts

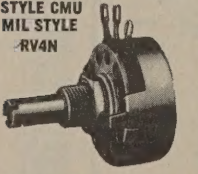
OHMITE® molded composition potentiometers

STYLE CMU
MIL STYLE
RV4N



Ohmite molded composition potentiometers (Type AB) provide high quality and dependable performance.

Because the resistance element is a thick, solid-molded ring, longer life and smoother operation are obtained. This is due also to the molded composition contact. Units are dust and splash proof, fungus and corrosion resistant and meet the requirements of military specification MIL-R-94.

STOCK "POTS" — MIL Units are stamped with MIL and Commercial Designations.

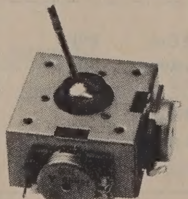
JOYSTICK SERIES



Multishaft control, level operation variable resistor

Type EVX-P2A variable resistor has a lever to operate four single or tandem variable resistors at the same time, and is ideal for use as the balance of 4-channel stereo-audio sets or as part of the dimmer functions.

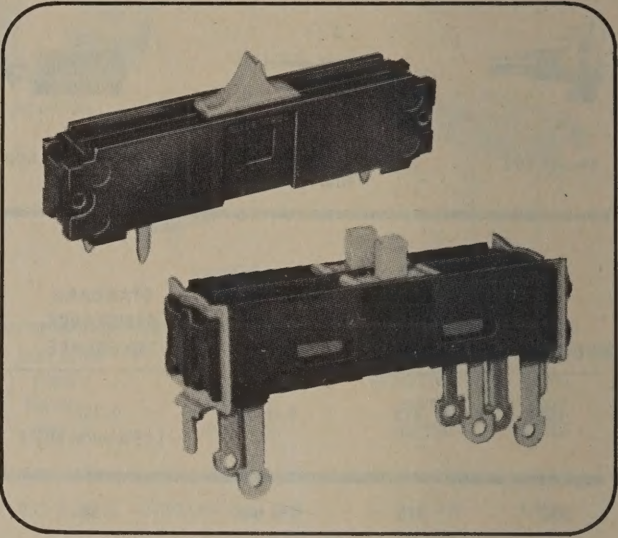
SLIDE-TROL®

Space-Age Concept in Variable Resistor Design



Compact, low-cost, flexible for a wide range of applications

Space-saving SLIDE-TROL often is the most efficient as well as the most economical answer to design and manufacturing problems. Featuring linear motion, it's the latest concept in variable-resistor design by Stackpole. Already in use in countless applications such as lighting, appliances, entertainment products and electronic instruments, time-proven SLIDE-TROL is ready and waiting to be applied to your new product.

SLIDE-TROL FEATURES

Design Flexibility

Units can be mounted horizontally or sideways. Tandems—two or more units locked together—can be actuated with a single knob. Versatile SLIDE-TROL can be the standard variable resistor throughout the product—simplifying parts control and assembly.

Compact, Lightweight

Weighs only a little more than half as much as a standard rotary control—means lower shipping costs for components or end product.

Design Appeal

Attractive SLIDE-TROL can be worked into almost any control-panel design with minimum effort. Sleek-appearing control knobs are unobtrusive, yet come in colors useful for decoration or identification.

Quality Construction

Don't let the low cost of SLIDE-TROL confuse you. Advanced design with patented features, along with modern manufacturing techniques, has resulted in the high quality that has made Stackpole famous. Compare SLIDE-TROL spec for spec with other variable resistors; see for yourself.

SLIDE-TROL APPLICATIONS

Ideal for: Office equipment • electronic organs • light dimmers • television • auto radios • electric guitars • tape recorders • electric ranges • electronic instruments • tuners and amplifiers • speed controls

Electrical Specifications

Resistance Range

Linear—100 ohms to 10 megohms
Modified tapers—250 ohms to 5 megohms
Special tapers, values—consult Stackpole
Standard tolerance—±30%
Special tolerances—consult Stackpole
Tapers—per EIA Standard RS-303

Switches—not available as integral part of SLIDE-TROL. Use independent Stackpole slide or rocker switch.

Length of Travel—1.25 inches

Maximum Power Rating—rheostat-connected load applied between terminals "A" and "B," with "B" at "C" terminal (1000 hours, 50°C maximum ambient, maximum allowable resistive change 10%):

- ☐ 1.5 watts—values under 500 ohms
- ☐ 1.25 watts—values from 500 to 5000 ohms
- ☐ 1.0 watt—values above 5000 ohms

Derate to 80% of maximum power for long-term reliability.

Maximum Operating Voltage

Across "A" and "C" terminals—1000 vdc (load not to exceed safe wattage rating)

Dielectric Withstanding Voltage

(between variable-resistor terminals and dead-metal parts, for one minute):

Minimum, bracket mounted—1500 rms, 60 Hz

PLEASE CONTACT FACTORY OR YOUR AREA REPRESENTATIVE FOR MORE INFORMATION.

STACKPOLE®

SERIES 20 MINIPOTS®

Miniature, P.C.-Mounting Trimmer Potentiometers

A Complete Line of .600-Diameter, Single-Section Minipots for Horizontal or Vertical P.C. Mounting

The value of quality design and materials — the economy of precise, automated manufacture — the proper balance of these factors means you can have an added measure of confidence when you specify Stackpole's Minipot trimmers. You know you'll get Stackpole reliability at low cost, without having to sacrifice long-term performance. That's a good feeling when you're trying to design a quality electronic product to sell at a competitive price. It's one of the good reasons why engineers have been specifying Stackpole variable resistors since 1932.

All types are available with knob featuring: finger adjust; screwdriver through-slot or hex hole for easy accessibility from either side of the control.

Stabalite® resistive elements ensure long-term, drift-free performance, even in adverse environments, and require minimum derating. Lifetime construction permits operation between −30°C and +100°C. Shelf life is virtually unlimited.

Commercial-grade knob and insulator are standard — flammability-grade knob and insulator are available.

Electrical Specifications

Overall Resistance Range

100 ohms through 10 megohms

For non-standard resistance values, tolerances, or other design parameters for special applications, consult Stackpole.

Maximum Power Rating

(To 50°C ambient temperature, free air, derate linearly to 0 watts @ 100°C ambient)

5K ohms or less—.3 watts

Over 5K ohms—.25 watts

Residual Resistance (Hopoff)

0.1% of nominal overall resistance or per EIA Standard RS-303, whichever is greater

Overall Resistance Tolerance

±30% for 100 ohms through 5 megohms

±40% over 5 megohms

Maximum Operating Voltage

(Load not to exceed safe wattage rating)

All Minipots—500 vdc

NOTES: RT11 and RJ11 Mil. Type Trimmers have been removed from Gov't and Mil. Procurement Lists. Future Procurement should call for RT12 and RJ12 Types.
Trimmer Type 989-20 has .7 x .1 Pin Spacing.
#12-28 Bushing Mount Fixture available for all 1.25″ trimmers. #10-32 used on Type 901-60.

TRW IRC POTENTIOMETERS

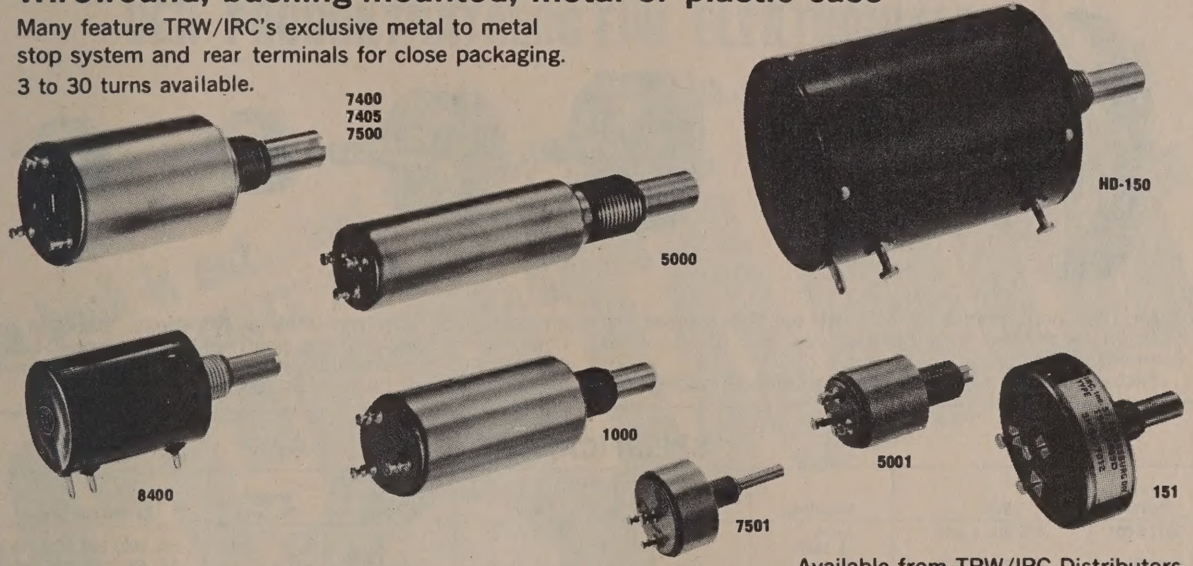
PRECISION SINGLE TURN and MULTI-TURN POTENTIOMETERS

Wirewound, bushing-mounted, metal or plastic case

Many feature TRW/IRC's exclusive metal to metal stop system and rear terminals for close packaging. 3 to 30 turns available.



Available from TRW/IRC Distributors

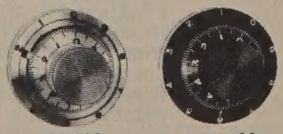
Note: Consult factory for Shaft and Bushing Modifications, Center Taps, Intermediate Turns, best Practical Resistance and Linearity Tolerances and Moisture or Hermetic Sealing.

REVODEX® TURNS COUNTING DIALS

Eliminate reading errors.



RD-400 Series 1″ Dia. 10 Turns

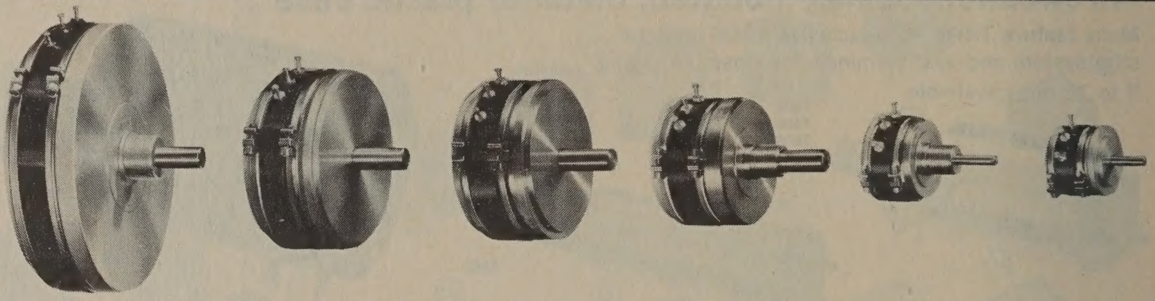
RDK-400 Series 1″ Dia. 15 Turns

Revodex® Dials are adaptable to all IRC Precision Potentiometers without need for extra panel holes. Life tested for one quarter million cycles. Available in black or clear anodized finish, with or without lock.

TRW/IRC POTENTIOMETERS, an ELECTRONIC COMPONENTS DIVISION OF TRW INC. 2801 — 72nd St. North, ST. PETERSBURG, FLA. 33733 (813) 347-2181 TWX 810-863-0357

TRW IRC POTENTIOMETERS

PRECISION POTENTIOMETERS
7/8″ to 3″ Diameter 1 to 6 Watts



These high performance devices will equal or exceed the appropriate military specifications, as well as those of competitive devices.

Factory services will supply a wide range of mechanical, electrical and environmental modifications. Standard options include special shafts, shaft seals, stops, anti-rotation pins . . . multicup assembly, voltage taps, 1% T.R. tolerance and independent linearity as low as 0.1%.

ELECTRICAL CHARACTERISTICS

Resistance Tolerance: ±3%
Effective Electrical Angle: 350° ±2°
End Settings: 1Ω or 0.1% whichever is greater
Noise Ohms ENR: 100 maximum
Dielectric Strength: MIL-R-12934
Sea Level: 1,000 volts AC minimum
Insulation Resistance, 500 volts DC: 1,000 megohms min.

MECHANICAL & PHYSICAL CHARACTERISTICS

Mechanical Angle: Continuous
Shaft Runout: .001 in. (.025mm) T.I.R.
Shaft End Play: .005 in. (.127mm) T.I.R.
Shaft Radial Play: .002 in. (.051mm) T.I.R.
Pilot Surface Runout: .0015 in. (.0381mm) T.I.R.
Lateral Runout: .002 in. (.051mm) T.I.R.
Rotational Life: 1,000,000 shaft revolutions

MECHANICAL & PHYSICAL CHARACTERISTICS (Cont'd)

Moment of Inertia: 16.0 gm cm²
Ganging: 15 cups maximum
Terminals: Gold plated turrets

ENVIRONMENTAL CHARACTERISTICS

Operating Temperature Range: −65°C to 125°C
Temperature Coefficient of Wire: 20 ppm/°C maximum
Humidity: MIL-R-12934, humidity cycling
Vibration: MIL-R-12934, high frequency
Wiper Bounce: 0.1 millisecond maximum
Wiper Shift: 1.0% maximum
Shock: MIL-R-12934, 100G
Wiper Bounce and Wiper Shift: Same as vibration
Rotational Load Life: MIL-R-12934 par. 4.6.20.2, 1,000 hrs.
Resistance Shift: 5.0% maximum
Salt Spray: MIL-R-12934

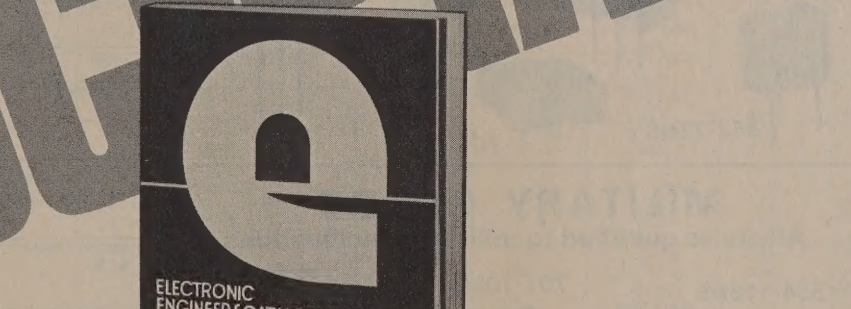
TRW/IRC POTENTIOMETERS, an ELECTRONIC COMPONENTS DIVISION OF TRW INC. 2801 — 72nd St. North, ST. PETERSBURG, FLA. 33733 (813) 347-2181 TWX 810-863-0357

ELECTRONIC ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
DER PRODUKTKATALOG FÜR ELEKTRONIKER

The book is out...and the response is in...

IMMEDIATE AND OVERWHELMING

ACCEPTANCE



The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to - and from - Western Europe and the United Kingdom.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 products alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe and the United Kingdom. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

NOTES:
- All units are humidity resistant per MIL-STD-202, Method 106.
- Model 1000 & 567-105HS contain solid stops. All other units are manufactured with slip clutch (wiper idles) for mechanical protection.

SERIES 5100 Popular 2 piece heat sink designed for circuit board mounting. The top and the base may be ordered separately.

Part Number	Figure	For Case Style	Size, Inches			TR °C/W
			L	W	H	
5166B	A	TO-66	1-32	.89	.609	14
5166C	A	TO-66	1.32	.89	.609	14
5166B (Base)	A	TO-66	1.32	.89	.609	16

SERIES 5200 Designed to maximize heat transfer unitizing a 2 piece heat sink. Black anodized base may be ordered with a gold chromate uninsulated top where electrical contact is needed.

5203B	A	TO-3	1.53	1.25	.515	12
5203C	A	TO-3	1.53	1.25	.515	12
5203B (Case)	A	TO-3	1.53	1.25	.515	14

SERIES 5300 Lightweight heat sink for plastic power semiconductors. The 5307 accommodates one device, and the 5306 accommodates one or two devices. Excellent for circuit board applications.

5306B	B	Blank	1.18	1.00	0.50	19
5306B-13	B	Two Holes (Plastic Power)	1.18	1.00	0.50	19

5531C-66	D	TO-66	1.00	1.63	1.0	13

SERIES 5600 Vertically mounted — low cost — heat sink for plastic power transistors, Triacs, and SCR's. Mounting tabs designed for either soldering (nickel finish) or bending.

5630B	E	Plastic Power (One Slot)	1.38	1.00	0.500	10
5630C	E	Plastic Power (One Slot)	1.38	1.00	0.500	11
5630D	E	Plastic Power (One Slot)	1.38	1.00	0.500	14

SERIES 5000 Series 5000 is ideal for circuit board applications where space is a premium. It provides free circulation of air from all sides and accepts all popular semiconductors case styles.

5000-005-TO-3	F	TO-3	1.81	1.81	0.50	7.3
5000-0075-TO-3	F	TO-3	1.81	1.81	0.75	6.1
5000-010-TO-3	F	TO-3	1.81	1.81	1.00	5.4
5000-0125-TO-3	F	TO-3	1.81	1.81	1.25	5.0

SERIES 60130 The new Series 60130 heat sink was specifically designed for the tab mount plastic case type semiconductor. Available with pins for circuit board solder mount or without pins for a self-threading screw mount. Longer lengths available upon request.

60130-010	G	Plastic Power (3 Holes)	1.0	1.38	0.50	13.6
60130-010-P	G	Plastic Power (3 Holes)	1.0	1.38	0.50	13.6
60130-015	G	Plastic Power (3 Holes)	1.5	1.38	0.50	12.0
60130-015-P	G	Plastic Power (3 Holes)	1.5	1.38	0.50	12.0

SERIES 5013 Minimum amount of board space required and at a very low cost.

5013B	H	TO-3	1.88	1.40	0.50	14.0
5014B	H	TO-3	1.88	1.40	0.75	12.0
5015B	H	TO-3	1.88	1.40	1.00	10.0
5016B	H	TO-3	1.88	1.40	1.25	8.0

SERIES 5007 Two piece interated circuit package heat sink removes heat from both top and bottom. Designed for 14 and 16 pin dual in line up to 0.82″ in length.

Part Number	Figure	For Case Style	Size, Inches			TR °C/W
			L	W	H	
5007A	I	IC's 14 and 16 Pins	1.24	0.75		28

SERIES 5010 One piece heat sink for 14 and 16 pin integrated circuit package. Bonded with AAVID's Ther-O-Bond 1500 for maximum thermal efficiency.

5010B	J	IC's 14 and 16 Pins	0.75	0.604	.177	35
5010C	J	IC's 14 and 16 Pins	0.75	0.604	.177	38

SERIES 3225 Low cost heat sink that is easy to install.

Part Number	Figure	For Case Style	Size, Inches		TR °C/W
			Dia.	H	
3225B	K	TO-5	0.75	0.40	50
3225C	K	TO-5	0.75	0.40	
3226B	K	TO-5	0.75	0.40	60
3226C	K	TO-5	0.75	0.40	

SERIES 60495R & 60150R Extruded heat sink designed for minimum amount of mounting space. The Model 60150R incorporates the highly efficient radial fin design.

60495R-3B	L	Blank	3.0	1.39 (Base)	1.50	2.8
60495R-3B-H1	L	TO-3	3.0	1.39 (Base)	1.50	2.8

60150R-3B-H1	M	TO-3	3.0	3.96	1.60	1.7

SERIES 5051 High performance — economical 5051 thru 5059. One piece heat sink for TO-3 and TO-66 devices, saves additional labor and cost by allowing device and sink to be mounted with same hardware.

5051B	N	TO-3	1.78	1.78	0.50	6.9
5052B	N	TO-3	1.78	1.78	0.75	6.3
5053B	N	TO-3	1.78	1.78	1.00	5.7
5054B	N	TO-3	1.78	1.78	1.25	5.3
5056B	N	TO-66	1.78	1.78	0.50	6.9
5057B	N	TO-66	1.78	1.78	0.75	6.3
5058B	N	TO-66	1.78	1.78	1.00	5.7
5059B	N	TO-66	1.78	1.78	1.25	5.3

SERIES 3230-5 The 3230-5 heat sink provides extra surface area for cooling. May be secured using boss which clears a 4-40 screw.

Part Number	Figure	For Case Style	Size, Inches		TR °C/W
			Dia.	H	
3230B-5	O	TO-5	0.75	0.25	43
3230C-5	O	TO-5	0.75	0.25	

SERIES 5690 Highest power dissipation per unit cost.

5690B-3	P	TO-3	1.83	1.83	1.31	4.5
5690B-66	P	TO-66	1.83	1.83	1.31	4.5

SERIES 5423 Space saving — clamps over the TO-3 case using virtually no additional board space.

5423	Q	TO-3	1.56	1.06	0.50	85
5425	Q	TO-3	1.56	1.06	0.75	63
5427	Q	TO-3	1.56	1.06	1.00	

SERIES 3201 Low cost TO-5 heat sink provides a very high ratio of heat dissipation to volume occupied. Ideal for components card applications.

Part Number	Figure	For Case Style	Size, Inches		TR °C/W
			Dia.	H	
3201B	R	TO-5	0.50	0.25	65

DELCO'S NEW 25-AMPERE HIGH VOLTAGE DARLINGTONS WITH THE SPEED AND ENERGY CAPABILITY YOU ASKED FOR.

Good news for motor speed control designers who have expressed a need to upgrade horsepower ratings. The 25-ampere gain of these new Darlingtons permits increased horsepower ratings of existing AC motor speed control systems and a reduction in paralleling in new designs. However, grouping of t_{off} is available for current sharing in designs with parallel Darlingtons. A speed-up diode is built into the DTS-4074 and DTS- 4075 permitting data sheet t_f typicals of 1.0 μs. Drive circuit techniques involving $I_{B2} \geqq 2$ A and a Baker clamp produce t_f typicals in the 0.4-0.6 μs range for the DTS-4066, DTS-4067, DTS-4074, and DTS-4075.

Our experience with tolerances, faults, transients, and start-stall conditions in most systems convinces us that these Darlingtons have the right trade-off between speed and peak power handling capability. Note the greater than 10 kVA region of the reverse bias safe operating graph. All this, and you still get Delco's traditional solid copper TO-3 hermetic package that has a conservative 0.75°C/W thermal resistance.

These Darlingtons are already in high volume production and are available on distributor shelves. Prices, applications literature, and data sheets from your nearest Delco sales office or Delco distributor can complete the story on these new Darlingtons.

MAJOR PARAMETER LIMITS

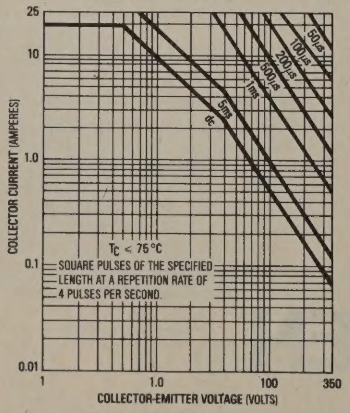
Type	h_{FE} @25A	h_{FE} @10A	V_{CEO} (sus)	V_{CE} (sat) @20A	I_{CEO} @600V
DTS-4066	5	75	350V	3.5V	0.25mA
DTS-4067	10	150	350V	2.0V	0.25mA
DTS-4074	5	75	350V	3.5V	0.25mA
DTS-4075	10	150	350V	2.0V	0.25mA

TYPICAL SWITCHING

	DTS-4066 DTS-4067	DTS-4074 DTS-4075
t_r	0.5μs	0.5μs
t_s	5.0μs	3.2μs
t_f	4.5μs	1.0μs

NPN triple diffused silicon Darlingtons are packaged in solid copper cases conforming to JEDEC TO-3 outline dimensions.

SAFE OPERATING CURVES



Features of Delco's new DTS-4066, 4067, 4074, 4075 Darlingtons.

☐ Upgrade existing motor speed control horsepower r

☐ Reduce need for paralleling in new systems.

☐ Offer switching speed improvements over our earlier types.

☐ Achieve greater than 10 kVA peak power dissipation.

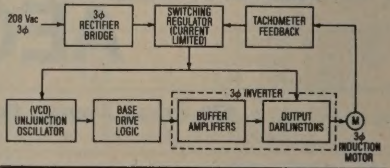
☐ Available with t_{off} grouping.

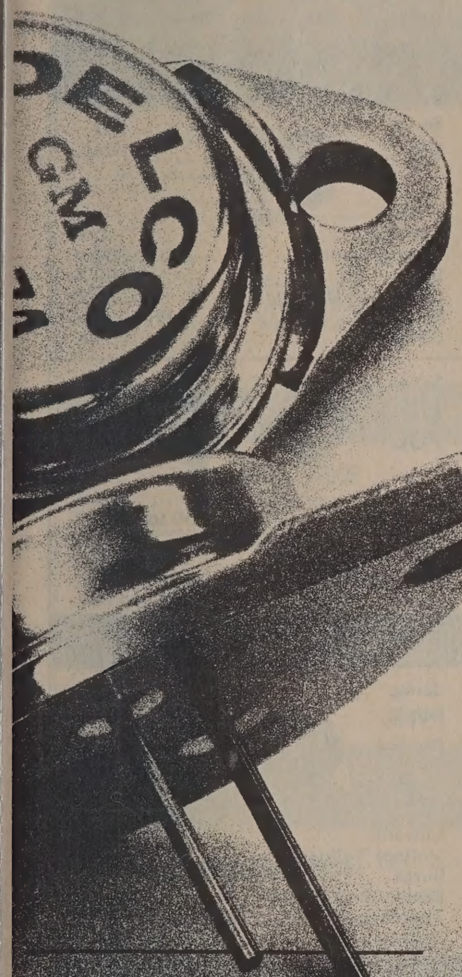
☐ Delco hermetic copper package with 0.75°C/W.

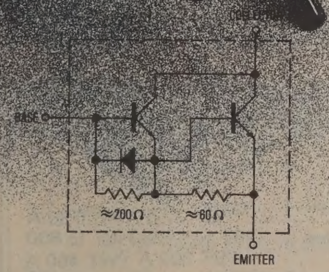
☐ Currently in high volume production.

208/220 Vac, 3φ MOTOR SPEED CONTROL

6 STEP WAVEFORM—5 to 60 Hz—1.5% SPEED CONTROL ACCURACY







SPEED-UP DIODE USED ON DTS-4074/4075 ONLY

3ϕ DARLINGTON INVERTER DTS-4066-4067

GENERAL SPECIFICATIONS: Metal base construction for heat sink or chassis mounting. All types Recognized under UL Component Program or Recognition Applied For, 1,500 V RMS dielectric strength. All available center tapped, with common positive or negative, or as Doublers.

We also offer a complete range of other rectifiers: High voltage diodes and axial lead rectifiers with ratings up to 30 KV and currents up to 6 A; blocks and assemblies rated to 250 KV and 5 A; and a large group of television rectifiers.

Panasonic

ZNR TRANSIENT/SURGE ABSORBERS

Panasonic ZNRs are zinc oxide nonlinear resistors whose resistance changes as a function of the applied voltage. The ZNR has a bilateral and symmetrical V-I characteristic curve. Gives your circuit clamping protection in either direction. The ZNR thus provides a highly reliable and economical way to protect against repeated high voltage transients and surges such as those produced by lighting, switching surges and noise spikes.

FEATURES

- Excellent clamping voltage characteristic and fast response time (<50 nsec.) when subjected to impulse surges. Eliminates the discharge lag that is indicative of gap-type arrestors.
- Bilateral and symmetrical V-1 characteristic curve. The ZNR can, therefore, be used both in AC and DC circuits, for protection of either positive or negative transients.

HY-A-SIL | HIGH-AMPERE SILICON RECTIFIERS

FEATURES

- High Operating Temperature, 190°C (Up to 120°C ambient)
- High Operating Voltage (Up to 600 p.i.v.)
- High Efficiency (99% compared to about 75% for selenium)
- Excellent Regulation (4% compared to about 15% for selenium)

SARKES TARZIAN SEMICONDUCTORS

Sarkes Tarzian Inc. offers a complete line of standard and special semiconductor diodes and assemblies.

Silicon Avalanche Rectifiers
SCRs, Zener Diodes
High Voltage Rectifiers
Fast Recovery Rectifiers
Klipvolt Surge Suppressors
Selenium Rectifiers

The products listed on the next 10 pages represent the most popular types that are available from stock, or on short delivery cycles through distributors.

SPECIAL DESIGNS: We thrive on "special" rectifier business because our "special" engineering and production departments are experienced in short run, unique design devices. We can produce them at a price you can afford and are anxious to be of service for devices with special characteristics of packaging requirements. Contact your Tarzian sales representative or submit prints directly to our engineering department.

SILICON AVALANCHE RECTIFIERS 1 TO 350 AMPERES

All rectifiers listed here have avalanche characteristics and surge capabilities 20-50% higher than other rectifiers of the same current rating. They can also be supplied with controlled avalanche characteristics. Large chips and high conductivity construction eliminate the need for additional surge suppression components usually required in power supply circuitry. The stud base units are normally supplied with the anode connected to the solder terminal. For anode connected to the stud, change suffix letter "P" to suffix "N" in the part number.

FAST RECOVERY RECTIFIERS

These listings represent only a portion of the devices that Tarzian can supply. Recovery time is 200 manoseconds maximum. Lower recovery times are available depending on voltage and other characteristics. These are high efficiency, rugged devices that are applicable to a broad range of consumer, industrial and military applications.

HIGH VOLTAGE FAST RECOVERY RECTIFIERS

These high voltage, fast recovery diodes are series connected junction devices that will provide reliable operation up to 350 mA and over 50,000 volts. Recovery time is 200 nanoseconds maximum. Rectification efficiency is excellent through 100 kHz so that they can be used in doublers, triplers, quadruplers and other applications where high efficiency at high frequency is required.

AVALANCHE SILICON BRIDGE RECTIFIER ASSEMBLIES

SINGLE PHASE FULL-WAVE BRIDGES

Tarzian produces the industry's largest variety of standard bridge rectifier assemblies. The most frequently used types are listed, but standard designs are available through 200 amperes and PIV characteristics through 1400 volts.

Controlled avalanche characteristics are available with any of the devices shown here. They are supplied with ranges of 200-600, 400-800 and 600-1000 PIV. For controlled avalanche units, substitute the prefix "SCA" for the prefix "S" in the part number.

Fast recovery bridge assemblies through 500 amperes with PIV characteristics through 600 PIV can be supplied with a 200 nanosecond recovery time. To order any assembly here with fast recovery characteristics, substitute the prefix "SFR" for the prefix "S". For other types, contact the Tarzian Engineering Department.

SARKES TARZIAN SEMICONDUCTORS

HIGH VOLTAGE SILICON ASSEMBLIES

Sarkes Tarzian high voltage avalanche rectifiers cover a wide range of voltage ratings. Devices with PIV characteristics up to 150,000 volts can be supplied. Standard devices up to 40,000 volts, as described here, are available from stock. All are rated at 55° Ambient.

Special high voltage rectifier assemblies can be designed and built to your specifications, along with high current, high voltage avalanche rectifiers. High current, high voltage avalanche rectifiers are also produced.

High voltage rectifiers can be supplied with fast recovery characteristics. See page 3880 for types available from stock. Special case or terminal styles are available.

SARKES TARZIAN SEMICONDUCTORS

KLIPVOLT SURGE SUPPRESSORS

Tarzian Klipvolt Selenium suppressors provide superior protection aaginst voltage transients. They turn on in a few microseconds, thus preventing destruction of semiconductor devices or circuit malfunction.

Tarzian Klipvolt suppressors are manufactured with a unique random oriented crystalline structure that distributes the current evenly over the entire cell. Destructive hot spots are eliminated providing a substantially greater margain of safety against high transient current surges that can be obtained by other devices.

Many other types of Klipvolt suppressors are available, only the more popular types are listed. Contact the factory for any unit you need that is not shown here.

*See Fig. "O" on page 3887 of these pages for typical configurations.

SELENIUM RECTIFIERS

The industry's most extensive line of selenium rectifiers is manufactured by Tarzian by a process that results in a voltage drop that is essentially constant with time. Aging is virtually eliminated. Contact the factory for product information and prompt engineering assistance.

"KW-PAC" HIGH VOLTAGE SILICON RECTIFIERS

The Semtech "KW-PAC" is a new high density, high current, silicon rectifier for use in commercial, industrial and military applications. Designed and tooled to be efficiently mass produced, "KW" can be used economically in existing applications. The rectifier can be utilized in all standard, single and polyphase rectifier circuits and is specifically adaptable for use in power supplies. These devices are rectangular in shape and thereby provide easy mounting in either air or oil.

"KW-PAC" rectifiers are capable of meeting stringent electrical, mechanical and environmental specifications.

"TUBE-PAC" HIGH VOLTAGE SILICON RECTIFIERS

"TUBE-PAC" is Semtech's new line of silicon, high-voltage rectifiers intended as a direct plug-in replacement part for most popular mercury-vapor and vacuum glass tube-type rectifiers.

Designed to last the life of the equipment, Semtech's "TUBE-PAC" are smaller, corona-free, dissipate heat more effectively and eliminate filament power. No special adaptors are required to use Semtech's "TUBE-PAC."

"STACPAC"

"Stacpac", a new concept in power rectifier stacks for use in high voltage, high current applications. Unique in design, "Stacpac" completely eliminates all the external component parts and solder joints usually found in devices of this type. All components are encapsulated and connected to aluminum discs, that in turn serve as compensation, cooling fins and corona protection. Internally, "Stacpac" utilizes the Semtech solid construction, double tungstaloid, silicon rectifiers. "Stacpac" was designed specifically to streamline packaging, replace multiple stud rectifiers and auxiliary compensation in high voltage, high current applications.

CORPORATION 652 Mitchell Road, Newbury Park, California 91320 (805) 498-2111, (213) 628-5392 / TWX: 910-336-1264

HIGH VOLTAGE MODULES

High voltage modules ("HVM"), a new building block approach for high voltage requirements. The devices can be stacked to provide either higher voltage assemblies or other circuit configurations such as doublers, center taps and bridges. "HVM" completely eliminates all external component parts and solder joints usually found in devices of this type. All components are encapsulated and connected to metal discs that, in turn, serve as compensation, cooling fins and corona protection. Internally. "HVM" utilizes the Semtech Metoxilite silicon rectifiers. Easy to assemble and mount, simple to screw together; meets the various circuit configurations and equipment mounting requirements.

"KV-PAC" HIGH VOLTAGE SILICON RECTIFIERS, DOUBLERS AND CENTER TAPS

New high voltage silicon rectifier assemblies in a rugged, functional design. "KV-PAC" has easy-to-use mounting slots and universal 3-way electrical connections. Designed to operate at 0.6 Amp when utilized as a half-wave rectifier and 1.2 Amps in a center-tap, doubler or bridge circuit application. Economical, for usage in commercial and industrial applications such as power supplies for the microwave ovens.

"SLIMPAC" HIGH VOLTAGE-HIGH CURRENT SILICON RECTIFIERS

The Semtech's "Slimpac" is a new high density high voltage high current silicon rectifier for use in industrial and military applications which require small, lightweight rectifiers without compromise on the required high reliability criteria. Designed and tooled to be efficiently mass produced, "Slimpac" can be used economically in existing applications. The rectifier can be utilized in all standard, single and polyphase rectifier circuits. Designed to be corona free, the unit is capable of meeting stringent electrical, mechanical, and environmental specifications.

"CUPAC" 150 SILICON POWER RECTIFIERS

Semtech Corporation introduces "CuPac" 150, a new series of high current silicon rectifiers with fast recovery characteristics. OFHC** insert base and stud allow the internal Metoxilite rectifiers to be heat sunk from cathode, anode or both. The secondary epoxy case provides a long external leakage path necessary for P.I.V. to 600 volts.

This series has been specifically designed for high frequency, high power industrial, military and space applications.

TECHNICAL BULLETIN MB31

Maximum Operating & Storage Temperature 150°C — Mounting Torque 35 - 40 Inch Lbs.

Recovery conditions: 0.5 amp forward current to 1.0 amp reverse current.

Recovery time measured when rectifier recovers to .25 amp measured on individual rectifiers prior to assembly.

†OFHC — Oxygen Free High Conductivity

1 For Reverse Polarity, Add "R" After Type No.

2 STANDARD PART COMES WITH NO. 8 A.W.G. — FLEX LEADS, ADD LETTER W AFTER TYPE NO. — ADD LETTER L AFTER TYPE NUMBER TO SPECIFY LUG TYPE.

3 For Negative Polarity, Add "N" After Type No.

*VF is measured at pulse if duration = 1.0 millisecond.

Semtech reserves the right to change specifications without notice.

Standard: Cathode to Base

DO-5 "STUD" SILICON POWER RECTIFIERS

Semtech Corporation introduces a new series of high current silicon stud rectifiers with fast recovery characteristics.

This series has been specifically designed for high frequency, high power industrial, military and space applications. Designed with Metoxilite rectifiers in a DO-5 base and easy-to-solder to terminal.

"ALPAC® - R50" SILICON BRIDGE RECTIFIERS

"ALPAC-R50" is a packaging concept designed to replace discrete and stud rectifier arrays offering increased reliability and lower production costs for the customer. "ALPAC-R50" utilizes the Metoxilite hermetically sealed rectifier — NASA and MIL approved rectifiers available. Internal components are supported in a low thermal impedance, epoxy thermoset-filled high alumina ceramic. This construction firmly secures and insulates the internal components to temperatures above 300°C. "ALPAC-R50" is designed for utilization in power supplies, AC to DC converters, motor control circuits, etc.

"ALPAC-50" SILICON BRIDGE RECTIFIERS

Semtech Corporation introduces "ALPAC-50", a complete line of Single Phase, Silicon Bridge, Rectifier Circuits. Designed in Aluminum Cases to provide maximum thermal conductivity and simple installation.

"ALPAC-50" terminals are insulated from case. Internally the device utilizes the Semtech high performance Metoxilite rectifiers. The bridges are designed for utilization in power supplies, AC to DC converters and motor control circuits.

"ALPAC® SR." SILICON BRIDGE RECTIFIERS

Semtech offers a wide choice of high current silicon bridge rectifiers for military and industrial applications. Leading the "Alpac Sr." family of heavy-duty products, these bridge rectifiers incorporate high-performance, solid, double tungstaloid pin, silicon junctions, insulated terminals, and light weight, easy-to-mount aluminum cases. Aluminum cases also provide maximum thermal conductivity. "Alpac Sr." bridges are designed for utilization in power supplies, AC to DC converters and motor control circuits.

"ALPAC® JR. - 3" 3 PHASE SILICON BRIDGE RECTIFIERS

"ALPAC JR. - 3" is a packaging concept designed to replace discrete and stud rectifier arrays offering increased reliability and lower production costs for the customer. "ALPAC JR. - 3" utilizes the Metoxilite hermetically sealed rectifier — NASA and MIL approved rectifiers available. Internal components are supported in a low thermal impedance, epoxy thermoset-filled high alumina ceramic. This construction firmly secures and insulates the internal components to temperatures above 300°C. "ALPAC JR. - 3" is designed for utilization in power supplies, AC to DC converters, motor control circuits, etc.

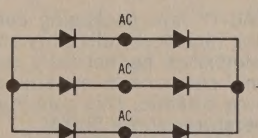
Maximum Operating and Storage Temperature —55°C to +150°C.



"ALPAC® - 3" 3 PHASE SILICON BRIDGE RECTIFIERS

"Alpac-3," 3-phase silicon bridge rectifiers incorporates much of the original "Alpac"... aluminum case for maximum thermal conductivity, light weight, and simple installation. Internally, "Alpac-3" utilizes the Semtech high-performance silicon junctions bonded between solid double tungstaloid pins. "Alpac-3" is well suited for utilization in power supplies, AC to DC converters and motor control circuits.

"ALPAC"® SILICON BRIDGE RECTIFIERS

Semtech Corporation introduces "ALPAC" a complete line of Single Phase Silicon Bridge Rectifier circuits. Designed in Aluminum Cases to provide maximum thermal conductivity and simple installation. "ALPAC" universal terminals, insulated from case, provide a 3 way electrical connection: fast disconnect, wire wrap around and hole wire insert for soldering.

Internally the device utilizes the Semtech high performance solid double heat sink junctions designed for mechanical strength and eliminating the use of solders for improved reliability. The bridges are designed for utilization in power supplies, AC to DC converters and motor control circuits.

"PCB" SILICON BRIDGE RECTIFIERS

Semtech Corporation introduces a new series of silicon rectifier bridges designed for circuit board mounting. Features include an all-welded internal assembly with Metoxilite rectifiers encapsulated to provide dependable electrical, thermal and mechanical reliability. Bridges are designed for commercial, industrial and military applications.

"COMPAC" BRIDGE RECTIFIERS

MULTI-PURPOSE

SOLID SILVER LEADS: DIAMETER .029 ±.002"; LENGTH 7/8" MINIMUM
OPERATING AND STORAGE TEMPERATURE −55°C TO +150°C

Sub-miniature, rugged, highly-reliable and economical, are the only adjectives necessary to describe Semtech's "Compac" silicon bridge rectifiers. Incorporating Semtech's Suprataxial silicon junctions, solid silver leads and high-temperature molding compounds, the units provide maximum mechanical, thermal and electrical reliability. These silicon bridge rectifiers will meet stringent requirements of military, industrial and consumer products applications.

"COMPAC-3" SILICON 3 PHASE

Semtech now offers a line of "Compac" sub-miniature medium power, 3-phase full wave bridge rectifiers. These units utilize Semtech's unique Suprataxial silicon junctions. Sub-miniature size makes these bridge rectifiers easy to package. Use of high temperature compounds provides excellent mechanical, thermal and electrical reliability. These silicon bridge rectifiers easily satisfy the stringent requirements of military and industrial as well as consumer applications.

FAST RECOVERY 1½ AMP

A "Fast Recovery" silicon rectifier bridge offering improved rectification efficiency for higher frequency applications.

The Fast Recovery characteristic offers the designer new capabilities for advanced design in reducing package sizes with improved performance and higher reliability. The bridge utilizes the Semtech rugged solid internal construction hermetically sealed junctions molded with high temperature compounds to give maximum in mechanical, thermal and electrical reliability. This easy to use package was designed for use in commercial, industrial and military applications.

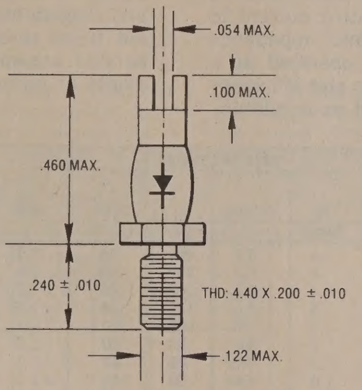
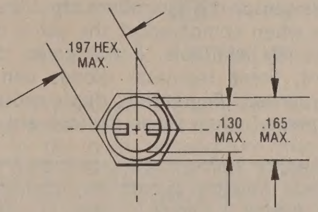
METOXILITE LOW DYNAMIC IMPEDANCE MINI-STUD SILICON VOLTAGE REGULATORS

This new series of devices offers significantly lower dynamic impedance when compared at the same operating current to those presently available. For a given dynamic impedance requirement, these regulator diodes can be operated at a lower bias current. Regulation, ripple reduction and efficiency will be improved when these devices are used as regulators. Cased in Metoxilite, they provide the ultimate in hermeticity and ruggedness. The metal oxides which form the outer case are fused directly to the high temperature metallurgically bonded assembly. This Metoxilite device exceeds requirements of current military and space program specifications.





Power Rating is 18 watts at 100°C Case derated linearly to zero at 175°C case

Thermal Impedance junction to case (Rθjc) is 4° C/W

Operating and Storage temperature range is −65°C to +175°C

Stud Torque maximum is 28 inch - ounces.

Notes: ① For 10% tolerance add suffix A (i.e. MY6.8A is ±10% tol.). Non-suffix type is 20% tolerance. Cathode to stud is standard, for reverse polarity add suffix R to part number (i.e., MY6.8AR is ±10% tol. with anode to stud).

② Rating shown for ±5% tol. at 100°C case.

③ Single cycle sine-wave of 8.3 mS duration.

BI-POLARITY SILICON TRANSIENT SUPPRESSORS

This new series of silicon bi-polarity transient suppressors is unique in that a single device will provide voltage transient protection symetrically (i.e., provide protection for A.C. signals in addition to D.C.). This new series of devices has peak pulse power ratings of 500 or 1500 watts for 1 millisecond and its response time is effectively instantaneous (less than 1 x 10^{-12} sec.). Therefore, these versatile devices have many protection applications where large voltage transients can permanently damage voltage-sensitive components. Its response time affords protection for integrated circuits, MOS devices, hybrids, and many other voltage-sensitive components. The devices are encased in Semtech's Metoxilite, fused directly to the high temperature metallurgically bonded assembly. For use in commercial, industrial, military and space programs.

Characteristics @ 25°C applies in either direction.

Can be supplied as JAN, JANTX, or JANTXV to MIL-S-19500/516 (EL).

CORPORATION 652 Mitchell Road, Newbury Park, California 91320 (805) 498-2111, (213) 628-5392 / TWX: 910-336-1264

METOXILITE "MINISTAC" FAST RECOVERY HIGH VOLTAGE SILICON RECTIFIERS

Semtech Corporation introduces a new Sub-Sub-Miniature High Voltage Metoxilite Rectifier. Ideally suited for low current high voltage applications and multiplier circuits. Improved reverse leakage and reverse recovery parameters at elevated temperatures. A silicon multi-junction device utilizing a high temperature tungsten pin bonded construction with expansion coefficients matched. The void-free, solid monolithic technology results in corona-free operation. The Metoxilite hermetic seal meets or exceeds stringent temperature cycling and humidity requirements of military, space, industrial and consumer-product applications.

	Peak Inverse Voltage	Max. Static FWD. Voltage @ 10 mA	Average Rectified Current 25°C	① Max. Static Rev. Current @		② One Cycle Surge	③ Recovery Time	Max. Junction Cap. at 100V
				PIV 25°C	2/3 PIV 100°C			
Type No.	**Volts**	**Volts**	**mA**	**µA**	**µA**	**Amps**	**NS**	**PF**

FM150	15,000	20	10	1.0	10	2	300	1.0

Operating Junction Temperature range: −65°C to +150°C. Storage Temperature range: −65°C to +175°C.

① At typical room lighting (50 to 75 foot candles, fluorescent type)

② I_{fsm} @ 8.3 ms ½ sine wave

③ Recovery conditions: 5 MA forward current to 10 MA reverse current.
Recovery time measured when rectifier recovers to 2.5 MA.

NOTE: When utilized at maximum PIV ratings subminiature high voltage rectifiers should be used in oil environment or encapsulated in epoxy or other types of conformal coatings.

OTHER JAN TYPE SILICON RECTIFIERS

Semtech Corporation provides a multipurpose Hermetic Seal Silicon Rectifier incorporating advance design and engineering techniques never before available to the electronics industry at a nominal cost. This new rectifier utilizes solid internal construction with a package combining high mechanical strength, superior thermal shock resistance, rugged hermetic seal, high dielectric strength and excellent thermal conductivity properties.

REFER TO INFORMATION ON METOXILITE SILICON RECTIFIERS FOR DEVICES THAT ARE AVAILABLE TO NEW MSFC/NASA AND MILITARY SPECIFICATIONS.

GENERAL PURPOSE MIL-S-19500/286C including JAN, TX and TXV

NOTE: 1 T_{rr} 2 µsec.

Device Type	Reverse Voltage		Forward Current ①	Reverse Current Max.		Instantaneous Forward Voltage	Repetitive Surge Current	1 Cycle Surge Current tp = 8.3 ms	Reverse Recovery Time ②		Typ. Thermal Impedance ③

METOXILITE SILICON RECTIFIERS — ALSO AVAILABLE TO NEW MSFC/NASA AND MILITARY SPECIFICATIONS (JAN, JTX AND JTXV

200 TO 1000 VOLTS
LOW REVERSE LEAKAGE
SOLID INTERNAL CONSTRUCTION
SUPERIOR THERMAL SHOCK RESISTANCE
FOR NEW PACKAGING DESIGN

A multi-purpose, high current axial lead silicon rectifier, ideally suited to maximize small electronic package designs. Metoxilite (fused metal oxides) is fused to the metallurgically bonded junction/tungsten-pin assembly forming a "tough" subminiature package. Hermetically sealed and designed to meet stringent temperature cycling, humidity and other environmental requirements per MIL-STD-750A. A general purpose rectifier for use in military, space, industrial and consumer product applications, such as: power supplies, AC to DC converters and control circuits.

METOXILITE LO-CURRENT SILICON RECTIFIERS

Metoxilite is Semtech's new multipurpose high current axial lead silicon rectifier, ideally suited for small electronic package design. Through utilization of new design and manufacturing techniques, the Metoxilite device provides the ultimate in hermeticity and ruggedness. The metal oxides which form the outer case material are fused directly to the high temperature metallurgically bonded assembly. The Metoxilite device exceeds environmental requirements of current military and space program specifications. A general purpose rectifier suitable for all applications.

EPITAXIAL POWER TRANSISTORS

. . . FOR FAST SWITCHING POWER APPLICATIONS

SSDI
POWER SEMICONDUCTORS

These high speed SSDI epitaxial base transistors feature fast turn-on and turn-off for switching efficiency at high operating frequencies. The high linear gain of these devices across the entire current range can eliminate or reduce driver transistor requirements. This line of fast-switching NPN power transistors consists of three basic series rated 10 amps, 40 amps and 90 amps.

- **t_{on} 300-600 ns MAX.**
- **$t_{(off)}$ 300-600 ns MAX.**
- **VOLTAGES TO 500 $V_{CEO(SUS)}$**
- **LOW SATURATION VOLTAGES**
- **BROAD LINEAR GAIN**
- **MAXIMUM I_C TO 90 AMPS**
- **UNIFORM t_r AND t_f**
- **f_T FROM 20-60 MHz**

$V_{CEO(SUS)}$ to 500 volts provides increased voltage safety margins; excellent S.O.A. permits applications where high forward bias peak power is required. All devices are hard solder construction to withstand extreme thermal variation.

SSDI ALSO MANUFACTURES:

EPION™

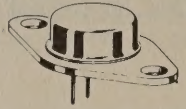
ULTRA-FAST RECOVERY RECTIFIERS

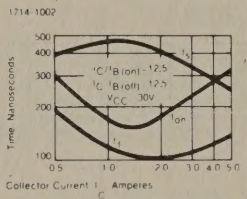
A truly unique, State-of-the-Art, **EPION™ ION-IMPLANTATION PROCESS** has enabled the development of these single-chip rectifiers, in current ratings from 1-100 AMPS, eliminating the inherent reliability problems experienced with competitive multiple-junction rectifiers.

- **10-90ns MAXIMUM RECOVERY FROM 1-100 AMP RATINGS**
- **SINGLE-CHIP GEOMETRY ELIMINATES MULTIPLE-JUNCTIONS**
- **LOWEST AVERAGE FORWARD VOLTAGE DROP AT RATED CURRENT AND TEMPERATURE (from 600 mv)**
- **PEAK INVERSE VOLTAGES TO 150 VOLTS AVAILABLE**
- **−55°C TO +200°C STORAGE AND OPERATING TEMPERATURE**
- **ALL DEVICES HERMETICALLY SEALED**

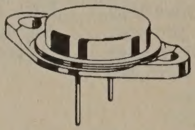
TYPICAL SWITCHING SPEEDS

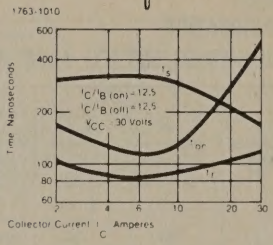
10 AMP (PEAK)
Series 1714, 1716, 1718, 1814





20-40 AMP (PEAK)
Series 1723, 1743, 1748, 1763, 1768, 1843





65-90 AMPS (PEAK)
Series 1756, 1776, 1781, 1856

Staver...
Heat Sinks
for Transistor and I.C. applications

Staver Thermoflags® and Thermovanes® combine the principles of radiation, convection and conduction for superior heat dissipation. Four distinct benefits result: they are *lightweight* and *compact* because they provide efficient performance in smaller sizes. Simple design means they can be made on high speed production equipment at *low cost*. And they are *flexible* in application; there's a Staver heat sink available for most popular transistors and integrated circuit packages.

Thermoflags Readily adaptable to almost any space limitations.

TRW POWER SEMICONDUCTORS

...Serving Many Markets

TRW Power Semiconductors manufactures a line of quality products for the military, computer, industrial, avionics and automotive markets. The product line includes such power devices as high voltage Darlingtons, high current Schottky diodes, fast recovery rectifiers, and fast switching transistors. Additional quality products manufactured are varactor diodes, low voltage Avalanche zeners, low current zeners, AGC diodes, high voltage rectifiers and custom assemblies.

Among the many applications for the products are switching regulated power supplies, motor controls, electronic ignitions, instruments, and portable battery operated equipment.

TRW Power Semiconductors offers the best combination of reliability, quality control, volume production capability, utilizing the latest engineering advances and manufacturing techniques.

DARLINGTONS

High Voltage Darlington Transistors	SVT6000 thru SVT6253

SWITCHING TRANSISTORS

Power Switching Transistors	
Low Voltage NPN	2N4305, 2N4307 and SVT60-5 2N6579 thru 2N6584 2N6585 thru 2N6590 2N5326 thru 2N5331
High Voltage NPN	SVT200-10 thru SVT300-10 SVT250-5 thru SVT450-5 SVT350-3 thru SVT450-3 SVT400-12

RECTIFIER DIODES

Power Schottky Diodes	SD-41 and SD-51 IN6095 thru IN6098
Axial-Leaded Fast Recovery Rectifiers	DSR3050 thru 31000 DSR5050-51000 IN5415 thru 5420 IN5615, 5617, 5619, 5621, 5623, IN5802 thru IN5811
Ultra-Fast Power Diodes	SVD50-6 thru SVD100-6 SVD50-12 thru SVD450-12 1N5409 and 1N5410
High Voltage Rectifiers to MIL-S-19500/142A	
High Performance Rectifiers	
Microdiodes	

ZENERS

Low Voltage Avalanche Zeners	
General Purpose LVA Zeners	LVA43A thru LVA100A
High Performance LVA Zeners	LVA343A thru LVA3100A
High Performance, Low Current—250μA LVA Zeners	LVA450A thru LVA498A
LVA Zeners in Microminiature Packages	
Microminiature LVA Zeners	PD6201 thru PD6210
LVA Chips	CLVA43A thru CLVA100A
LVA Temperature Compensated Reference Elements	PS1300A thru PS1314A
High Performance Zeners	
One Watt Zener Diodes	1N4649 thru 1N4661
Low Current 50μA Zeners	1N4678 thru 1N4697 1N6082 thru 1N6091
Micro Zeners	PD6000 thru PD6014
Low Noise Zeners	1N4099 thru 1N4104 1N4614 thru 1N4627
Zener Diodes to MIL-S-19500/127F	1N4370A thru 1N4372A 1N746A thru 1N759A
Diodes to MIL-S-19500/437	1N5521B thru 1N5532B

VARACTOR DIODES

EIA Standard and JAN Varicaps	
Varactor Diodes to MIL-S-19500/329B	1N4801 thru 1N4815
EIA Low Voltage Varicaps	1N4786 thru 1N4800
Low Voltage, Low Leakage Varicaps	V7 thru V100
Low Voltage, Ultra-Low Leakage Varicaps	V900 thru V982
High Voltage Varicaps	V7E thru V100E
High Voltage, Ultra-Low Leakage Varicaps	V900E thru V982E
Tuning Varicaps	
1N5139 Series	1N5139 thru 1N5148
1N950 Series	1N950 thru 1N956
HI-Q Varicaps	
Standard HI-Q Varicaps	PC107 thru PC141
Ultra HI-Q Varicaps	PG107 thru PG347
Hyper "Q" Tuning Varicaps	1N5681 thru 1N5710
High Capacitance Varicaps	PQ1150 thru PQ2500

SPECIAL PRODUCTS

Assemblies	Zener, Schottky & Rectifiers
Diodes for AGC Application	PSV503 and PSV503A

TRW POWER SEMICONDUCTORS

DARLINGTONS

HIGH VOLTAGE DARLINGTON TRANSISTORS

This is a series of high voltage, high current Monolithic Darlington amplifiers for use in high speed power circuits. Typical applications include automotive ignitions, switching regulated power supplies and motor controls. High resistance to forward secondary breakdown has been diffused into this device family. The units are mounted in the EIA standard TO-3 package.

POWER SWITCHING TRANSISTORS

TRW's power switching transistors have been field proven in such applications as motor controls, uninterruptible power supplies, switching regulators, and converters. For efficient operation in all high speed switching applications, TRW power NPN transistors provide a superior mix of capabilities including: 60 to 450 volts V_{CEO}, 3 to 30 amp capability, fastest switching speeds on the market, highest resistance to secondary breakdown and proven high temperature reverse bias reliability.

ULTRA-FAST POWER DIODES

These devices are designed for use in power control and conversion circuits where high efficiency and reliability, coupled with small size and weight are requirements. The ultra-fast switching speed provides important reliability and performance advantages in switching regulators, converters and inverters that operate at 15 to 20kHz and above.

TRW POWER SEMICONDUCTORS

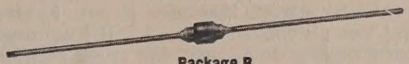
AXIAL-LEADED FAST RECOVERY RECTIFIERS

These devices are designed for use in power control and conversion circuits where high efficiency and low weight are desired. TRW proprietary diffusion and doping techniques make them the fastest high current rectifiers available. They are supplied in TRW double slug package in two axial leaded configurations.

Package A
For All 3 Watt Series



Package B
For All 5 Watt Series

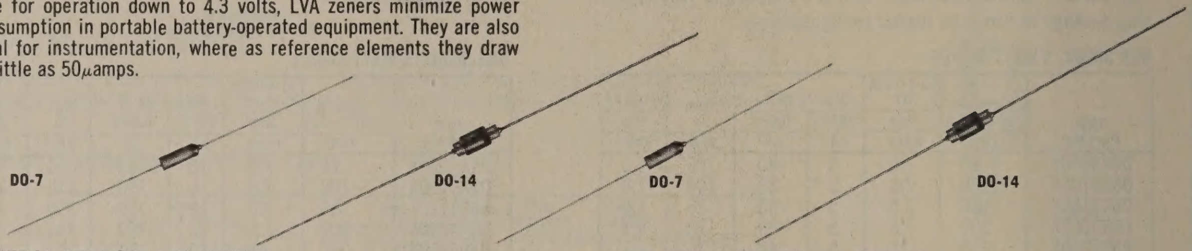
TRW POWER SEMICONDUCTORS

ZENERS

LOW VOLTAGE AVALANCHE ZENERS

LVA zeners have the sharpest knee below 10 volts. No other zener can approach their performance in the 4.3 to 10.0 volt range. Available for operation down to 4.3 volts, LVA zeners minimize power consumption in portable battery-operated equipment. They are also ideal for instrumentation, where as reference elements they draw as little as 50µamps.



GENERAL PURPOSE LVA ZENERS

Electrical Characteristics (T_{CASE} = 25°C)

Type	Nom Zener Voltage @ I_Z Vdc	Max Dynamic Impedance* Z_Z @ I_Z		Max Reverse Leakage I_R @ V_R		Max** Noise Density @ 250µA µV/√Hz
		Ohms	mA	µA	Vdc	
LVA43A	4.3	18	20	4.0	1.5

* = Maximum limits.
V_F @ 200mA = 1.0V max.
Operating and Storage: −65°C < T_A < 200°C.
Power rating is 400mW @ T_L < 50°C, derated linearly to zero @ T_L = 200°C.
Z_Z measured with 60Hz AC = 10% I_Z.

LVA CHIPS

The LVA chip is available with 5% or tighter tolerances and is 100% tested to all electrical parameters specified. The chip is fully passivated with glass covering the junction assuring both reliability, and immunity from handling damage. A large aluminum bonding pad is provided which allows lead bonding by all present techniques. Mounting to customer's substrate may be accomplished by silicon-gold eutectic or with solder or pastes which do not exceed 425°C in their usage.

Electrical Characteristics (T_{CASE} = 25°C)

LVA TEMPERATURE COMPENSATED REFERENCE ELEMENTS

LVA TC Zener

These ultra-low current temperature-compensated references are designed for use in circuits requiring the lowest possible operating current, reliability and the utmost in stability under a wide range of environmental conditions. They provide a stable reference at currents as low at 50µA and temperature coefficients as low as 0.0005%/°C.

Dynamic impedance measured by superimposing rms A.C. current equal to 10% of zener test current at 25°C.

Suffix "A" denotes −55 to +100°C temperature range for indicated maximum $\triangle V_Z$ change. The temperature range for non-"A" types is zero to 75°C. For the non-"A" types, the $\triangle V_Z$ is half of that given for −55 to +100°C.

D.C. Power Dissipation: 500mW max at 50°C ambient. Derate 4mW/°C above 50° ambient.

Storage Temperature: −65°C to +175°C.

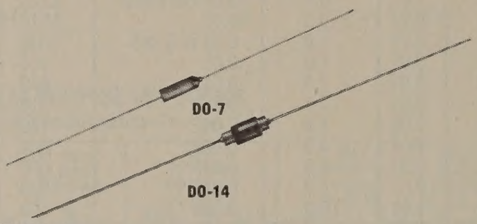
I_R max @ 80% V_Z = 0.1µA.

TRW POWER SEMICONDUCTORS

VARICAPS

EIA STANDARD AND JAN VARICAPS

These are silicon alloyed varicaps manufactured by the aluminum button alloy process and packaged in the TRW designed DO-14 package. These types are used primarily in automatic frequency control, voltage controlled oscillators, carrier amplifiers, voltage delay lines, and other applications where unusually low reverse leakage is required and moderate Q's and working voltages are acceptable. These types are recommended for military applications.



HI-Q VARICAPS

The combination of high Q, high voltage, and excellent tuning characteristics makes this series ideal for all types of electronic tuning applications. These types have also been widely used for harmonic generators (to 5 watts RF input and 1.2GHz output frequency). Available in DO-14 or DO-7 package.

ULTRA HI-Q VARICAPS

This series of devices has been developed for applications where extremely high performance is required. The combination of square-law capacitance change characteristics and extremely high Q's makes this series ideal for high frequency harmonic generation. Suitable for military and industrial applications.

NOTES

[1] Available but not recommended for use in new design.

[2] Package options are available.

[3] Rated for AM service.

[4] Linear Hybrid Amplifier.

[5] Low Noise Transistor.

[6] Linear Class A Transistor.

[7] Mobile Radio Hybrid Amplifier.

[8] 22V operation also available.

[9] Rated for Pulsed Power Operation.

NUMBER ONE IN SEMICONDUCTOR ACCESSORIES

Heat Sinks and Semiconductor Accessories

Heat Sinks ①

DIP HEAT SINKS One piece heat sinks for 14 and 16 pin integrated circuits. 6020A clips securely into place requiring no mounting hardware or epoxy. Other styles bond to DIP with epoxy, require no extra board space, and may be added after assembly.

PART NO.	FIG.	CASE STYLE	NOMINAL SIZE			TR② °C/W
			LENGTH	WIDTH	HEIGHT	
6010B	A	DIP	.750	.604	.212	55
6011B	B	DIP	.750	.250	.190	65
6012B	B	DIP	.730	.250	.190	65
6020A	C	DIP	1.000	.725	.500	40

TO-5 ENCAPSULATING HEAT SINKS Two piece heat sinks for positive retention under shock and vibration. Top and body grip transistor flange for maximum heat transfer.

1101A	D	TO-5	.500 HEX	.390	10
2205B	E	TO-5	.812 DIA	.340	41
2211B	E	TO-5	.625 DIA	.310	49
2215B	E	TO-5	.750 DIA	.350	37

TO-5 ECONOMY PRESS-ON HEAT SINKS One piece light weight coolers. May be installed with no special tools after board assembly.

1115B	F	TO-5	.375 DIA	.400	68
1116B	F	TO-5	.351 DIA	.370	18*

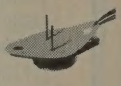
Consult Thermalloy catalog for dimensions. MIL SPEC parts available.

INSUL-COTE Insul-Cote is a neatly packaged Thermalfilm or mica insulator PRE-COATED with Thermalcote thermal grease. Available in individual packets or high volume "Ammo Pack" for use with Thermalloy's Insul-Cote dispenser. Below is a partial listing of Insul-Cote Insulators. For case style consult table above.

INSUL-COTE WITH THERMALFILM I	INSUL-COTE WITH .002/.003 MICA
43-03-1AP 43-66-1AP	56-03-2AP
43-03-2AP 43-66-2AP	56-66-2AP
43-03-3AP 43-77-2AP	56-77-2AP
43-03-4AP 43-77-9AP	



For other INSUL-COTE pre-coated insulators, individual packets, or production dispenser, consult factory.

MOUNTING PADS Prevent heat damage during soldering, facillitate board clean-up, prevent solder bridges, assure uniform device height, and simplify board repair. Designate material and color as suffix to part no. Materials: (-N) Nylon, or (-DAP) Diallyl Phthalate. Example: 7717-N RED

CASE STYLE	PART NO.	LEADS	O.D.	THK
TO-5	7717-4	4	.375	.075

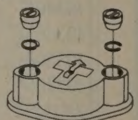
EPOXY .05 in-line to TO-5	7717-2	3	.305	.125

TO-3 COVER Insulating cover for TO-3 transistor includes lock washers for electrical connection of mounting screws to collector, test probe hole, and screw covers. Available in white glass filled nylon, Part No. 8903NW, or 94V.O UL APVD BLACK THERMOPLASTIC POLYESTER, Part No. 8903VB.



THERMALCOTE — a superior thermal point compound. Improves heat transfer across interface.

1 oz. tube	Part No. 249
2 oz. jar	Part No. 250
1 lb.	Part No. 251

CUSTOM FABRICATED EXTRUDED HEAT SINKS Industry standard extrusion profiles are immediately available from Thermalloy stock. Many additional shapes are available at no tooling charge on a minimum order basis.

EBR EPOXY BRIDGE RECTIFIERS

- **Controlled Avalanche series has 250V, 450V, 650V and 850V minimum avalanche voltages (V_{BR})**
- **Non-controlled Avalanche series with 50V, 100V, 200V, 400V, 600V and 800V, and 1000 (V_{RRM})**
- **Fast recovery series with 200 nanosec. max. reverse recovery (t_{rr}).**

The EBR bridge rectifiers combine economical cost, high reliability and circuit-to-case electrical isolation. They are available in a wide range of current and voltage ratings.

SCHOTTKY BARRIER RECTIFIERS

1A, 3A, 5A, 15A, 25A, 30A and 40A

- 20V, 30V and 40V (V_{RRM})
- Extremely fast recovery
- Very low forward voltage drop

With very low forward voltage drop and fast switching time, this family of Schottky rectifiers are ideally suited for application in low voltage computer power supplies, free-wheeling diode applications, flyback diode applications and polarity protection in high speed switching circuits.

SCHOTTKY BARRIER RECTIFIERS
1A, 3A, 5A, 15A, 25A, 30A and 40A

The current flow in a Schottky barrier rectifier is due to majority carrier conduction and is not affected by reverse recovery transients due to stored charge and minority carrier injection as in conventional PN diodes.

The Schottky barrier rectifier may be considered for purposes of circuit analysis, as an ideal diode in parallel with a variable capacitance equal in value to the junction capacitance.

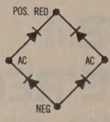
VARO

VARO SEMICONDUCTOR, INC.

DEPT. EM, P.O. BOX 676, 1000 N. SHILOH, GARLAND, TEXAS 75040 (214) 272-4551 TWX 910-860-5178

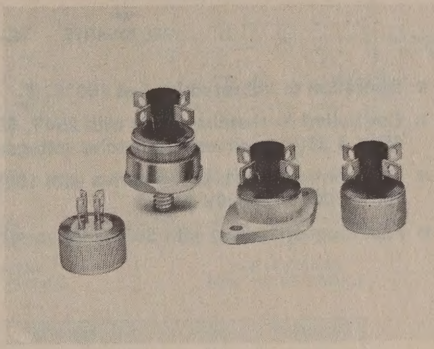
IBR®



SILICON AVALANCHE INTEGRATED BRIDGE RECTIFIERS

10 AMP & 25 AMP SINGLE PHASE, FULL WAVE

- **Operation to full rated load at 100°C, T_C**
- **250V, 450V, 650V & 850V minimum avalanche voltages (V_{BR})**
- **Fast recovery series with 200 nanosec recovery time (t_{rr})**
- **2000 V minimum circuit-to-case isolation.**



The IBR offers full wave rectification in a rigidly constructed, hermetically sealed, welded package. The controlled avalanche characteristics permit the use of lower PRV safety factors for junction protection from transient over voltages. Proper heat sinking allows great flexibility in DC output current ranges.

These characteristics plus the electrically isolated case allows the IBR to be used in applications where space, current and cost requirements have previously not allowed the use of semiconductors.

Three mounting options available, press-fit, stud mount, TO-3 outline flange.

MAXIMUM RATINGS @ 60 Hz RESISTIVE AND INDUCTIVE LOAD, $T_A = 25°C$ (UNLESS OTHERWISE SPECIFIED)

TO ORDER OPTIONAL MOUNTS OR TERMINALS

Flag Terminals: Standard .187″ flag terminals on all 25A and 36A devices. Optional at no charge on 10A and 15A devices. Specify by adding "F" to Part No.

Large .250″ flag terminals optional at no charge. On 25A and 36A devices, add "L" to Part No. Example, VT200L. On 10A and 15A devices, add "L" instead of "F." Consult factory for mounting adaptor price adders.

HIGH VOLTAGE DIFFUSED SILICON RECTIFIERS

VA

VB, 1N4441

VG

Varo high voltage and high voltage fast recovery time diffused silicon rectifiers are designed for industrial and commercial applications that require high reliability at an economical cost.

These rectifiers offer high voltage ranges in minimum-sized, epoxy-encapsulated packages with low leakage current. All ratings are obtained without the use of special heat sinks or mounting techniques (except VC Series).

They are designed to withstand 500 G's shock and vibration of 100 Hz with a peak acceleration of 10 G's.

Applications: television receivers, electrostatic power supplies, electrostatic copiers, electrostatic air filters and precipitators, cathode ray tube power supplies, transmitters, and microwave ovens.

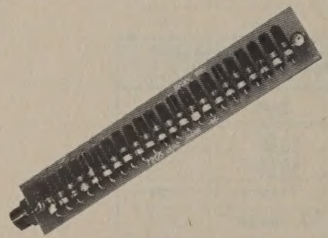
HIGH VOLTAGE RECTIFIERS FOR X-RAY APPARATUS



The required peak reverse voltage determines the number of individual diode packages used in series for the completed, unencapsulated rectifier. Each diode package contains a stack of controlled avalanche chips. In order to achieve the rated voltage and current, the diodes should be submerged in Shell Diala Oil AX electrical insulating oil or equivalent. The diodes used, Varo type H463 may be purchased separately.

MULTIPLIER DIMENSIONS IN INCHES. CONSULT FACTORY FOR COMPLETE MULTIPLIER INFORMATION.

Westinghouse Power Semiconductors. . .

Rectifiers — 1 to 3,000 amperes, up to 4,000 volts—including fast recovery and military types.

S-1 Axial Lead Mount Rectifiers—1, 1.5 and 3 ampere ratings; 50 to 1000 volts.

Modular Single Phase Rectifier Assemblies—2, 6, 10 and 25 ampere ratings in three package sizes from 50 to 1000 volts.

S-2 .190" - .250" Stud Mount Rectifiers—Over 24 different series with current ratings from 3 to 70 amperes and with voltage ratings from 50 to 1000 volts.

S-3 .375" - .750" Stud Mount Power Rectifiers—100 to 550 ampere current ratings; voltage ratings from 50 to 4,000 volts. Several military (JAN) series also available.

S-4 Disc Package Power Rectifiers — 300 to 3,000 amperes in four package sizes with voltage ratings from 50 to 3,000 volts.

S-5 Fast Recovery Stud Mount and Disc Package Rectifiers—80 to 1,600 amperes with voltage ratings from 50 to 2,500 volts. Reverse recovery times range from 1.5 to 5.0 μsec.

Thyristors (SCRS) — 10 to 2,000 amperes, up to 3,000 volts —including high speed, inverter types.

S-6 .250" - .750" Stud Mount SCRS—10 to 350 amperes with voltage ratings from 50 to 2,400 volts.

S-7 Disc Package Power SCRS—125 to 2,000 amperes in four package sizes with voltage ratings from 50 to 3,000 volts.

S-8 Inverter Type "Fast Switching" Stud Mount SCRS —40 to 300 amperes with voltage ratings from 50 to 1,200 volts and turn-off times from 10 to 50 μsec.

S-9 Inverter Type "Fast Switching" Disc Package SCRS —100 to 700 amperes with voltage ratings from 50 to 1,800 volts and turn-off times from 10 to 100 μsec.

S-10 Reverse Blocking Diode Thyristor (RBDT)—A two-terminal PNPN thyristor switch with high di/dt and fast turn-on capability—22 ampere stud mount and 125 ampere disc package with voltage ratings from 600 to 1,000 volts.

NPN Power Transistors — 1 to 30 amperes, up to 250 volts —industrial and "hi-rel" types.

S-11 TO-3/TO-66 NPN Transistors—1 to 30 amperes, up to 140 volts.

S-12 .250" - .312" Stud Mount NPN Transistors—6 to 30 amperes, up to 250 volts; noted for their high reliability performance.

Assemblies — .65 to 7,500 amperes, up to 688,000 volts.

S-13 Power Assemblies Utilizing Stud Mount Rectifiers and/or SCRS—Over 2,000 types in various circuit configurations, 12 to 1,670 amperes, and 50 to 2,000 volts; natural convection or forced air cooling.

S-14 Power Assemblies Utilizing Disc Package Rectifiers and/or SCRS—100 to 7,500 amperes and 50 to 3,000 volts in various circuit configurations; natural convection air, forced air, and water cooling.

S-15 High Voltage Rectifier Stacks—Fully compensated with current ratings from .65 to 324 amperes and voltage ratings up to 688 KV. Various circuit configurations; cooling is by natural convection, forced air or by oil.

Call or write Westinghouse today for the information you need. Please refer to the S-1 through S-15 codes when requesting data.

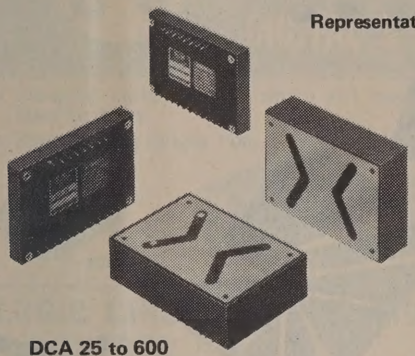
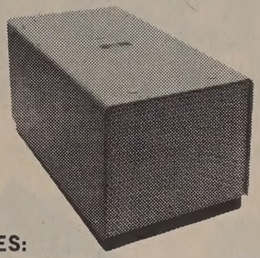
BULOVA® SERVO PRODUCTS

DC SERVO AMPLIFIERS 25 to 1000 WATTS

Representative Configurations



DCA 25 to 600



DCA 1000

FEATURES:

- Adjustable Gain
- Current Limiting
- Voltage or Current Feedback
- Wide Bandwidth
- Low Cost

DESIGNED TO DRIVE:

- DC Torque Motors
- Low Inertia Motors
- DC Servo Motors
- Deflection Coils

SPECIFICATIONS (Nominal @ 25°C)	DCA 25	DCA 25/60	DCA 50/60	DCA 200	DCA 300	DCA 300/60

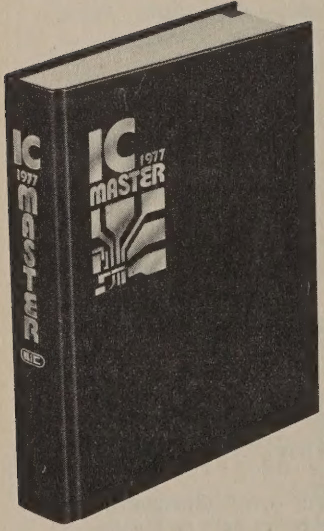
WHEN THE CHIPS ARE DOWN...

THE NEW 1977 IC MASTER PAYS OFF!



The new IC MASTER is the ultimate IC source book.

It lists virtually every IC device manufactured in the United States.

The IC MASTER is the easy, sensible means of narrowing down your IC choices quickly, accurately and systematically. All information is cross-referenced and indexed for rapid problem solving and device selection. And, additionally, the MASTER is updated three times yearly by accumulative supplements.

THE FORMAT OUTLINED:

- **FIVE MASTER SELECTION GUIDES** — 84 companies' IC's organized by type, function, key parameters
- **OVER 1,000 PAGES OF TECHNICAL INFORMATION** — Provided directly by manufacturers covering 17,000 IC's
- **ALTERNATE SOURCE DIRECTORY** — The only industry-wide, pin-for-pin version available
- **MILITARY PARTS INDEX AND CROSS REFERENCE CHART** — Identifies all IC's with JAN qualification
- **MILITARY DEVICE TESTING TABLE** — List companies that screen to Mil. Std. 883
- **MILITARY PARTS INDEX** — The first functional guide to JAN qualified parts
- **PART NUMBER INDEX** — Parts from 84 manufacturers, in numerical sequence
- **APPLICATION NOTE DIRECTORY** — Digest of currently active application note material
- **PRODUCT INDEX** — Provides alphanumeric listing of 84 manufacturers' lines
- **PART NUMBER GUIDE** — Instantly decodes each company's part numbering system
- **MANUFACTURERS AND DISTRIBUTORS DIRECTORY**

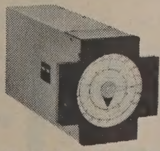
Servo Indicators
Servo Actuators
Servo Repeaters
Two Speed Servos
Servo Computers
Data Transmission Systems
Computer Interface Systems
Nuclear Control Rod Indicators
Analogue to Digital Converters
Special Control Systems
Process Controllers

- Units available which will meet applicable MIL Specifications.
- Devices designed to operate with A.C., D.C., synchro or resolver command signals.
- All units feature self-contained transistorized high reliability electronics and power supplies.
- Units now in use on numerous systems involving:

SIMULATORS	Missile Tracking	Aircraft Instrumentation
Fire Control	Ground Support	Missile Instrumentation
ASW	High Accuracy Positioning	Stable Platforms

- Special systems can be designed in accordance to your detailed specifications. CTC will also design **"Interface"** equipment to integrate major control systems.

INDICATORS



CS-109 Dual Pointer Indicator

Bearing Indicator

Simulated Altimeter

Although CTC is best known for its system engineering, a most significant part of the company is in the field of CUSTOMIZING of electronics and electromechanical assemblies for control systems applications. By using off-the-shelf modules we can accomplish such MODIFICATIONS in a short time and in most cases without extra cost.

ACTUATORS

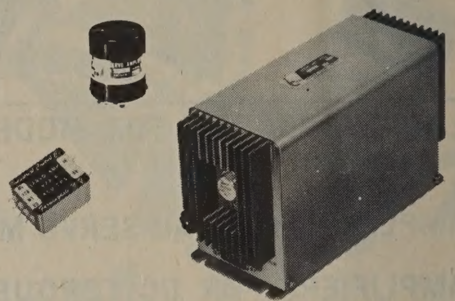
SERVO COMPONENTS

INSTRUMENTS, AMPLIFIERS and ACCESSORIES

FOR MILITARY AND INDUSTRIAL CONTROL SYSTEMS

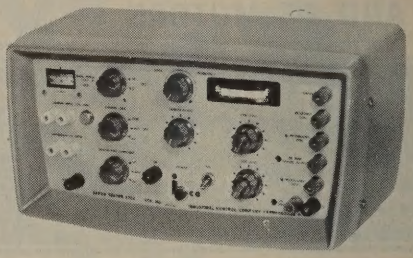
SERVO AMPLIFIERS

- DC, pot and synchro inputs
- 60 and 400 ~ outputs
- 972A (.5 cu in, 9 watts), to 1078A (1 KW DC)
- Solid-state and magnetic amplifiers



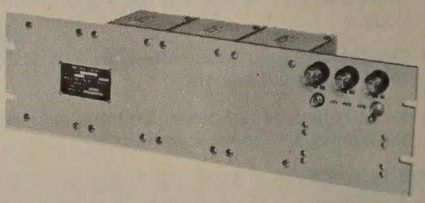
SERVO TESTERS

- 100C, general purpose use
- 103A, prod and field test
- Frequency and transient response
- For DC and AC servos



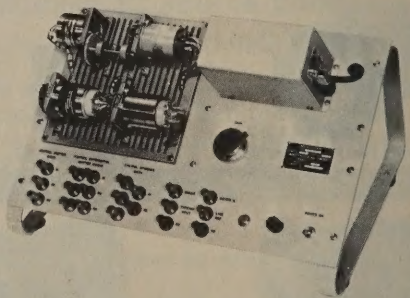
SYNCHRO AMPLIFIERS and FREQUENCY CHANGERS

- 929R, 90V./line, 400 ~ stators
- 820C, 90V./line, 60 ~ stators
- Buffer CX's from CT and TR loads
- Electromechanical and solid-state



SERVO DEMONSTRATORS

- Laboratory experiments
- Industrial training
- Synchro and pot data
- 60 and 400 ~ models



SYNCHRO DIRECTORS

- Generate 1 and 36 speed stator voltages
- Constant velocity and harmonic motion modes
- Computer programmed
- 60 and 400 ~ stator outputs

Write for Catalog of our COMPLETE Servo Line.

INDUSTRIAL CONTROL COMPANY

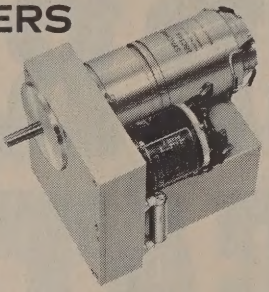
SERVO SYSTEMS

STANDARD MODULES or SPECIALS

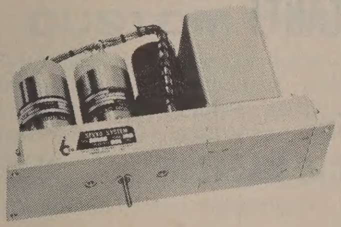
MIL-GRADE AND FAST DELIVERY

High Torque SYNCHRO REPEATERS



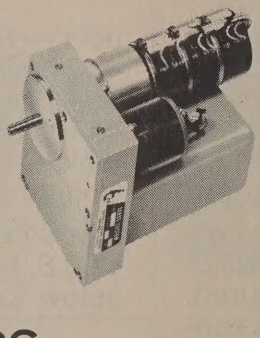
- 770 Series for 400 ~
- 847 Series for 60 ~
- 8′ error
- 300 oz in shaft torque
- 117V. line power

Two Speed SYNCHRO REPEATERS



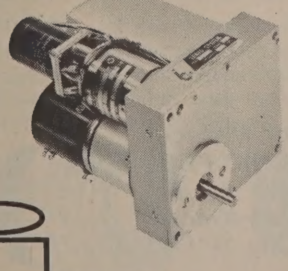
- 1038 Series for 400 ~
- 921 Series for 60 ~
- 16, 25 and 36 speed
- Shafts at high and lo speed
- 117V. line power

DC and AC POT FOLLOWERS



- 900 Series
- DC, 60 or 400 ~ inputs
- 1, 3 or 10 turn pots
- Torques to 300 oz in
- 117V. 60 or 400 ~ power

Precision DC VELOCITY SERVOS



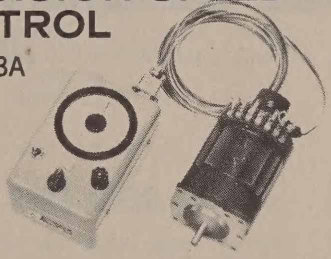
- 982 Series for 60 ~
- 983 Series for 400 ~
- ±10V. DC command
- 117V. line power
- Wide range of torques and speed

3 Axis SERVO INDICATOR

- type 909A

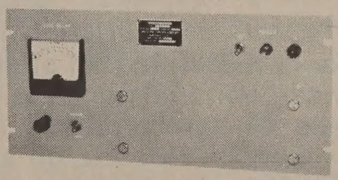
Bi-Directional PRECISION SPEED CONTROL

- type 923A



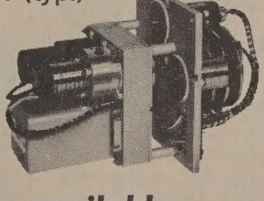
Process Control DELAYED SIGNAL GENERATOR

- type 849B



Custom Assemblies TO CUSTOMER SPECS.

- type 869A (typ.)



Modifications from Standards readily available.

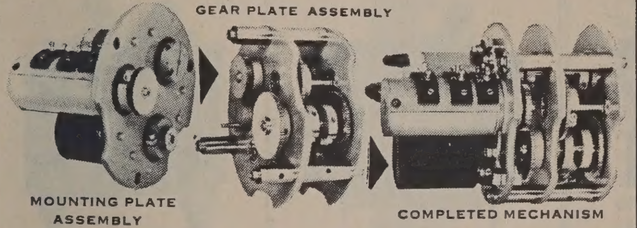
SERVO MECHANISMS & COMPONENTS

PREDESIGNED MECHANISMS

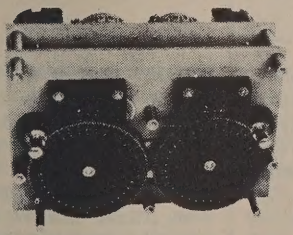
A complete line of off-the-shelf components for assembling an unlimited variety of geared mechanisms. Gear ratios to 78,125:1, zero-backlash spring-loaded gears and torque-limiting slip clutches are featured. Assembled units meet design and materials requirements of MIL-E-5400 and MIL-E-16400.

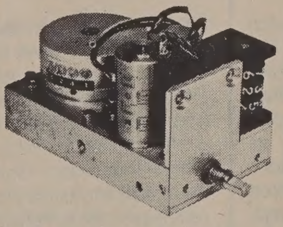


For complete data and catalog of stocked components, request Bulletin 102.

CUSTOM DESIGNS

PMC specializes in design and manufacture servo mechanisms and mechanical modules to user requirements for airborne, ground support, communications, fire control and other critical applications. The units shown below are typical of the mechanisms designed and manufactured for military and industrial equipments.

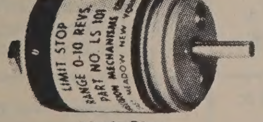




Short lead time delivery on both prototypes and production quantities.

ADJUSTABLE LIMIT SWITCHES & STOPS

0-10, -20, -40 revolutions without snap action switch, 0-25 revolutions with snap action switches actuated just before mechanical stops. All models infinitely adjustable with single external screw. SPDT snap action switch rated 7A, 250V.



Limit Stop
Series LS 100
5/8 and 7/8″ dia.

Limit Stop And Switch
Series LS 300
1 5/16″ dia.

For complete data, request Bulletins 103 and 104

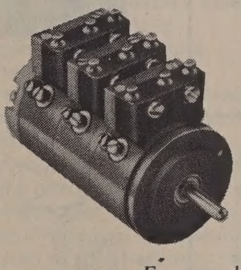
CAM SWITCHES

Adjustable-In-Motion

PMC's patented cam switch design incorporates in a single component all the functions of a conventional plate cam, cam follower and snap-action switch, eliminating the need for separately-mounted cam mechanisms and switches and their associated hardware. Externally-adjustable dwell angles can be set to any position with respect to the shaft. All models available as single- or multi-switch types, with ganged switches independently adjustable.

Model CS 402 Miniature Cam Switches

Miniature units designed and manufactured to military and aerospace specifications.

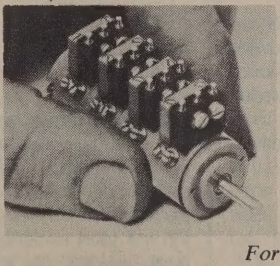


Diameter: 1-1/16″, equivalent to to BuOrd Size 11
Length: 0.8″, one switch, plus 0.5″ per switch
Dwell Angle: 3° to 357°
Switch: SPDT
Rating: 5A, 250VAC, 30VDC
Multi-Switch Models: up to 10 switches
Shaft: 0.125″ dia.

For complete data, request Bulletin 106

Model CS 601 Subminiature Cam Switches

Subminiature units for airborne, space vehicle and other applications where size and weight are critical.

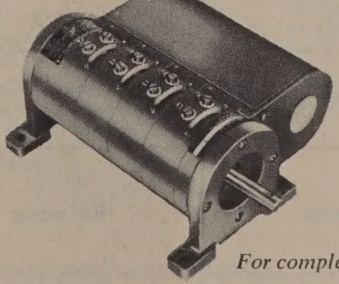


Diameter: 0.75″, equivalent to BuOrd Size 8
Length: 0.730″ one switch, plus 0.437″ per switch
Dwell Angle: 3° to 357°
Switch: SPDT
Rating: 7A, 250VAC, 30VDC
Shaft: 0.125″ dia.
Multi-Switch Models: up to 8 switches

For complete data, request Bulletin 109

Model CS 501 High-Power Cam Switches

Industrial types for control, cycling and sequencing of machine operations. End- or side-mounting, with or without switch covers. Dials permit visual adjustment of switching points and dwell angles.



Dwell Angle: 5° to 355°
Diameter: 3.5″
Length: 3″ one switch, plus 1.5″ per switch
Shaft: 0.5″ dia.
Switches: SPDT, DPDT. Special types to requirements.
Ratings: to 25A and 600 V, inrush current to 75A.

For complete data, request Bulletin 108

AIRPAX™ Electromagnetic Circuit Protectors and Circuit Breakers

■ Airpax magnetic circuit protectors and circuit breakers have been used for many years to solve the protection problems inherent with fuses and thermal breakers. Magnetic protectors are the acknowledged standard in military equipment, computer systems, ground fault personnel protection systems, and other industrial equipment. Airpax magnetic protectors and breakers eliminate the replacement problem inherent with fuses. The minimum trip current is not affected by temperature extremes, as is the case with fuses and thermal breakers. Precision protection required for electronic equipment is provided.

	AP/UP	203	APG/UPG	APL/UPL
MODEL DESIGNATION			AIRPAX ELECTRONICS CAMBRIDGE, MD.	AIRPAX ELECTRONICS CAMBRIDGE MD.
DIMENSIONS				GENERAL DESCRIPTIONS AND APPLICATIONS	Types AP and UP are sealed electromagnetic circuit protectors qualified to the requirements of specification MIL-C-39019. AP and UP protectors will withstand up to 100G shock applied repeatedly in any plane, as well as 10G vibration from 10 to 2000 Hz under full load, which makes their use practical in mobile equipment. All will operate at rated value between —40°C and +100°C. For more information, request Bulletin 2001.	Combines over-current protection with ON-OFF switch and pilot light functions, for use in high quality industrial, medical, and military equipment where reliable protection and attractive appearance are demanded. Optional colors, plus a single rocker actuator for multipole assemblies, provide ease of operation and panel uniformity. An optional illuminated handle can be used to indicate circuit condition. Snap-in front panel mounting provides economy and simplifies installation. Optional flush mounting also available. For more information, request Bulletin 2009.	APG/UPG protectors are suitable for use in any situation where low cost precision operation is required. Multipole assemblies have a single toggle handle — a unique feature which simplifies mounting. Also available with rocker arm and thumbwheel actuators for improved panel appearance, as well as a panel seal version for marine or military environments. For more information, request Bulletin 2003.	APL/UPL circuit protectors are ruggedly constructed to provide dependable protection under the most severe conditions of use in industrial, military (QPL to MIL-C-55629), marine, or any application where precision protection is required. The versatility of the APL line makes it ideal for special purpose applications. For more information, request Bulletin 2002.

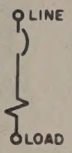
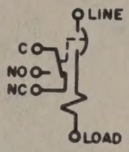
AIRPAX™ Electromagnetic Circuit Protectors and Circuit Breakers

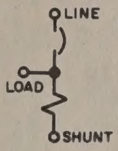
All Airpax Circuit Protectors and Circuit Breakers are available in many mechanical and electrical configurations to provide maximum versatility for the designer. The following internal circuits are available and can be combined in multipole units.



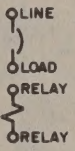
SERIES TRIP
A SPST two-terminal device with the sensing coil and contacts in series with the load being protected.



SERIES TRIP PLUS AUXILIARY SWITCH
A SPDT auxiliary switch is added to the series trip unit to provide auxiliary switching functions.



SHUNT TRIP
A connection is brought our from the internal coil-contact junction to a third terminal, permitting a shunt across the trip coil.



RELAY TRIP
Coil and contact leads are brought out to separate pairs of terminals. This configuration permits the overload sensing coil to be placed in a circuit which is electrically isolated from the trip contacts.

205	209
	The 205 provides improved electrical performance plus a dust-proof enclosure. All openings in the case (including arc blowout vent and handle) have been sealed with resilient rubber and mylar. Case sections are of tongue and groove construction to provide an overlapping closure. Ideal for application in extremely harsh environments. For more information, request Bulletin 2002.	209 molded case circuit breakers present to electrical contractors, O.E.M.'s, and panel and equipment builders a more compact, competitive unit. Front or back connected terminal styles. Readily mounted in switch boards, panel enclosures, panel boards, or junction boxes. Family consists of the 209, a labeled circuit breaker; 219 manual motor controller; and 229 appliance controller. For more information, request Bulletin 2012

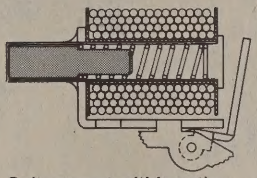
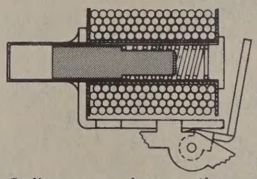
Hydraulic-Magnetic Time Delay Used in Airpax Circuit Protectors and Circuit Breakers

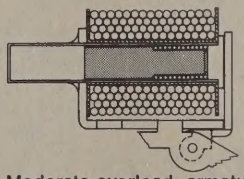
Unlike fuses and thermal circuit breakers, magnetic protectors employ a solenoid with an iron slug moving in oil, to provide an inverse time delay. The oil viscosity changes with temperature, causing the trip time of a magnetic protector to decrease as temperature increases and increase as temperature decreases, but the trip current remains unchanged. This makes possible accurate protection throughout the ambient temperature range without derating the protector.



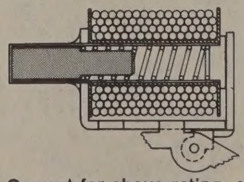
Coil current within rating.



Coil current above rating, moderate overload.



Moderate overload, armature operates after delay.



Current far above rating, armature trips without delay.

GENERAL CHARACTERISTICS

Trip Free
Airpax circuit protectors and circuit breakers will trip open on overload, even when forcibly held on. This prevents the operator from damaging the equipment by restraining the handle in the ON position.

Trip Indication
The operating handle moves forcibly and positively to the OFF position on overload.

Shock
Protectors will withstand shocks of 100G without tripping, while carrying full rated current, when tested per MIL-STD-202C, Method 213, Test Condition 1.

Vibration
Protectors will withstand 10G without tripping, while carrying full rated current, when tested per MIL-STD-202C, Method 201A.

Ambient Operation
—40°C to +85°C.

Insulation Resistance
100 megohms minimum at 500V dc.

Dielectric Strength
1500 ac at 60Hz.

Endurance
When the protector is operated as a switch carrying full rated current, at a maximum rate of 6 operations per minute, the operating life will exceed 10,000 operations.

ALCOSWITCH®

WORLD'S SMALLEST SWITCHES FOR INDUSTRIAL APPLICATIONS

A truly subminiature switch family designed specifically for printed circuit application. Not merely a diminution of existing miniatures, but a complete new series designed from the bottom up for today's subminiaturization standards. These switches contain the most-asked-for features as outlined below.

- UNIFORM 0.1" SPACING
  Between all terminals and anchor pins.
- GOLD PLATED CONTACTS
  Most needed for logic circuitry.
- CASE MATERIAL
  Flame retardant Diallyl Phthalate.
- HIGH TORQUE BUSHING
  Withstands mechanical abuse.
- ANTI PUSH-IN TOGGLE
  Prevents possible damage to inner mechanism.
- CLOSER SPACING ON PANELS
  Allows 3 single pole switches per linear inch.
- LOWER DENSITY
  Allows clearance on PC boards spaced on 1/2" centers.
- SLIDE SWITCH DESIGN
  Utilizes toggle action design.
- COMPLEMENTARY PUSHBUTTONS
  Available in many styles and configurations.
- DIP SWITCHES TOO!
  This completes the line of switches for PC use.

We're late comers in DIPS, but, we've got one of the largest variety including, rockers, slides, pianos and SPDT models. All with high quality design features, excellent tactile feel and in stock for immediate delivery.

Please call (617) 685-4371 or Telex 710 342-0552 and ask for Customer Service for selection assistance; prices, samples and a copy of our 76-page catalog.

ALCOSWITCH®

MINIATURE SWITCHES WITH THE MOST WANTED FEATURES

When you compare price you must compare these outstanding features! Remember these are included "AT NO EXTRA COST".

- MOLDED-IN TERMINALS
  Eliminates costly epoxy seals.
- FINE SILVER CONTACTS
  Provide a high 6 Ampere rating.
- GOLD FLASH ON TERMINALS
  Prevents oxidation to ease solderability and extend shelf life.
- CASE MATERIAL
  Flame retardant Diallyl Phthalate.
- HIGH TORQUE BUSHING
  Withstands mechanical abuse.
- LEVER STOP DEVICE
  Prevents push-in of toggle and avoids possible damage.
- NEW FRAME DESIGN
  Allows use on 250VAC as well as 125VAC.
- UL LISTED
  Reference E-46765 on most models.
- ISOLATION BARRIERS
  Inside as well as outside.
- HIGHEST QUALITY
  Designed for maximum reliability.
- NO HIDDEN COSTS
  Investigate, you'll buy ALCOSWITCH.

For additional information, quantity pricing or a Free Sample, please call our Customer Service at (617) 685-4371 or Telex 710 342-0552. Also, don't forget to ask for our latest 76-page catalog which contains complete engineering data on our full line of switches.

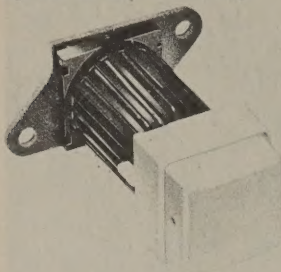
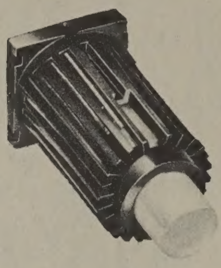
Pushbutton Switches/K500 Series

Up to 6PDT — 1 Amp





For chassis or PC board mounting only. No front panel screws. Six PDT silver alloy self-cleaning slide-action contacts. Occupies less than one square inch of panel space. Only 1½" depth behind panel. Long-life special nylon parts used throughout. Pushbutton switches can be furnished with round ⅜" diameter or ¾" square button in white (W), black (BK), red (R), yellow (Y), green (G), or blue (B). Square buttons may be engraved or hot stamped. Illuminated pushbutton switches are available using lamps which are accessible from front. Special unbased lamps in 6, 12, 24 v 1 watt are available all over the world. UL Component Recognition File E62296

SPECIFICATIONS

Contact Rating: 1 amp at 30 vdc or 0.2 amp at 115 vac (0.5 amp at 26 vdc, vac — UL Rating)

Contact Arrangement: Two, four, and six form C contacts

Life Expectancy: 10^6 mechanical; 5 x 10^4 at rated load

Ambient Temperature Range: −20°C to 60°C

Dielectric Strength: Under room conditions, 500v rms

Insulation Resistance: Under room conditions, 10^9 ohms.

Terminals: Solder lugs or PC pins

HOW TO ORDER

Your part number consists of the switch part number, color of button, contact arrangement and PC if printed circuit terminals are desired. Add letters "PC' 'at end of part number.

For example: to order a pushbutton switch with a push lock, push release function, a non-illuminated square black button, four form C contacts, and printed circuit terminals, the following part number would be used: **K560 BK-4C-PC.**

Note: Solder temperature: Max. 270°C (500°F) Solder time: Max. 5 sec.

PART NUMBERS FOR PUSHBUTTON SWITCHES

Function	Non-Illuminated		Illuminated	
	Round	Square	Round	Square
Momentary	K 500	K 520	K 600	K 620
Push Lock, Push Release	K 540	K 560	K 640	K 660
Push Lock, Reset Solenoid*	K 502	K 522	K 602	K 622

* Standard solenoid is for 24 vac or vdc (200 ohms); other coils can be supplied to special order.

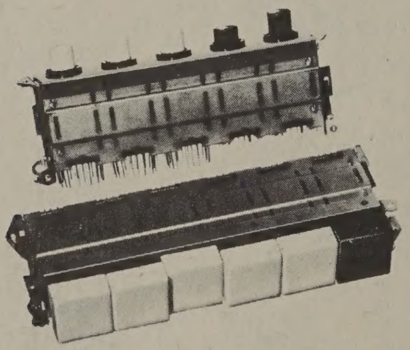
PART NUMBERS

For Incandescent Lamps and Accessories

P/N	Description
2305	6 - 7V, 1W Unbased Lamp
2321	12 - 15V, 1W Unbased Lamp
2341	24 - 30V, 1W Unbased Lamp
LTa110Z1	Lamp Inserter
Z1693	Button Remover

Multiple Switches/T596 Series

Up to 6PDT Per Station — 1 Amp



SERIES T596 MULTIPLE SWITCHES

For front panel, chassis, or PC board mounting using 4-40 screws. Up to 6 PDT silver-nickel self-cleaning slide-action contacts. Occupies less than one square inch of panel space. Only 1½" depth behind panel. Long-life special nylon parts used throughout. Pushbutton switch can be furnished with round ⅜" diameter or square ⅞" x 13⁄16" with 0.827" center-to-center spacing, in white, black, red, yellow, green, or blue buttons. Square buttons may be engraved or hot stamped. Illuminated pushbutton switches are available using lamps, which are accessible from front. Special unbased lamps in 6, 12, 24 v 1 watt are available all over the world.

SPECIFICATIONS

Contact Rating: 1 Amp at 30 VDC or 0.2 Amp at 115 VAC.

Contact Arrangement: Two, four and six form C contacts.

Life expectancy: 10^5 mechanical; 5 x 10^4 at rated load.

Ambient Temperature Range: −20°C to 60°C.

Dielectric Strength: Under room conditions, 500 v RMS.

Insulation Resistance: Under room conditions, 10^9 ohms.

Terminals: Solder lugs or PC terminals.

SWITCH CHARACTERISTICS

Switch Function	Frame Part Number
Non-lock (momentary) Push lock, push release	T596.10

STATION PART NUMBERS

Function	Non-illuminated		Illuminated	
	Round	Square	Round	Square
Non-lock (momentary)	500.1	520.1	600.1	620.1
Push lock, push release	540.4	560.4	640.4	660.4

FOR EXAMPLE, TO ORDER:

A multiple-station pushbutton switch with: Ten interlock, non-illumnated stations with white round buttons, four form C contacts, and printed circuit terminals, the following part number would be developed: (See example at right)

Note: Solder temp.: Max. 270°C (500°F) Solder time: Max. 5 sec.

THUMBWHEEL SWITCHES

INTRODUCTION

AMP thumbwheel switches provide a simple, highly reliable means of manually programming various types of electrical/electronic equipment. These miniature switches are designed for front and rear panel mounting and can be used singly or "stacked" for either individual or matrix output applications. They are ideally suited for use in machine tool and process control systems as well as test equipment, aircraft, various instruments and input data terminals. For more details, ask for AMP Catalog No.73-143.

ELECTRICAL

Outputs: Decimal, BCD and BCO. Other codes also available.
Contact Resistance (pad-to-pad): .1 ohm (max.).
Current Rating: 3 amperes (continuous); .125 ampere (switching).
Insulation Resistance (74°F [23.3°C], sea level): 1 x 10^9 ohms (min.).
Dielectric Withstanding Voltage: 500 VDC (min.).
Capacitance (between any two conductors): 5 pf (max.).

MECHANICAL

Wheel/Dial Positions: 8 and 10, standard.

Wheel/Dial Characters: White, gothic style, .18" [4.57 mm] high (max.).
Operating Force: .4 to 1.25 lb. [1.78 to 5.56 N].
Structural Plastic: Black, polycarbonate (glossy finish) or polyester (matte finish).
Protective Character Window: Clear polycarbonate.
Printed Circuit Boards: Flame retardant, glass epoxy laminate.
Contacts: Gold-over-nickel plated phosphor bronze.
Detent Spring: Phosphor bronze.
Life: 1,000,000 detent operations (min.).

ENVIRONMENTAL (MIL-STD-202)

Temperature: —40°F to + 190°F [—40°C to + 87.7°C].
Shock: 25 G in all planes.
Vibration: 10-2000 Hz (Method 204B, Condition B).

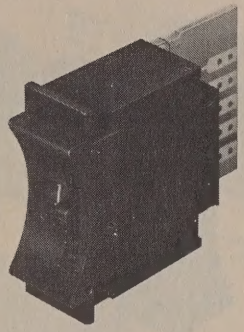
Temperature: —55°C to +85°C (Method 107, Condition A).
Shock: 10 microsecond contact opening (max.) (Method 213, 100 G sawtooth pulse).
Vibration: 10 microsecond contact opening (max.) (Method 204, 10 to 500 Hz, .06 double amplitude).
Altitude: 70,000 ft. [21 336 m] (Method 105, Condition C).

(Sealed Switch Only)

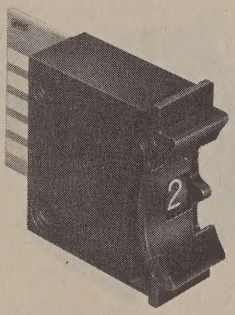
Seal: MIL-S-22710, Paragraph 4.8.14.1.
Moisture Resistance: 25 megohms (min.) (Method 106).
Sand and Dust: Method 110, Condition B.
Explosion: Method 109.
Salt Spray: Method 101, Condition B.

AMP



.500 [12.7] STANDARD

AMP .500 (12.7) standard thumbwheel switches are available as 8 or 10 position switches with outputs in decimal, BCD or BCO. They can be supplied with short or long boards and for mother/daughter board, pc connector, solderless wire or soldered wire connection. Standard housings with a glossy or fine matte finish incorporate a mounting flange to facilitate front or rear panel mounting.



.500 [12.7] SEALED AND ENCLOSED

AMP .500 (12.7) sealed and enclosed thumbwheel switches provide varying degrees of environmental protection, as required. The enclosed version employs a housing design which serves as a barrier against such contaminants as dirt and dust. The sealed version, using the same housing, also has an epoxy seal which provides protection against fumes, vapors and moisture. Both versions are currently supplied as a 10 position switch with a BCD output, but can be made available with a variety of outputs, special features and options.

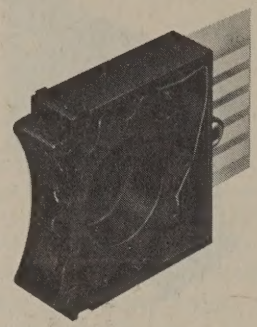
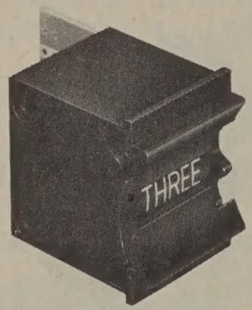
PHONE: 717-564-0100 TWX: 510-657-4110

AMP



.350 [8.89]

AMP .350 [8.89] thumbwheel switches are furnished with most of the same capabilities as the .500 [12.7] standard switch, but are intended for use where horizontal mounting space is limited or where a wider switch is unnecessary. Available outputs and options also include the same broad range as the wider switch.



MESSAGE WHEEL

AMP message wheel thumbwheel switches are specifically designed for the use of words, abbreviations or symbols to identify switch positions. Their 1" [25.4 mm] wide housings make them ideal for handling virtually any special readout requirement. The switch is presently furnished as a 10 position module with a BCD output, but can be readily adapted to accommodate any of the other decimal, BCD and BCO outputs as well as all available options.

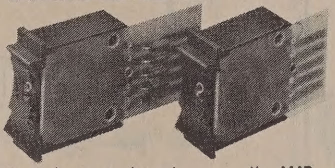
AMP EDGE Terminals
AMP Commercial Interconnection System (CIS) with "F" Posts
Soldered Wire Terminations

BOARD LENGTHS

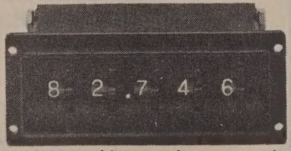


Input/output boards on all AMP switches may be supplied in two lengths. A long board is used where components such as diodes and resistors are required in the switching function and are to be mounted directly onto the board. The short board is used where no such components are needed. All interconnection methods may be used with either board length.

PROTECTIVE CHARACTER WINDOWS

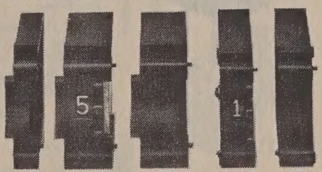
Transparent plastic windows are available on .500 [12.7] and .350 [8.89] switches. They provide protection for the wheel characters against dirt, dust and other contaminants. They are ideally suited for use in industrial environments.

SPECIAL MARKING



Special marking such as punctuation, abbreviations and symbols can be supplied on switch modules and spacers. These markings are in addition to the special markings which may be obtained on the switch wheels.

SPACERS



Spacers are available for custom stacking or assembling switch moddules. They are supplied with glossy or fine matte finishes. Material construction of the spacers is black polycarbonate (glossy finish) or black thermoplastic (matte finish).

Figure 1. Spacers for .500 [12.7] Standard & Message Wheel Switches.

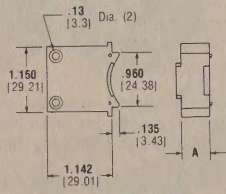


Figure 2. Spacer for .350 [8.89] Switches.

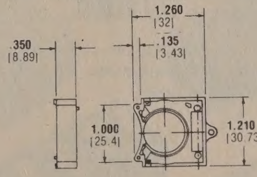

ASSEMBLY HARDWARE
When switches are purchased as individual modules, assembly hardware must be ordered separately.

FEATURES

- High Density—Low profile, compact design requires a minimum of pc board area.
- Available in standard or right angle versions.
- Simple Operation — Rocker actuators instantly change program.
- Easy Mounting—Switches can be flow-soldered directly to pc board or simply inserted into DIP headers or IC packaging receptacles.
- Economical—Board mounted switches eliminate the need for interconnection wiring to perform switching functions.
- High Reliability—Fully enclosed design protects contact surfaces from environmental hazards. Optional transparent cover is also available.
- Versatile Application — Switches furnished in various sizes, ranging from 1 to 12 positions.

DUAL-IN-LINE PACKAGE SWITCHES

The AMP Dual In-Line Package Switch provides a highly reliable, low cost means of manually programming various types of electrical/electronic equipment. This unique device is essentially a multiplicity of rocker actuated, single-pole, single-throw switches packaged in a housing with input/output leads on .100" x .300" centers and is specifically designed to be mounted on a printed circuit board. It features a very low profile, and is ideally suited for programming logic functions in computers, test equipment, telephone equipment, process control equipment, etc.

The Dual In-Line Package Switch requires no hardware for mounting and can be either flow-soldered directly to a pc board or simply inserted into AMP's DIP headers or IC packaging receptacles.

The AMP Dual In-Line Package Switch can be supplied in a wide range of sizes, from 1 to 12 positions.

DUAL-IN-LINE PACKAGE SWITCHES

AMP 7030 SERIES RECESSED CAM DIP SWITCHES

FEATURES

Low Profile above P.C. Board.

Design prevents accidental change of rocker position.

Easy to apply tape processing seal available for top of switch.

Epoxy seal on bottom combined with tape seal on top inhibit contamination of contacts during processing.

94V-0 Rated Material.

Marking on rockers provides excellent legibility for program setting and identification.

MATERIALS

Switch housing and base are 94V-0 Rated Glass Filled Polyester—color is black with white markings.

Rockers are 94V-0 Rated Unfilled Polyester — color is white with optional red markings.

Contacts are Beryllium Copper with gold over nickel plating.

Sealing Material is epoxy.

ELECTRICAL & MECHANICAL RATINGS

Contact Resistance	100 milliohms max.
Ins. Resistance	1×10^{11} ohms
Dielectric Strength	500 VDC
Cycle Life	7000 Cycles/Pole min.
Capacitance	5 picofarads
Operating Temp	0°F to 190°F
Current/Voltage Rating	24 volts @ 25 ma max. switching

AMP 7100 AND 7130 SERIES ECONOMY DIP SWITCHES

FEATURES

Economical substitute where cycle life is not critical.

94V-0 Rated Material.

Low Profile (on 7130 Series).

Marking on rockers provides excellent legibility for program setting (on 7130 Series).

Design prevents accidental change of rocker position (on 7130 Series).

MATERIALS

Switch housing and base are 94V-0 Rated Glass Filled Polyester—color is blue with white markings.

Rockers are 94V-0 Rated Unfilled Polyester— color is white with optional red markings.

Contacts are copper alloy with gold plate on contact surfaces.

ELECTRICAL & MECHANICAL RATINGS

Contact Resistance	100 milliohms max.
Ins. Resistance	1×10^{11} ohms
Dielectric Strength	500 VDC
Cycle Life	2000 cycles/pole
Capacitance	5 picofarads
Operating Temp	0°F thru 190°F
Current/Voltage Rating	24 volt @ 25 ma max. (switching)

AMP 7200 AND 7040 SERIES LED DIP SWITCHES AND MOMENTARY CAM DIP SWITCHES

FEATURES

Momentary or detented rockers available.

Switch leads and LED leads independently terminated for circuit connection versatility.

Permits rapid circuit test or fault indication.

Permits rapid program verification.

Permits Dual-In-Line Packaging of LED's.

94V-0 Rated Materials (Except Diodes).

MATERIALS

Switch housing and base are 94V-0 Rated Glass Filled Polyester—color is black with white markings.

Rockers are Unfilled Polyester—color is white.

Contacts are Beryllium Copper with gold over nickel plating.

LEDS are epoxy encapsulated GaAsp or GaP Diodes—color is red.

ELECTRICAL & MECHANICAL RATINGS

Contact Resistance	100 milliohms max.

Electrical

Circuit Current/Voltage Rating:
Non-switching — 1.0A max. @ 50 VDC
Switching — 100 ma @ 5 VDC 25 ma @ 24 VDC
Contact Resistance — 50 Milliohms (Max.) @ 50 Millivolts open circuit voltage at 10 Milliamps current

Insulation Resistance:
between adjacent closed switches — 1 x 10^9 ohms (Min.) at 100 VDC
between adjacent open switches — 1 x 10^9 ohms (Min.) at 100 VDC

Dielectric Breakdown Voltage — 500 VDC (Min.)

Mechanical

Operating Temperature — 0°F thru 190°F

Life Cycle — 2,000 switch operations (Min.)

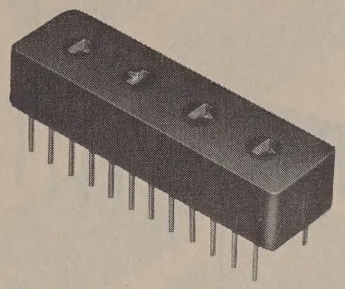
Materials

Housing and Actuator — U.L. recognized, 94V-0 rated polyester.
Contacts — Gold-plated copper-nickel alloy.

Dimensional

All dimensions are in inches unless otherwise noted.

7400 SERIES



The AMP miniature double pole, double throw switch in one to 5 position configurations is a high density, low profile, p.c. board mountable switch suitable for a wide range of logic level switching operation. A small screwdriver is used to position the actuator which is bidirectional and continuously rotatable. Each position has built-in detented action for positive positioning. All switches mounted directly to your board on a .100 Grid pattern can be either flow soldered or inserted into AMP DIP receptacles.

FEATURES

- High density, low profile (only .250″ high)
- Housings made of U.L. recognized, 94V-0 rated polyester material
- Simple operation — screwdriver actuated
- Positive detented action
- Positive control — alternate "off" position rotates in either direction
- Economical — mounts directly to p.c. board eliminating need for costly interconnect wiring
- Choice of sizes from 1 to 5 positions (Four position presently available. Other sizes will be proposed upon request.)

AMP

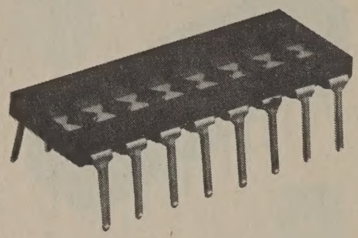
PROGRAMMABLE DUAL-IN-LINE (DIP) SHUNT

7600 SERIES



FEATURES

- Very low profile — .077″ [1.96 mm] above board
- Low cost tamper-proof programming
- Housings made of UL recognized, 94V-0 rated, glass-filled thermoplastic polyester
- Large current capacity — 5 amperes (one conductor)
- Excellent strap visibility for determining state of operation
- Cut straps can be reconnected: by solder bridging, then re-opened; by use of solder wick
- Suitable for DIP handling techniques
- No extra space required for end-to-end mounting
- No loose pieces
- Ideal for volume requirements of similar programs
- Can be supplied pre-programmed
- Variety of marking and color coding possibilities

Dimensioning:
All dimensions in inches and millimeters. Values in brackets are metric equivalents.

DEPT. EM, HARRISBURG, PA 17105
PHONE: 717-564-0100 TWX: 510-657-4110

AMP's programmable DIP shunt provides a means of manually programming various types of electrical/electronic equipment. This unique device is basically a multiplicity of electrically conductive straps packaged in a housing with input/output leads on .100″ x .300″ [2.54 mm x 7.62 mm] centers. The straps can be retained intact or cut to produce the desired "closed-circuit" and "open-circuit" conditions. The DIP shunt is specifically designed to be mounted on a pc board and is ideally suited for achieving circuit crossovers on single-sided pc boards and can be used for addressing computer terminals.

The AMP programmable DIP shunt is currently available in 2 thru 12-positions, but other sizes can be supplied upon request. A hand tool is available for strap cutting.

ELECTRICAL

Current Rating — 5 A for 20° Rise Above Ambient (one conductor per shunt)

Insulation Resistance — 1 x 10^{11} Ohms (min.) @ 100 VDC

Dielectric Withstanding Voltage — 1000 VDC (min.)

Capacitance:
(Between Adjacent Straps) — 2 pf.
(Across Cut Strap) — 5 pf.

PHYSICAL AND ENVIRONMENTAL

Temperature — MIL-STD-202, Method 102A, Test Condition D [—65°C thru +125°C]

Moisture Resistance — MIL-STD-202, Method 106D

Terminal Strength (Bend Test) — MIL-STD-202, Method 211A, Test Condition B (5 bending operations)

Solderability* — AMP Specification No. 209-11

Resistance to Soldering Heat* — MIL-STD-202, Method 210A, Test Condition E, Procedure 2

* Cut straps can be reconnected by solder bridging. Solder bridging recommendations are:
—Use low temperature solder.
—Use solder tip approximately 1/32″ [0.79 mm] dia.
—Do not let solder tip come in contact with plastic material.

MATERIALS

Housing — UL Recognized 94V-0 Rated, Glass-Filled Thermoplastic Polyester; Color, Black (other colors available)

Metal Parts — Brass with Electroplated Tin Finish (gold plated I/O legs are optional)

The AMP Printed Circuit Board Rotary Switches are 16 pin DIP packages with 4 P.D.T. switches which are operated by encoded cams. A shaft with screwdriver slot, lever, or extension turns the cam in either direction to the desired "positive detent" setting. The setting may be outwardly indicated by a pointer. The switches are especially designed for printed circuit board mounting and are completely compatible with the latest packaging techniques. Input/output pins are spaced on .100" x .300" centers, allowing them to be mounted in a board by the normal methods used for 16-lead IC's.

FEATURES

- 16 Pin DIP
- 8421 Encoding with Complement
- 4 Pole Double Throw
- Positive Detent
- PC Mounted with Edge Actuation
- Optional Actuation Methods

ELECTRICAL SPECIFICATIONS

PULL TO SET SWITCHES/MATRIX SLIDE SWITCHES ELECTROMECHANICAL RELAYS

PULL-TO-SET SWITCH

FEATURES

- Economical low cost switching.
- Modular design for maximum flexibility.
- Choice of board mount assemblies or individual switches to mount on your board.
- Sturdy construction.
- Long life — 25,000 cross-point switching.
- High pressure, positive contact.
- Single pole, ten throw functions.
- Available in 1 x 10, 5 x 10, and 2 x 40 position modules.

MATRIX SLIDE SWITCHES

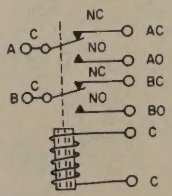
FEATURES

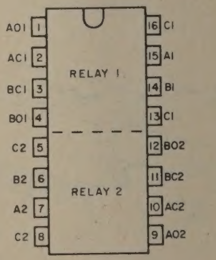
- Contact lifting principle employing detent channel and ball assures longer life by eliminating abrasion and preventing metal smear between pc board conductors.
- Standard switch sizes include 5 x 10, 10 x 10, 5 x 16 and 10 x 16 slide/position configurations.
- Flexible modular design permits various combinations of non-standard switch configurations.
- Standard sizes available with or without visual display.
  Standard visual readouts are legible .125″ high white characters on black background.
- Standard readout characters are "0 thru 9" followed by letters "A thru F" on switches having more than 10 slide positions.
- Visual readout characters other than standard characters are available.
- Small physical switch size is due to unique roll-up design of visual display indicators.
- Interchangeable contact finger grips — standard color is black; other colors also available.
- Brushed stainless steel face plate is designed for easy, attractive flush mounting to front panel.
- Gold or nickel plated contacts.
- Slide output tabs mate with AMP "110" Series FASTON Receptacles; pc board connections accept DUO-TYNE Flag One-Piece Pc Edge Connector or various AMP-UNYT Pc Connectors with crimp snap-in contacts.
- High speed machine-applied terminations assure top quality, low cost connections.

ELECTROMECHANICAL RELAY
TWO DPDT (2 FORM C)
PART NO. 53451-1

FEATURES

- Two independent relays per unit.
- 16-pin. DIP-type device compatible with present packaging techniques for IC's.
- DPDT (2 Form C) switch configuration (per relay).
- 4.5 volt relay designed to be IC controlled.
- Low resistance gold contacts.
- Electromechanical relay with true circuit isolation.
- Correct installation assured by symmetrical package design.
- High sensitivity.
- Fast, reliable, economical switching.

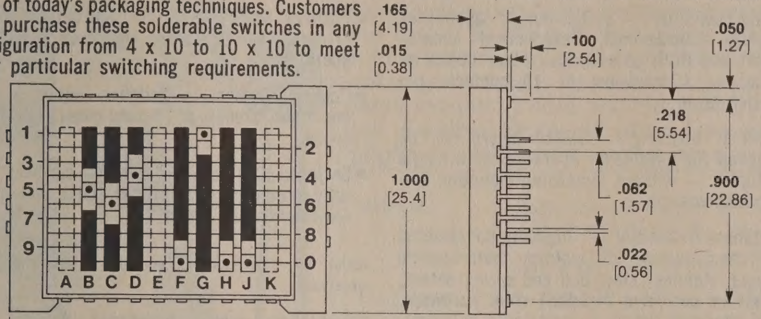


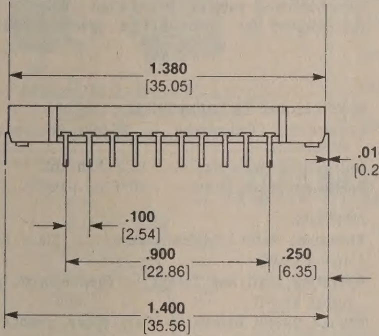


MINI-MATRIX SLIDE SWITCH / 3500 SERIES ROTARY SWITCH

INTRODUCTION

AMP Mini-Matrix Slide switches provide a highly reliable, low cost means of manually programming various types of electrical/electronic equipment. These unique devices are basically a multiplicity of manually operated slides which select cross-points in a matrix. They feature an extremely compact design and a very low profile, making the switches highly compatible with the miniaturization standards of today's packaging techniques. Customers may purchase these solderable switches in any configuration from 4 x 10 to 10 x 10 to meet their particular switching requirements.





ELECTRICAL SPECIFICATIONS

Contact Voltage/Current Rating:
Switching — 12 VDC at 100 MA
Nonswitching — 50 VAC at 100 MA

Contact Resistance (Dry Circuit):
Less than 1 Ohm

Insulation Resistance:
1 x 10^{10} Ohms (min.) at 100 VDC

Dielectric Withstanding Voltage:
200 VDC (min.)

Electrical Life End-Point*:
2000 Cycles (min.)

MATERIAL SPECIFICATIONS

Structural Plastic: UL recognized, 94V-0 rated, glass-filled thermoplastic polyester

Slide Springs: Stainless steel

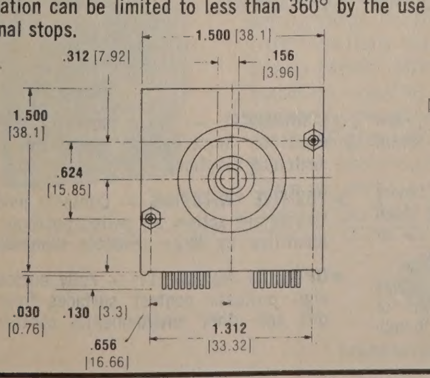
Column and Row Axes Buses: Copper alloy with contact areas electroplated gold

Contact Surfaces: Electroplated gold

* Electrical life end-point is defined as a contact resistance greater than 1 ohm.

INTRODUCTION/FEATURES

AMP 3500 Series Rotary Switches are designed to meet the needs of the Citizens Band (CB) Industry and can be used in numerous other communicative receive/transmit applications. These reliable, low cost programming switches are available with output codes that include BCD, variations of BCD, direct 7-segment displays, plus various receive/transmit outputs. Other output codes and any number of detent positions from 18 to 50 can be furnished in the same switch package height and width dimensions. Also, as many as seven .130″ (3.3 mm) thick layers can be stacked to provide up to 63 output functions per detent position. Each switch features a bidirectional rotating pc board with fixed, insert molded cantilever brush contacts. Insert molding of the contacts ensures accurate positioning as well as closely controlled contact forces. The detent is accomplished by spring loaded stainless steel balls in a molded detent housing. This design assures a positive snap and eliminates hang-up between switching positions. Actuator rotation can be limited to less than 360° by the use of internal stops.



ELECTRICAL SPECIFICATIONS

Circuit Current Rating (at 24 VDC):
Switching — 125 MA (max.)
Nonswitching — 2.5 amperes (max.)

Contact Resistance (at 6 VDC, 40 MA): 1 ohm

Insulation Resistance (at 100 VDC):
1 x 10^8 ohms (min.)

Dielectric Withstanding Voltage:
250 VDC (min.)

Capacitance: 5 picofarads (max.)

MECHANICAL & ENVIRONMENTAL SPECIFICATIONS

Contact Life Expectancy:
25,000 bidirectional rotation at rated load

Initial Operating Force:
0.5 to 2 in-lb (2.2 to 8.9 N)

Temperature:
Operating — −20°F to +190°F (−28.8°C to +87.7°C)
Nonoperating — −100°F to +275°F (−73.3°C to +135°C)

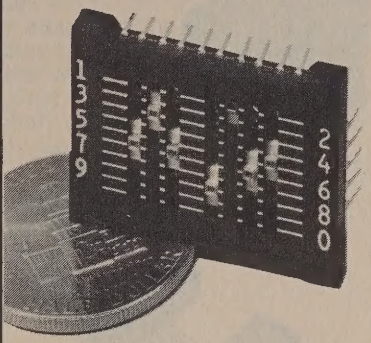
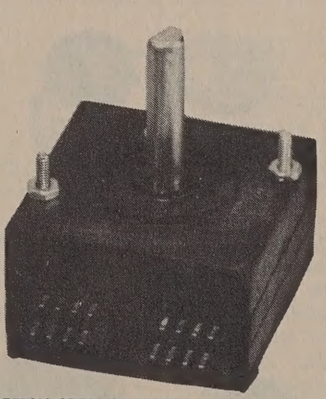
MINI-MATRIX SLIDE SWITCH



FEATURES

- 10 x 10 switch occupies only 1″ x 1.38″ (25.4 mm x 35.05 mm) of area on a pc board
- Very low profile — extends only .165″ (4.19 mm) above pc board
- Can be soldered to a pc board with other components
- Plastic parts made of UL recognized, 94V-0 rated thermoplastic polyester
- Customer selects the exact configuration — from 4 x 10 to 10 x 10 — to meet his particular switching requirements

3500 SERIES ROTARY SWITCH



MATERIAL SPECIFICATIONS

Housing, Front & Rear Covers:
94V-0 rated black thermoplastic

Operating Shaft: Zinc alloy

Connecting Hardware:
Brass or corrosion resistant steel

Printed Circuit Boards:
Plastic sheet, copper clad, grade FR-4 with electroless nickel plated circuits

Contacts:
Copper alloy, bright tin-over-nickel plated

Detent Wheel: Black polycarbonate

AMP

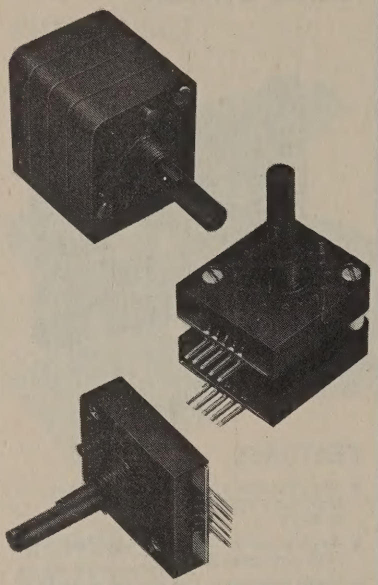
MULTI-LAYER ROTARY SWITCHES
PRINTED CIRCUIT BOARD ROTARY SWITCHES

3000 SERIES



The AMP Multi-Layer Rotary Switch is specifically designed for logic level circuitry but is capable of controlling electrical circuits that operate at current ratings of 2 amperes, 115 volts ac (nonswitching) and up to 125 milliamperes, 115 volts ac (switching).

MULTI-LAYER ROTARY SWITCH
3000 SERIES

FEATURES

- Code Flexibility — Switch output capabilities include hexadecimal, hexadecimal complement and BCD, plus various other codes requiring a maximum of 13 contacts per switch layer.
- Modular Stacking — Switch layers can be stacked for multi-layer operation by a single actuator — without increasing mounting surface dimensions.
- Optimum Reliability — Ruggedly constructed switches consist of molded thermoplastic layers, stainless steel ball and spring detent, brass or corrosion resistant steel hardware, and phosphor bronze contacts with gold-over-nickel plating.
- Positive Switching — Positive detent action of detent wheel assures error-free operation. operation.
- Compact Design — Switches require a minimum of front- or behind-panel mounting space.
- Enclosed Contacts — Contact surfaces are fully protected against dirt, dust and other environmental hazards.

Note: All dimensions in inches unless indicated otherwise.

Specifications subject to change. Consult AMP Incorporated for latest design specifications.

SPECIFICATIONS

ELECTRICAL

Circuit Current Rating:
Nonswitching — 2A @ 115 VAC
Switching (Resistive Load) — 125 MA @ 115 VAC (Max.)

Initial Contact Resistance (Measured from input terminal, thru contact to output terminal) — 100 Milliohms (Max.)

Insulation Resistance (@ 250 VDC) — 1 x 10^8 Ohms (Min.)

Dielectric Breakdown Voltage — 300 VDC (Min.)

DIMENSIONAL

PHYSICAL AND ENVIRONMENTAL

Contact Life Expectancy — 25,000 Rotations @ Rated Load

Initial Operating Force — 1 to 2 Inch/Lbs.

Operating Temperature — —40°F to +190°F

MATERIAL

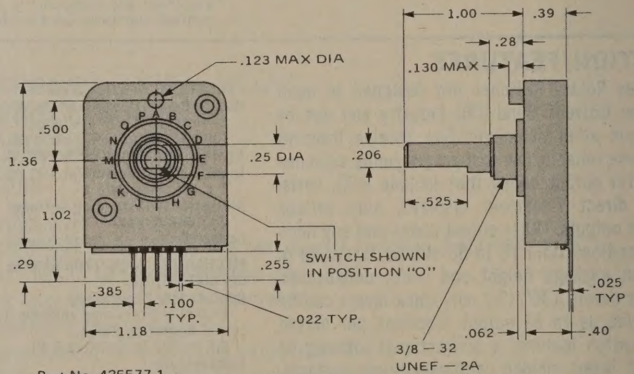
Structural Parts (Switch Layers) — Glass filled nylon 94-V2

Operating Shaft and Detent — Thermoplastic polyester 94-V-0

Printed Circuit Boards — Glass epoxy, copper clad

Contacts — Phosphor bronze, gold-over-nickel plated

Hardware — Brass or corrosion resistant steel



Part No. 435577-1

NOTES:
1. Knobs for operating switches are to be supplied by the customer.
2. Stops for limiting switch rotation to less than 360° can be provided upon request.

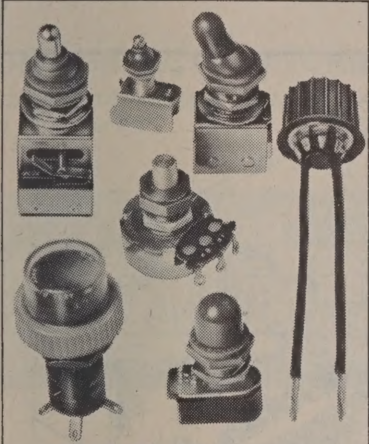
PRINTED CIRCUIT BOARD ROTARY SWITCHES
6000 SERIES

FEATURES

- **COMPACT DESIGN** — Small diameter, low profile switches are ideal for pc board mounting.
- **WIDE CHOICE OF OUTPUTS**—8-position binary coded octal, 10-position binary coded decimal, 16-position hexadecimal and 8-, 10- or 16-position single pole.
- **VERSATILE APPLICATION** — Available styles include slotted version for screwdriver or coin actuation, plus bar-type knob and thumbwheel versions for hand rotation.
- **ECONOMICAL** — Board mounting eliminates need for input/output wiring to perform switching functions.
- **POSITIVE SWITCHING** — Contacts have positive detent action; all switch positions easily identified by large readable numerals.
- **OPTIMUM RELIABILITY** — Fully enclosed design protects contact surfaces from dust, dirt and other environmental contaminants.

SWITCH ENVIRONMENTAL SEALING

Toggle, pushbutton and rotary switch seals



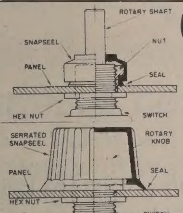
Meets MIL-B-5423 specs; EMI/RFI-shielded versions available.

MIL AND INDUSTRIAL VERSION: HEXSEALS®

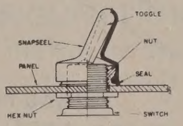
Provide positive high-pressure environmental sealing for all standard switches and rotary shafts with one-piece silicone boots incorporating a molded-in hex nut for water-tight, dust-tight protection. Replacing regular mounting hardware, vibration-resistant Hexseals fit snugly around the switch neck to seal both the panel mounting hole and the switch—even against a 30 foot head of water or gas. Flexible Hexseals allow free motion of shaft or lever. A variety of boot height, diameter and thread sizes are available. Ask for Bulletin HEX-72

Material:	Boot: Silicone rubber unless otherwise specified. Silicone rubber conforms to ZZ-R-765-Class III, Gr. 50. Other elastomers available on special order. Nut: Brass, nickel plated
Temp. Range:	—160°F TO +500°F (—106°C TO +260°C)
Pressure Range:	Exceeds 15 psi internal and external
Shelf Life:	Excess of 25 years
Resistant to:	Salt spray, weather, sunlight, ozone, and most acids,
Stock Colors:	grey, transparent (Clear); Other colors available on special order.

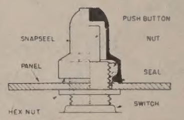
COMMERCIAL VERSION: SNAPSEALS T.M.



Rotary Shaft Seals
Shaft diameter: 1/4″ nom.; bushing diameter: 3/8″. For Ratchet Knob Type: knob height: 1/2″ approx.; knob diameter: 5/8″ approx.



Toggle Switch Boots
Bat handle height from panel: 7/8″; bat handle diameter: up to 1/4″; bushing diameter: 1/2″ max.



Pushbutton Boots
Pushbutton height from panel: up to 9/16″; pushbutton diameter: up to 1/4″; bushing diameter: 3/8″ or 15/32″.

Low-cost, easy-to-install Snapseels slip easily over standard pushbutton, toggle or rotary switches to provide double insulation while sealing against moisture, dirt and dust, solvents, most acids and external pressures of 10 psi. Many sizes. SPECIFICATIONS: Material: black neoprene (other materials and colors available); Operating temperatures: —65°F to +300°F; Shelf Life: 2 years; Mounting nut: nickel-plated brass.
Ask for Bulletin SNP-72

INDICATOR LIGHT SEALS: RubRglas®-Seel

Transparent and flexible pressure switch boots of glass-clear silicone rubber allow complete visibility of the completely enclosed and sealed lamp filament and "press-to-test" markings. Molded to a corrosion-resistant aluminum nut with an integral gasket rib for firm seating against any panel surface. Wide range of thread sizes available.
Ask for Bulletin HEX-72A

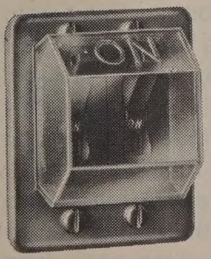
7/8-32NS-2B
11/16-32NS-2B
.850-24NS-2B

CIRCUIT BREAKER BOOTS

Protective RubRglas®-Seals



Shield exposed panel openings and circuit breakers with single, double or triple pole switch handles against weather, salt water, acids and dirt without redesigning equipment or hindering operation. Tough but flexible wide-angle boots made of glass-clear silicone rubber keep switch handles visible and accessible for easy manual operation. Boot assemblies consist of RubRglas shield, cadmium-plated steel frame, self-sealing stainless steel screws (Seelskrews®). Over 25-year shelf life.
Ask for Bulletin No. CB-72

EXOTIC ELASTOMERS

Extreme precision tolerances in all types of miniature elastomer molding. Cut waste to a minimum by getting the best performance out of vitons, silicones and other hard working materials.

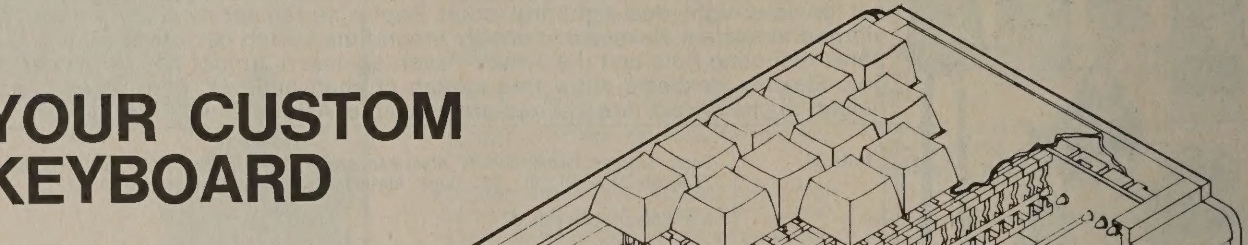
KEYBOARD PRODUCTS

YOUR CUSTOM KEYBOARD



If you need a custom keyboard, you need ADI. ADI keyboards eliminate the need for engineering design costs. Universal parts and modular construction are used to give you low cost and fast delivery on specialized keyboards. Photo-optic coding eliminates contact switching, giving you years of trouble-free service.

In the ADI keyboard, beams of light are directed through a key matrix to photodetectors, whose amplified outputs provide TTL compatible encoded data. Each keyswitch is a notched steel mask which, when depressed, selectively interrupts these light beams. Each key has access to fourteen (14) data bits plus a strobe bit. This technique places all of the encoding information in the individual keyswitch, making the code generation independent of the location of the keyswitch. The modular construction of ADI keyboards allows up to ten key rows with up to thirty keys per row.

The secret of the ADI Custom Keyboard is the standardized interface from the key matrix. Almost any key array, and modifications to this array, can be provided without changing the 17 pin interface connection from the key matrix. This interface presents the encoded data plus strobe from any depressed key anywhere in the matrix. Sufficient bits are available to encode more than 1000 keys while eliminating the possibility of any erroneous codes resulting from simultaneous depression of two or more keys. The standard keyswitch code structure provides for a final multi-mode code of up to eight data bits with additional bits available.

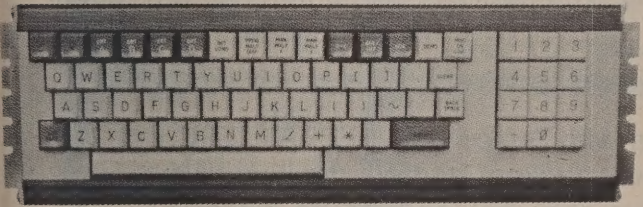
FEATURES

MODULAR CONSTRUCTION —

Universal components may be assembled to match almost any requirement.

NON-CONTACT SWITCHING —

Problems of contact bounce, wear and resistance are eliminated.



STANDARD PANEL CUTOUT —

A variety of key arrays may be adapted to a simple rectangular cutout by adding the low cost trim panels.

CONVERTIBLE CONFIGURATION —

In addition to changes in the key array, keyboards may be simply changed from chassis mount to desktop units.

BUILT-IN ERROR PROTECTION —

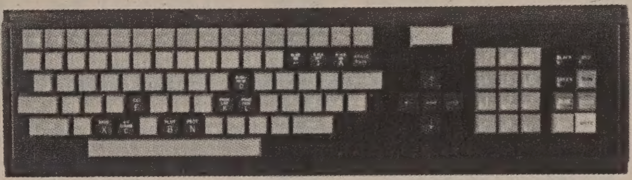
Each keyswitch contains the coding for lockout and rollover protection.

LOW COST —

Mass production of universal parts and elimination of non-recurring design charges provides a superior keyboard at minimum cost.

UNIVERSAL LOGIC —

The logic, either hardwired or programmed, automatically adapts to changes in the key array.



ULTRA-RELIABLE —

Steel keyswitches with life in excess of 100 million operations, solid state switching, and conservative design mean years of trouble-free operation.

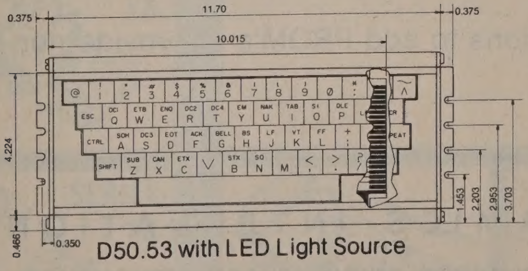
μ-PROCESSOR COMPATIBLE —

The Basic Keyboard, which provides TTL compatible encoded data without logic, is ideally suited to micro-processor based systems. The Universal Logic Card is eliminated, and the encoded keyboard output presents a minimum burden on processor overhead and memory requirements. The simple algorithms for rollover/lockout error protection and code conversion adapt automatically to different key arrays.

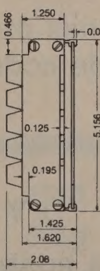
SPECIFICATIONS

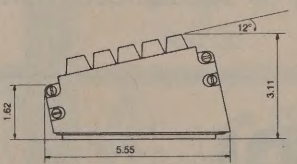
Power Required	+5 vdc, ±5% 250 ma (Basic) 550 ma (Std)
Keytops	Sloped (Std) Stepped (Opt)

Key Spacing	¾ inch centers
Key Pressure	2.0 ±0.5 oz.
Key Travel	0.195 inch
Switch Point	0.150 inch nominal
Dimensions	See Drawings



D50.53 with LED Light Source





Notes: 1. Length determined by key array
2. Increase width by 0.75 inch for each additional row.

INSTANT PROTOTYPES —

Rapid delivery of special keyboard prototypes is arranged to fit each customer's needs.

The modular construction of ADI Custom Keyboards allows almost any key array to be assembled without requiring any non-recurring charges other than tooling of special two-shot molded legends. ADI Custom Keyboards are available in two versions: the Model D40 Series without logic, and the Model D52 Series with logic. A number of options are also available, including additional encoded keys. Please contact ADI for complete information.

D40 SERIES KEYBOARDS include:

Encoded keys for ASCII code generation with Space Bar, REPEAT, ESC, LF, CR, CTRL, and SHIFT (2) keys, rollover/lockout coding, positive true TTL compatible 13 bit parallel output, two-shot molded keytops, chassis mount end plates, and LED light source.

D52 SERIES KEYBOARDS include:

D40 Keyboard as described above, plus the Keyboard Logic Card which provides 4-mode ASCII operation, 7 or 8 bit negative true parallel output, electronic latching, gated outputs, pulsed and latched strobe signals, keyboard inhibit control line, alpha shift reverse control line, repeat circuitry, and provision for options as listed.

KEYBOARD OPTIONS

- Shift Lock
- Numeric Cluster, 12 key
- Selective Shift Inhibit
- Stepped Keys
- Desktop Enclosure
- Trim Panels
- Engraved Legends

LOGIC OPTIONS

- Parity Generation
- Upper Case Only
- Automatic Repeat
- Repeat Rate Limiter
- Neg True Open Collector
- Pos True
- Serial, TTL
- Serial, EIA

The keyboard Logic Card also has provisions to add PROM's to provide non-logical bit pairing or specialized multi-mode codes.

FUSETRON DUAL-ELEMENT FUSES

Long time-lag prevents useless shut-downs caused by ordinary fuses opening on starting currents or other harmless overloads, yet protects against short-circuits. On normal installations will guard motors against burn-out from overloads or single phasing. U/L Listed for motor running and circuit protection up to 250 volts.

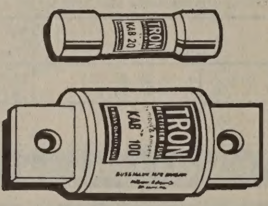
TRON RECTIFIER FUSES

For Protection of Semiconductor Rectifiers and Similar Applications



Especially designed for protection of semiconductor rectifiers, thyristors and other solid state devices. High interrupting capacity and very fast clearing to restrict let-through current and energy to very low values. Give safe short-circuit protection for systems with fault current to 200 kA at 600 volts or less. Carry 100%, open at 1000 secs between 150% and 180% of rating; open within 1 sec at 250% of rating.

GBB SERIES

Size, 1-1/4" length x 1/4" diameter.

Buss No.	Amperes	Max. Volts	Net Each
GBB	1, 1-1/4, 2, 3, 4, 5, 6, 7, 8, 9, 10	130	$1.16
GBB	12, 15, 20, 25, 30	65	1.16

KAA SERIES

Size, 1-1/2" length x 13/32" diameter. Also available up to 1000 amps; prices on request.

KAA	1/2, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 12, 15, 20, 25, 30	130	$1.67

KAW SERIES

Size, 1-1/2" length x 13/32" diameter.

KAW	1, 2, 3, 4, 5, 7, 8, 10, 12, 15, 20, 25, 30	130	$1.71

KAB SERIES

Size, 9/16" diameter x 2" length, values to 30 amps; 1-7/32" diameter x 3-1/8" length, 70 amps to 200 amps. Also available up to 800 amps; prices on request.

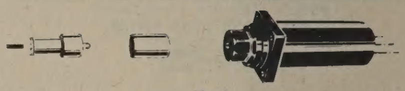
KAB	1/2, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 12, 15, 17-1/2, 20, 25, 30	250	$1.90
KAB	70, 80, 90, 100, 150, 200	250	8.53

KAC SERIES

Size, 2-7/8" length x 9/16" diameter. Also available up to 800 amps; prices on request.

KAC	1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 12, 15, 17-1/2, 20, 25, 30	600	$2.80

SERIES 70 FUSE



Type
HWG*

SIGNAL-INDICATING • ALARM-ACTIVATING

For use in telephone and similar applications. Color code indicating pin extends from end when fuse opens. Glass tube construction. Rated 300V.

Buss No.	Amperes	Net Price For

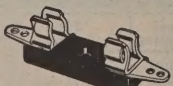
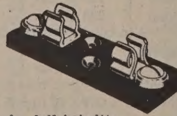
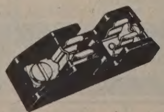
BLOCKS FOR 13/32 x 1-1/2 inch FUSES



No. 4421 — 1 pole, small bakelite base, solder terminals. Beryllium copper silver plated clips. Base dimensions, .6250 x 2.3125 inches. Net Each $0.75

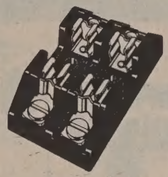


No. 4515 — 1 pole, full bakelite base, screw terminals. Beryllium copper silver plated clips. Base dimensions, .7500 x 2.5625 inches. Net Each $0.97

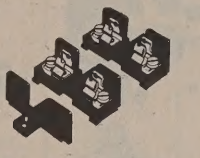


No. 2807 — 1 pole, molded phenolic base with side barriers, screw terminals. Spring bronze albaloy plated clips. Base dimensions, .859 x 3.000 inches. Net Each $0.98

BLOCKS FOR 13/32 x 1-1/2 inch FUSES (cont'd)



No. 2808 — 2 pole, molded phenolic base with side barriers, screw terminals. Spring bronze albaloy plated clips. Base Dimensions, 1.625 x 3.000 inches. Net Each .. $1.61



Add-On Fuse Block — Each pole locks into each other. New poles can be added at any time, each has end barrier. Net Each $0.22

No. 3742 Specify End Barrier Only. Net Each $1.50

No. 3743 Specify One-Pole Only — Base dimensions, .787 x2.562 inches. Marking strip in 50 inch lengths. Net Each $0.69

TRON FUSE CLIPS FOR P.C. BOARDS

For ¼" diameter fuses — offer economical way to mount fuses on printed circuit boards. Clips with two tabs, especially bowed that snap in P.C. board to hold clip firmly while being wane soldered, eliminates riveting. Clips available with end stops and single tabs.

BUSS No.	No. Tabs	Clip Material	Clip Finish	Net Each
1A1310-05	1	Beryllium Copper	Tin	$0.18

OTHER STANDARD AND SPECIAL FUSES, BLOCKS AND HOLDERS

If the fuses, fuse blocks and holders shown do not fit your requirements ask for information on other types. Fuses and fuse mountings to meet JAN and Military specifications also available. If you have a special problem in protection, send description or sketch giving number of circuits, type of fuse, terminals, etc., desired. We welcome such inquiries.

custom switches at OFF-THE-SHELF PRICES

CALL (617) 926-0800

Let C & K Components build exactly the right switch for your OEM applications. No tooling charges and no engineering lead time when you select from our wide range of pre-engineered options. Actuators. Circuit configurations. Terminal styles. Mounting methods. Plus many others. Don't compromise your design to use a "standard" switch. C & K's custom switches, at off-the-shelf prices, are readily available. We will generally build a sample at no cost to you.

Check the pictorial presentation of our popular Toggle/Rocker/PC Mount lines at right. Everything shown represents pre-engineered options. Almost any combination is possible. And there are others not shown. There are over 250,000 toggle combinations alone.

Examine, too, the other C & K switch lines below. Some of them, like the subminiature slide switch, are new from C & K.

What can I use to keep all the manufacturers' product data I receive in order?
What system makes filing or retrieving manufacturers' catalogs fast and easy?
Which file system have thousands of engineers purchased because they know it works?

eem FILE SYSTEM

THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

Here's how to order your eem FILE SYSTEM:

For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:

United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

United Technical Publications, Inc., Div. of Cox Broadcasting Corp. • 645 Stewart Ave., Garden City, N.Y. 11530

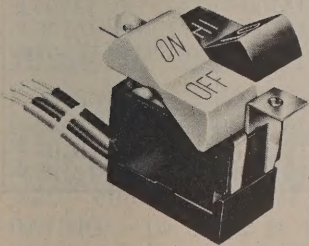
Available in 3 and 4 Pole Series. For Lighted Tippette add Prefix "L" to above numbers.



TIG Series with double actuators

Standard Colors are WHITE, -WH and BLACK, -BL. Other colors available upon request.

Imprinting on Actuators may be had upon request.

Brackets — In addition to the illustrations shown, we offer a variety of brackets — offset, flat, angled, open ear, snap-in, etc. Specials can be made upon request. Snap-in style is designed for panel thickness of approximately .040" to .100". For mounting information and dimensions consult distributor. This model bracket is available on single, double and three pole Tippettes — Single and double pole lighted Tippettes. Narrow or wide bezels.

LIGHTED TIPPETTE FEATURES

Actuators, Brackets & Accessories — Available in the same styles as listed in the Tippette Series. Lenses are Red, Amber, Clear and White. Special variations and colors available.

Lamp Characteristics

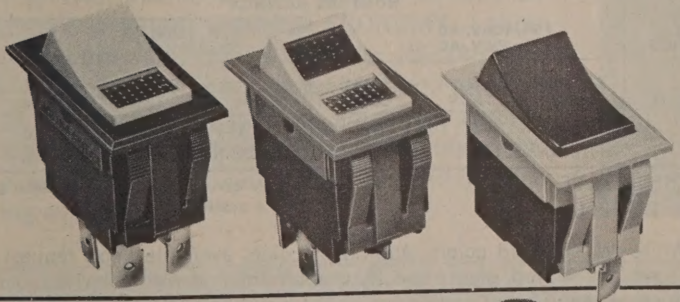
Neon (Standard)

120*-240 Volts	.002 Amps.

Incandescent

6 Volts	.20 Amps.
12 Volts	.08 Amps.
24-28 Volts	.04 Amps.

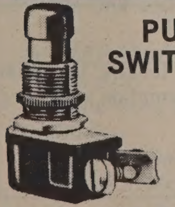
*Available with "High Brightness" in 120.

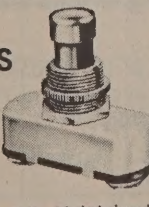


CURVED ROCKER TIPPETTES

Insulated all-nylon bracket/bezel and rocker may be molded in any color combination of available Zytel 101 colors. Switch snap-mounts into conventional opening in panel from .030" to .250" thick. Available with ratings and circuit characteristics for single and double pole Tippettes and lighted Tippettes listed above. U/L and C.S.A. listings. Rocker may be ordered smooth (no light), or with one or two large-lens indicator lights as illustrated. Legend imprinting may be specified.

PUSH SWITCHES





Type: PP - Push, On - Push, Off. Maintained. NO Normally Open. Momentary NC Normally Closed. Momentary. All Have 15/32" Dia. Bushing. Push buttons with color coded caps available.
* Screw Terminals. Others Have Solder Lugs.
† Ratings up to 2 HP available.

MINI TIPPETTE SERIES — SINGLE AND DOUBLE POLE

Insulated all nylon bracket/bezel and rocker may be molded in any available DuPont Zytel color. Snap-in mounting. Lighted and unlighted versions. Imprinting available on bezel, lens or rocker. New, patented wiping action contact arrangement has been tested to withstand in excess of 100,000 cycles at fully rated inductive load. Excellent for low voltage, very low current applications. UL and CSA listed.

.144 X .158 SLOTTED HOLE
STANDARD WIRE LENGTH 10 IN. WIRE GAGE 16 AWG

We built an umbrella around a switch . . . by putting our subminiature snap-action switch inside a sturdy housing and injection molding epoxy plastic that encapsulates the switch and leads to seal out dirt and moisture. The result? A switch you can splash, spray, freeze, subject to all kinds of weather. This switch comes with insulated, 10 inch, 16 gauge leads attached. Electrical rating E72 series—10.1 amp., ¼ H.P. 125/250 VAC.

Part No.	Circuitry	Description	Price
E72-40A	SPDT	Button	$3.15
E72-40H	SPDT	Actr	3.37
E73-40A	SPDT	Button	3.91
E73-40H	SPDT	Actr	4.13

Note: For low energy switching applications, the E73 series of this switch is available with gold "crosspoint" contacts. The E73-40A is rated at 0.1 amp., 125 VAC.

LOW ENERGY SNAP ACTION SWITCHES
WITH GOLD "CROSSPOINT" CONTACTS

Cherry Gold "Crosspoint" Contact switches are available in a wide variety of switch types and mountings as shown at left. These provide extremely low insertion resistance and long life . . . measured in millions of operations. The contact material is W/E Alloy #1 . . . 69% Gold, 25% Silver, 6% Platinum.

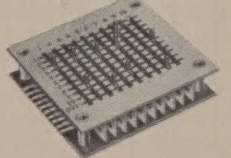
MATRIX TYPE SELECTOR SWITCHES

Manual programming and switching for complex control equipment. Each of two standard types is expandable up to five modules, providing 500 to 1,000 crosspoints. Custom design available up to 2,784 crosspoints.



Electrical Capacity:

1. Make and break 48 volts DC at 0.50 Amp. 125 Volts AC at 0.15 Amp.
2. Current carrying only (no make and break) 2 Amp. AC or DC.

Insertion Resistances:
50 milliohms plus 6 milliohms per inch of printed circuit.
Note: Overall width of basic 10 x 10 and 20 x 10 Selector Switch is 3½ inches. For each 10 sliders added to the basic unit add 3 inches to overall width. A 20 slider unit measures 6½ inches wide; a 30 slider unit measures 9½ inches wide; a 40 slider unit measures 12½ inches wide and a 50 slider unit measures 15½ inches wide.

COMPLETE PRODUCT LISTING

The example at left calls out a **T-35 Series** back-mount Thumbwheel, with **J-pin terminations, 10 position decimal** code, **black gloss finish,** in a **three switch assembly.**

AVAILABLE PC BOARD TERMINATIONS

All PC boards have a .040″ diameter hole to accommodate a wire for each output. Pin terminations for mother-board insertion or for wire-wrap capabilities can be applied upon request. Two types of pin terminations are available:

THUMBWHEEL SWITCHES

LIST PRICE ADDED FOR OPTIONS AND SPECIAL FEATURES

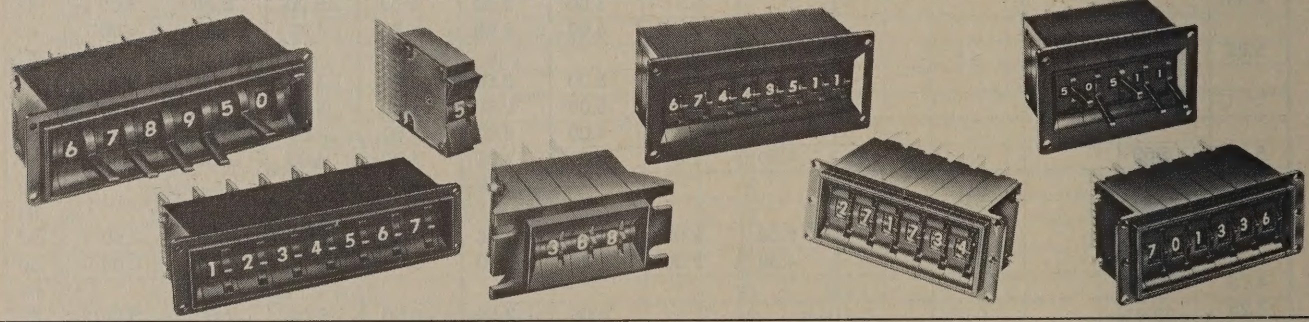
1. Stop pins (to limit wheel rotation), when installed at factory	$0.50/switch
2. Matte Finish (per switch)	0.30/switch
3. Spacers (all sizes: blank, gloss or matte)	0.50 each
4. Imprinting on switch or spacer (see 10)	0.50 each
5. Component installation (excluding component cost)	0.20 comp.
6. Pin terminals on Circuit Board	Consult Factory
7. End caps	0.70/set
8. Assembly hardware (charged only when shipped unassembled):	
T20, L20, T24, T35, T38, T50, T51, T63, T65, T72, T75	0.30/set
T10, T11, L10, L11	0.50/set
9. Assembly of switches (price includes hardware but not endcaps):	
First switch in each assembly	$ 0.50/switch
Each additional switch	0.30/switch
Maximum	3.00 asembly
10. Special wheel imprinting, Setup Charge	25.00 per order
11. Nonstandard hot stamp type face,) one time tooling charge	5.00/character 15.00/minimum
12. Function switch double width	Consult Factory
Add $2.50 to list price of standard code listing in available series	2.50/switch
13. Special color wheel imprinting	0.25/switch
Setup	25.00
14. Colored switches or wheels	Consult Factory
15. Nonstandard Circuit Board codes or configurations	Consult Factory

COMPUTATION OF ASSEMBLY PRICE

(Items may be purchased individually)

1. Add the list price for each switch plus the options.
2. Add the spacer and end cap list price.
3. Add the assembly charge (see item 9 at right).
4. Compute the total number of individual switches to be purchased and refer to the discount schedule for the correct multiplier.
5. Multiply the assembly list price (from 1, 2 and 3 above) by the multiplier (4) to arrive at the discounted assembly price.

SOME TYPICAL ASSEMBLIES COMPLETE WITH END CAPS

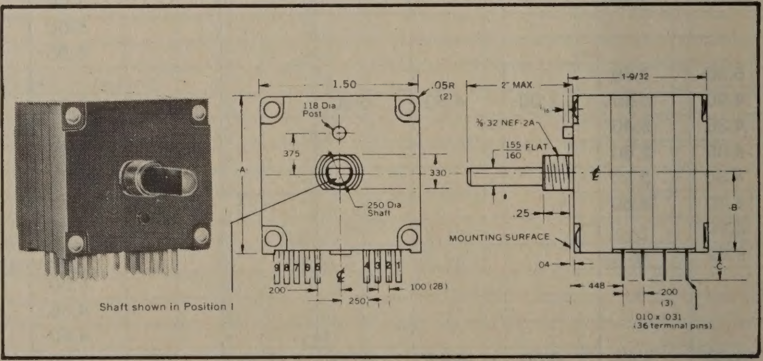


ROTOCODE®

THE NEW ROTARY SWITCH WITH CODED ELECTRICAL OUTPUT

A rotary shaft drives one or more PC board discs whose concentric traces rotate past stationary contact wipers of precious metal. Pin terminals on .100″ centers solder directly to your PC board.

The PC discs may be used on one or both sides. Each side provides a 7-bit code plus common and replaces the function of a multi-deck rotary switch.



SWITCH CHARACTERISTICS:

Operating Torque: 5 to 25 inch ounces
Contact Resistance: Initial 0.10 ohms max.
Insulation Resistance: 1000 megohms
Dielectric Strength: 500 VAC min.
Current Carrying Capacity: 1 amp.
Current Switching: 125 milliamps, 28 VDC
Life: Min. 1,000,000 detent operations. Consult Factory for 125 VAC
Temperature: −65°C to +85°C (altitude not exceeding 70,000 ft.)

MATERIALS:

Case, End Bearing, Shaft, Contact Modules: Thermoplastic
Terminals: Pre-plated for Solderability
Contact (Wipers): Precious Metal
Printed Circuit Discs: G10 Glass-Filled Epoxy PC Board with Precious Metal Circuitry

0.5 amp. max. carry
Voltage ....28V max.
Initial Contact Resistance ....200 milliohms max.
(typically 25 milliohms)

This proven design concept (crossed knife edge contact configuration) provides high force per unit of contact area, and virtually eliminates contact closure interference by contaminates. Contacts are normally held apart for greater shock resistance. No microphonics or bounce during turn-off or at rest. Three types with straight or angled stems for sloped or stepped keyboards.

Part No.	Contacts	Operating Force (oz.)	Stem Angle	Stem Design	Price

B99-74AB Telephone Format Keycap Kit
This kit adheres closely to telephone format with the following exceptions: Operator is not above the O and caps at lower left and right are blank. There are an additional 4 blank 1 x 1 caps, 2 blank 1 x 2 caps and 2 blank 1 x 1½ caps. These are two-shot molded Keycaps styled in Helvetica. The color is black body with white legend. $6.04

B99-75AB
Same as B99-74AB except color is white body with black legend. $6.04

B99-76AB Hexidecimal Keycap Kit
Kit consists of 1 thru 0 and A thru F plus 4 blank 1 x 1 caps, 2 blank 1 x 2 caps and 2 blank 1 x 1½ caps. These are two-shot molded Keycaps styled in Trade Gothic Bold. Color is black body with white legend. $7.06

B99-77AB
Same as B99-76AB except color is white with black legend $7.06

B99-65AB
This kit consists of Alphabet and Punctuation (1 x 1), 4 blanks (1 x 1½), 2 shift caps and 1 lock cap both 1 x 1½. 2 shift keys with hardware. 4 shift springs (all different). 1 x 8 spacebar with hardware. These are two-shot molded Keycaps styled in Helvetica. Color is white body with black legend. $22.62

B99-66AB
Same as above except color is black body with white legend. $22.62

B99-05AC
Relegendable 1 x 1 Keycap. Kit consists of 1-pc. 038-7226 white base and 1-pc. 028-7236 transparent cover. $.45

B99-06AC
Relegendable 1 x 2 Keycap. Kit consists of 1-pc. 028-7211 transparent cover.

Individual caps A thru Z and 0 thru 9 available in both black body, white legend and white body, black legend. These are two-shot molded Keycaps styled in Helvetica. $.60

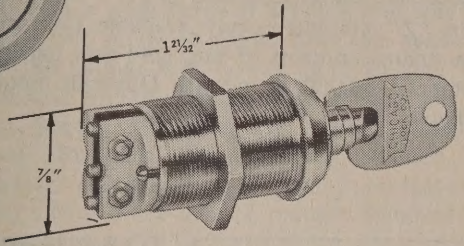
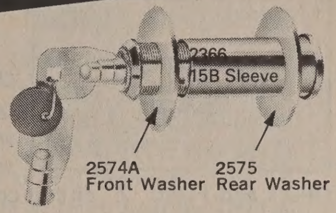
ACE Switch Locks

4900 Series **Ace Locks**
Underwriter's Listed **20 tumblers**

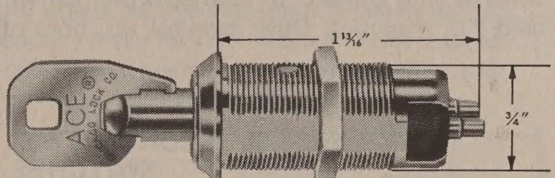


No. 4902 — SPDT switch lock. Hardened steel cylinder mounted in a brass barrel 7/8" diameter; solder terminals, polished chrome finish. Furnished with micro-switch No. 11SM1.

No. 4901—(not shown) Same specs as 4902, except with adjustable sleeve and washers. Adjustable 1-7/8" to 3-3/4" thickness.

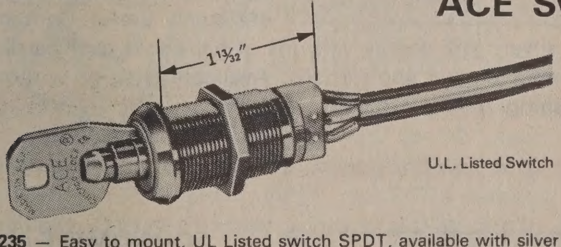


No. 3039—SPST switch with adjustable sleeve and washers; dependable wiping contacts. Solder terminals. Lock all brass construction, polished chrome finish. Key removable "off," "on" or "off-on." Also available in die cast outer barrel.



No. 4073—Maintaining contact switch. Key removable "off," "on" or "off-on". Also available as 4073-70 with momentary contact switch. All brass construction. Also offered with die cast outer barrel. No. 2274-80 same as 4073 except with double bitted lock.

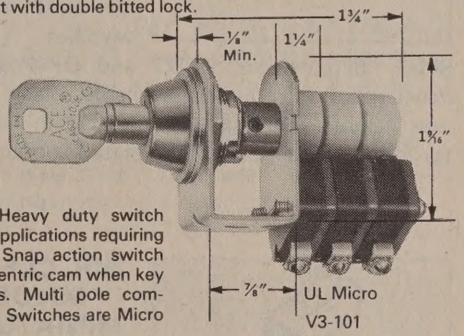
ACE Switch Locks



U.L. Listed Switch

No. 4235 — Easy to mount, UL Listed switch SPDT, available with silver plated contacts and 10" wire leads. Offered without 10" leads at reduced cost. Furnished with micro-switch 1SX1-H58.

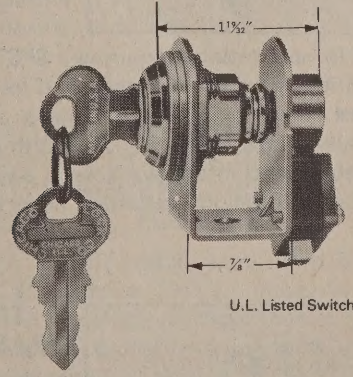
U.L. Listed Switch



No. EXA-112-3—Heavy duty switch lock designed for applications requiring UL Listed switch. Snap action switch actuated by an eccentric cam when key turned 90 degrees. Multi pole combinations available. Switches are Micro No. V3-101.

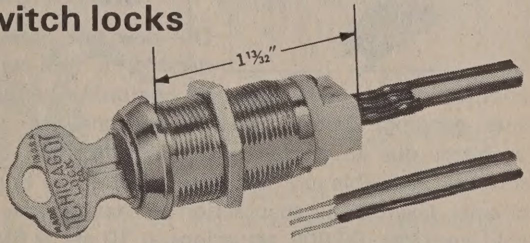
UL Micro
V3-101

Chicago double bitted switch locks



No. EXD-98
Same as EXA-112, except with double bitted cylinder. Designed for high current applications. Multiple pole combinations available. Furnished with micro-switch V3-101.

U.L. Listed Switch



No. 3535 — UL Listed switch, SPDT. Furnished with silver plated contacts and 10" wire leads. Same as 4235 except has double bitted cylinder. Available without 10" leads at reduced cost. Furnished with micro-switch 1SX1-H58.

Current Ratings	**Lock Numbers**
*125-250VAC, 5 AMP; 30 VDC, 3 AMP	4901, 4902

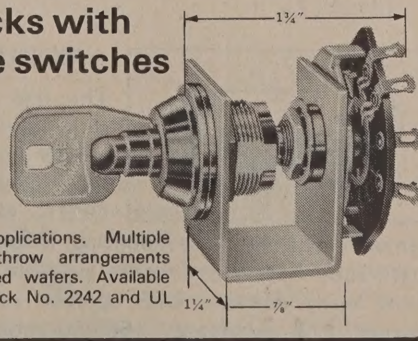
Also suited for low energy circuits.

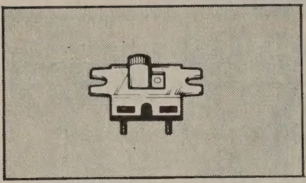
Switch locks with wafer type switches



No. 4188 — Key operated with bracket mounting and Ace cylinder. Switch designed for low voltage applications. Multiple poles and various throw arrangements available with stacked wafers. Available with double bitted lock No. 2242 and UL lock 4903.

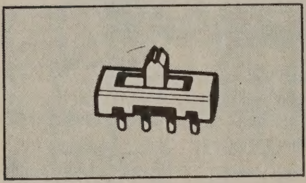
CHICAGO LOCK CO.

4311 West Belmont Ave., Chicago, Illinois 60641
Phone 312 282 7177



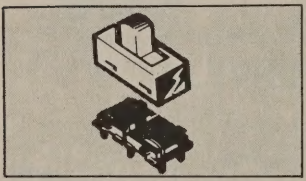
MINI MIKE SLIDE SWITCHES

Our standard line of high quality miniature slide and snap action switches. Available in SPST, SPDT, DPDT and Form Z" circuit configurations. Low energy switches with contacts of hard gold over barrier. Standard P.C. mounting. Other terminal variations offered.



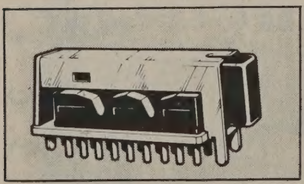
ECONOMITE SLIDE SWITCHES

Save on cost without sacrificing quality. Our line of low cost miniature slide switches, available in SPDT SP3Position, DPDT and DP4Position circuits. Panel and P.C. mounting available. Black button in various heights. Nominal rating — 300 milliamps 125VAC for 10,000 actuations. Silver plated contacts.



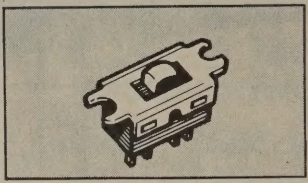
MR. CLEAN WAVE SOLDERABLE MINIATURE SLIDE SWITCHES

Our new line of wave solderable, anti-contamination, miniature slide switches. Features a unique (patents pending) 2-piece assembly designed to alleviate problems due to contamination by flux and cleaning solvents. Available in SPST, SPDT, DPDT and Form "Z" circuits. Over center snap action mechanism, low energy gold contacts, 50.000 actuations at 10 ma @ 6VDC resistive End of Life Criteria: 100 milliohms. Now available with stand off bases.



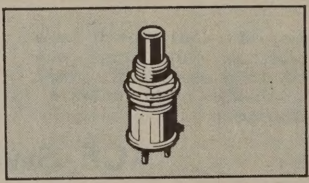
MODULE SERIES

This line of subminiature slide switches offers a greater number of switching capabilities. SPDT, DPDT, 4PDT and 6PDT circuitry options. P.C. mounting. Momentary and alternate action actuation modes available. Silver contacts. Low energy versions with contacts of hard gold over barrier. Life expectancy 150,000 actuations for SPDT and DPDT versions. 4PDT and 6PDT life expectancy of 10 000 actuations; 250,000 actuations for low energy models.



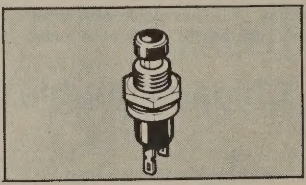
TAPIT KEYBOARD PUSHBUTTON SWITCHES

A 4 terminal momentary printed circuit switch. SPST — normally closed, Form "Z" alternate circuits available. Contacts of silver. Low energy contacts of hard gold over barrier. Life expectancy: 10,000 actuations. Optional mounting tabs available.



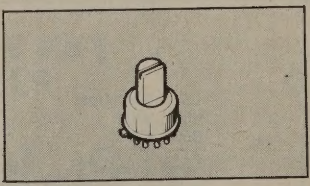
TO-5 PUSHBUTTON SPASAVER SWITCH

Where space is a consideration, this SPST normally open, momentary switch is extremely useful. Contacts of silver, low energy versions of hard gold over barrier. Printed circuit applications. Available with or without bushing.



ECONOMITE MINIATURE PUSHBUTTON SWITCHES

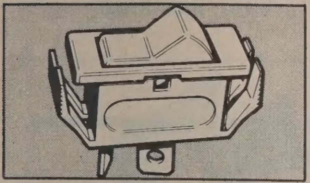
Attractive miniature pushbutton switches, ideal for use in applications requiring a SPST momentary action circuit. Where space, weight and low cost are of importance these switches offer many advantages. Contacts of silver. Low energy versions with gold contacts. These reliable switches are available in a variety of pushbutton colors and include necessary panel mounting hardware.



TO-5 ROTARY SPASAVER SWITCH

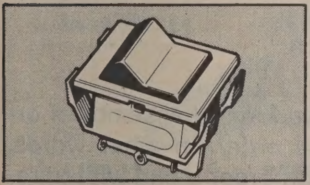
This wave solderable subminiature rotary switch gets up to 8 positions into a TO-5 can. The compact size offers a distinct advantage, in view of the increasing cost of P.C. board real estate and the premium on front or rear panel space. P.C., panel and board socket mounting with optional bushing. Actuator moves through 360 degrees in detented steps of 45 degrees. Available with stops as required from 2 to 8 positions. Low energy contacts of hard gold over barrier. Also available in DPDT circuitry. Life expectancy: 10,000 actuations.

CHICAGO SWITCH, INC. / 1714 N. DAMEN AVE. / CHICAGO, ILL. 60647 / (312) 489-5500



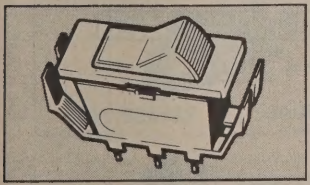
26 SERIES SINGLE POLE ROCKER AND PADDLE SWITCHES

Variety enhances the desirability of these switches. Modern styling with a wide range of actuator and case color choices. Solder, screw or slip-on terminals available. U.L. and CSA listings, with ratings up to 10 amps. SPST. SPDT circuits available. Matching panel lights and lighted versions. Special colors, hot stamping and metal bezels optional. Standard silver-cadmium contacts. Heavy duty versions available. Two switches in one case or a switch plus a lens in one case on request. Standard snap-in panel mounting.



27 SERIES DOUBLE POLE ROCKER AND PADDLE SWITCHES

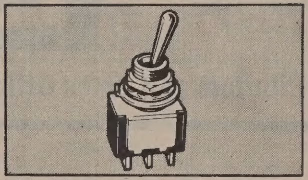
U.L. and CSA listings with ratings up to 10 amps. Compact switches with attractive styling and easy snap-in installation. SPST, SPDT, DPST, and DPDT versions are available. Choice of solder, screw or slip-on terminals. Switches come in a variety of case and actuator colors. Special colors, hot stamping and metal bezels are available on request. Standard silver-cadmium contacts. Lighted versions and matching panel lights are also offered.



38 SERIES DOUBLE POLE ROCKER — SINGLE POLE SIZE

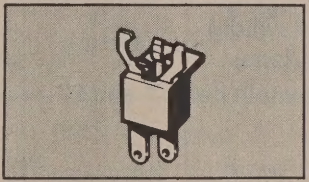
This switch, U.L. listed 6 amps at 125VAC inductive is a DPDT rocker switch in a package no larger than our single pole package. Features modern styling with a snap-in installation. Available in versions of SPST, SPDT, DPST, and DPDT. Solder or slip-on terminals. Heavy duty, low energy and dry circuit versions offered. Black, white, grey color combinations. Matching panel lights and lighted single pole versions available. Special colors, hot stamping and metal bezels optional. Low cost, high quality.

CALL OR SEND FOR OUR INFORMATIVE 24 PAGE CATALOG WHICH INCLUDES PHOTOS, LINE DRAWINGS, SPECIFICATIONS AND ORDERING INFORMATION ON OUR COMPLETE LINE OF SWITCHES AND INDICATORS.



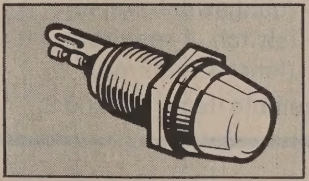
MINIATURE TOGGLE SWITCHES

Small switches, big in quality and long life. U.L. listed at 5 amps inductive 120VAC. SPDT and DPDT circuits available with solder or P.C. terminals. Life expectancy: 100,000 actuations at rated load for ON-ON versions. All others, 40,000 actuations. Panel or printed circuit mounting make for easy installation where speed, size and cost are at a premium. Includes mounting hardware. Other versions available on request.



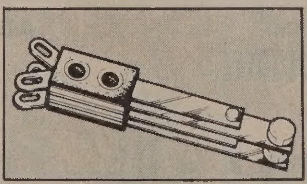
KLIPSOCKET

For all T-1 ¾ Midget Flange Based Incandescent and Neon Lamps. Bulb engages with nickel - silver contact/terminals which are molded in the glass filled nylon base. Terminals are designed for soldering or slip-on connectors.



PANEL INDICATOR LIGHTS

Three series of panel indicators to satisfy your lighting requirements. Long life and high brilliance Neon and incandescent versions available. Relampable indicators to fit T-1 ¾ midget flange based lamps. Wide range of color, terminal and lens choices offered. Nylon body mounts, snap-in, snap-out lenses. U.L. listed versions. Watertight models. Chrome bezel option.



LEAF SWITCHES

Low cost, long life leaf switching, custom designed to fit your application without costly tooling or special designing. Because of our engineering, production, design facilities, and tooling versatility, you can get the exact switch to meet your requirements. Wide variety of actuators, contacts, lifters and blades.

Distributors and Sales Offices Located in Major Cities

HOW TO ORDER

Individual parts are ordered by their respective part numbers from the appropriate pages in this catalog. These part numbers include descriptive information, such as contact arrangement or lens size and color. Whenever parts are to be assembled prior to shipment, the following format is to be used:

Switch and Lens Assemblies

Item 1:	S18011	(switch)
Item 2:	C1480AWW	(lens)

Note on purchase order "Assemble items 1 and 2"

Adapter Assemblies

Item 1:	A131	(adapter)
Item 2:	S18011	(switch)
Item 3:	C1480AWW	(lens)

Note on purchase order "Assemble items 1, 2 and 3."

Gangswitch Assemblies

Item 1:	G16704AH6J1	(gangswitch frame)
Item 2:	S18011	(switch, 4 required)
Item 3:	C1410AWW	(lens, 4 required)

Note on purchase order "Assemble items 1, 2 and 3."

The sequence used in the examples given above should be followed in all cases (switch/lens, adapter/switch/lens or gangswitch frame/switches/lenses).

If a purchase order were to include the three assemblies listed above, it would have eight line items. The purchase order would then require three footnotes:

"Assemble items 1 and 2."
"Assemble items 3, 4 and 5."
"Assemble items 6, 7 and 8."

This pattern must be followed for all assemblies ordered on a given purchase order. In other words, assemblies can appear on an order along with unrelated piece parts, but the items used in the assembly must appear in the sequence as illustrated. The footnote guarantees that the units will be shipped as an assembly.

If a lamp is required, it would be ordered as the final item to be included in the assembly. Most Distributors chose to order lamps separately.

The legend may be changed by removing the clear plastic overcap and lifting out the film or engraved legend plate.

The unique dual plate design allows a solid code lens to be changed to a projected color (through white) lens by merely reversing the two plates.

- The C120 OA** lens can be used in place of the C141 OA** lens in all applications in this catalog except with the S190 Series switch.
- The C121 OA** lens can be used in place of the C160 OA** lens in all applications in this catalog except with the S190 Series switch.

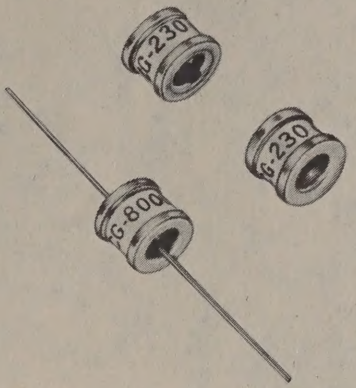
CLARE CIRCUIT PROTECTION

CG SERIES SURGE ARRESTORS

GENERAL INFORMATION

The CG series of Comm Gaps are miniature voltage surge arrestors designed to protect sensitive electronic equipment and personnel from damage and injury due to excessive voltages or currents. They consist of two electrodes hermetically sealed in a gas filled, rugged, metal-ceramic cylinder. In operation, the Comm Gap is a voltage dependent switch which at its breakdown voltage, changes its impedance from a near infinite resistance to a virtual short circuit. These devices are capable of fast operation and can handle extremely high levels of current for short durations. Comm Gaps are used in either one of two operating modes:

1) Passive Mode (Surge protectors)
2) Active Mode (Energy transfer switches used in trigger circuits and relaxation oscillators)



ENVIRONMENTAL RATINGS

Operating Temperature: −55°C to +125°C

Temperature Cycling (MIL-STD-202, Method 102A, Cond. C): −65°C to +125°C

Humidity (MIL-STD-202, Method 103B, Cond. B): 95% Rel. Humidity

Vibration (MIL-STD-202, Method 204B, Cond. C): 10-55Hz, .06DA

Shock (MIL-STD-202, Method 213A, Cond. C): 100g's

Thermal Shock (MIL-STD-202, Method 107, Cond. B): −65°C to +125°C

Barometric Pressure MIL-STD-202, Method 105C, Cond B): 50,000 ft.

THE ELECTRONIC DISTRIBUTORS
'78
MASTER CATALOG
FORMERLY: OFF-THE-SHELF CATALOG
THE ONLY NATIONAL CATALOG OF ELECTRONIC PARTS, INSTRUMENTS AND EQUIPMENT DESIGNED EXCLUSIVELY FOR DISTRIBUTORS AND THEIR CUSTOMERS.

YESTERDAY'S RADIO MASTER IS TODAY'S

ELECTRONIC DISTRIBUTORS MASTER CATALOG

Known as O-T-S, OFF-THE-SHELF CATALOG until this edition, the MASTER CATALOG encompasses the following product areas: audio and communications equipment; electromechanical components; electronic circuit components and subassemblies; panel components and hardware; production equipment and tools; test instrumentation; power sources; wire and cable; and related materials and chemicals.

The MASTER CATALOG is broken down into four basic sections. **A GENERAL INDEX** which lists manufacturers and products alphabetically. **A MANUFACTURERS' CATALOG SECTION** which displays their respective product pages and lists their addresses and phone numbers. **A MANUFACTURERS' DIRECTORY,** where participating manufacturers, again listed alphabetically with addresses and phone numbers, highlight their distributors. And a **GEOGRAPHIC DISTRIBUTORS' DIRECTORY** which includes the names, addresses and phone numbers of the local distributors nationwide which stock the products of manufacturers whose data appears in the "Manufacturers' Catalog Section."

SPECIALTY SWITCHES

The CROUSE-HINDS ARROW HART DIVISION has been a leading manufacturer of standard and custom designed Specialty Switches for over fifty years.

The products illustrated and identified on the following pages are currently being produced and shipped in volume to ARROW HART authorized distributors for resale and to original equipment manufacturers for use in their products.

These catalog items do not represent all of the switches manufactured by ARROW HART. They are typical of the products being used in industry at this time.

All of the catalog items listed are available for immediate delivery from our authorized distributors. Others not listed in this catalog are presently being manufactured and are available upon special order.

ARROW HART welcomes inquiries for controls to meet special requirements and will consider the design and tooling of new products where volume warrants.

Contact the nearest ARROW HART district sales office regarding price, delivery, or any other information required.

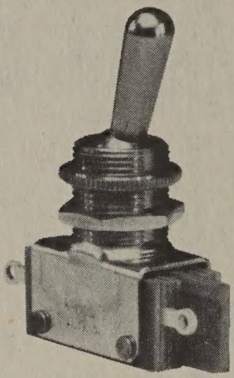
CANOPY SERIES, 3 AMP



CAT. NO. 21350EH

Designed for use in small appliances and instrumentation panels of all types, this group offers a full selection of circuits in a small size base. Switching mechanism consists of a roller which operates on a track of laminated phenolic, a time-proven design which assures exceedingly long life and high reliability.

- *Roller action contacts with quick make-break*
- *Laminated base construction*
- *Bright nickel finished exposed parts*
- *UL Listed, File E1148, Guide WOYR*

POWER TOGGLE SWITCHES
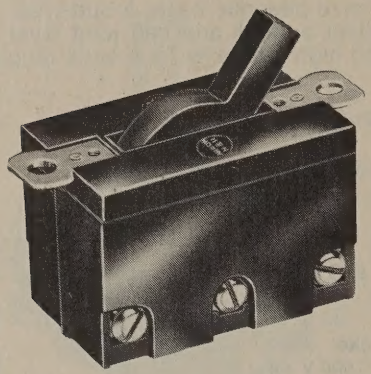
HEAVY DUTY
THREE-POSITION MAINTAINED

638 SERIES, POSITIVE CENTER OFF, 2 HP/30 AMP



CAT. NO. 80988

These three-position heavy duty toggle switches offer a unique positive center OFF feature, which assures that the lever cannot be moved from one side through the center without stopping. Because of this design, the Arrow Hart 638 Series is particularly well-suited for motor reversing applications.

- *3 positions, positive center OFF*
- *Sliding wedge contacts*
- *Molded phenolic base*
- *Bright nickel finished exposed parts*
- *Horsepower rating*

POWER TOGGLE SWITCHES
HEAVY DUTY
TWO-POSITION MAINTAINED

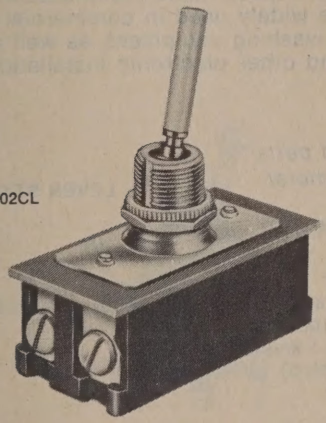
602 SERIES, 1½ HP/20 AMP



CAT. NO. 80602CL

These heavy duty toggle switches have been designed primarily for motor applications requiring interrupting capability up to 1½ horsepower. They feature wiping action, positive quick make-break, and are suitable for AC or DC use.

- *Wiping blade contact mechanism with positive quick make-break*
- *Molded phenolic base*
- *Bright nickel finished exposed parts*
- *Horsepower rating*
- *UL Listed, File E1148, Guide WOYR*

COMMON SPECIFICATIONS

Exposed metal parts . . .	Bright nickel
Dielectric breakdown . . .	Exceeds 1000 V rms
Standard hardware	1 hex nut, 1 knurled nut (unassembled)

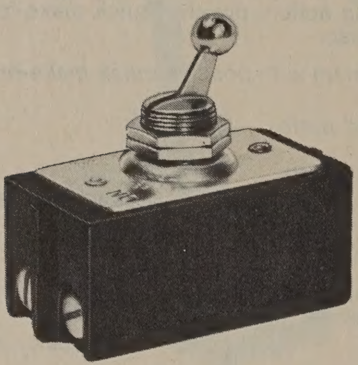
POWER TOGGLE SWITCHES
HEAVY DUTY
TWO-POSITION MAINTAINED

421 SERIES, 2 HP/20 AMP



CAT. NO. 80421.

These heavy duty switches feature quick make-break action in a molded phenolic base. They are widely used in commercial and industrial power tools and floor washing equipment, as well as in power circuits for computers and other electronic installations.

- *Positive quick make-break*
- *Molded phenolic base*
- *Bright nickel finished exposed parts*
- *Slotted sleeve, ½″ or 15/32″ diameter*
- *Horsepower rating*
- *UL Listed, File E1148, Guide WOYR*

SUBMINIATURE TOGGLE SWITCHES

TWO & THREE-POSITION MAINTAINED/MOMENTARY

INSTRUMENT GRADE

CAT. NO. TS3.

These Arrow Hart subminiature toggle switches are ideal for use in electronic test equipment, communications, switchboards, computers, aerospace instrumentation — wherever high switching reliability must be installed in a minimum amount of space. Gold plated contacts assure long shelf life and optimum low energy performance.

- *Maintained and momentary switching action*
- *Rhodium-plated contact carriers for long mechanical life*
- *Butt-type gold plated silver contacts for low energy reliability*
- *Circuits SPST thru DPDT*
- *Gold anodized aluminum exposed parts*
- *Combination solder lug/quick-connect terminals*
- *Slotted sleeve (¼″ dia., ¼″ length)*

COMMON SPECIFICATIONS

Exposed metal parts . . .	Gold anodized aluminum
Dielectric breakdown . . .	Exceeds 1000 V rms
Stationary contact material	Gold plated silver buttons
Moving contact material .	Rhodium-plated silver
Terminals	Gold flash
Base material	Molded diallyl phthalate
Contact mechanism	TS type: knee action TC, TE, TG, TM types: rocker action
Standard hardware	2 gold anodized hex nuts, 1 lockwasher, 2 locating rings (unassembled)

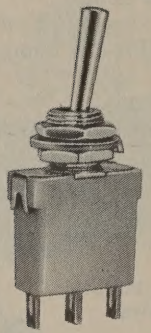
SUBMINIATURE TOGGLE SWITCHES

TWO & THREE-POSITION MAINTAINED/MOMENTARY

UTILITY GRADE

These general purpose subminiature utility switches are suited for applications where low cost dependability is important. Because these switches meet the standards prescribed by the International Electrotechnical Commission (IEC) they are ideal for use in products destined for sale in Canada and Europe.



CAT. NO. CTS3,

- *Positive and momentary switching action*
- *Meet Continental European standards prescribed by IEC*
- *Molded phenolic base*
- *Combination solder lug/quick-connect terminals*
- *Slotted sleeve (¼″ dia.) **

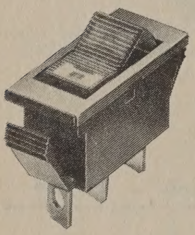
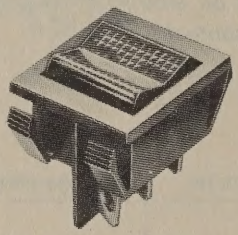
DOUBLE POLE
2-POSITION
(non-lighted)



SINGLE POLE
2-POSITION
(lighted)



DOUBLE POLE
2-POSITION
(lighted)

1600/2600 Series Miniature Rocker Switches offer designers a choice of colors and terminations with the ease of labor saving snap-in mounting. The 16 Amp rating affords the user the opportunity to utilize them in applications where similar competitive switches cannot be used. These low cost switches are available in single and double pole models in both lighted and non-lighted versions. They are widely used on instruments, computers, business machines, appliances and communication equipment.

- *16 Amp, 250 V AC*
- *Matching indicator lights available*
- *Slow make-break action*
- *Low cost*
- *Compact design with popular snap-in mounting*
- *UL, CSA, VDE, Semko, El Finland listed (Demko, Nemko, and U.T.E. pending)*

COMMON SPECIFICATIONS

Operation	Rocker lever action, two or three position maintained or momentary, with or without illumination
Mounting	Snap-In feature (see cutout dimension)
Termination	Combination solder lug/quick connect (.250″ spade)
Lever and Base	Standard color presently stocked is black
Insulation Resistance . . .	50 megohms
Operating Temp. Range .	−40° to 55°C

HOW TO ORDER NON-LIGHTED SWITCHES

Choose the circuit and action required from the selection chart on opposite page. Catalog number shown is complete ordering number. These non-lighted switches have black base, black rocker, with combination quick connect/solder lug terminal. All non-lighted switches listed are standard stocked models with the exception of those numbers marked with an asterisk, which are non-stocked items.

HOW TO ORDER LIGHTED SWITCHES

Refer to selection chart on opposite page. First 4 digits of catalog number denotes circuit and action. For complete ordering number, 4 additional letters/numbers are required to define rocker/lens color, lamp voltage, body color, and terminal style — as illustrated below:

X X X X — ( ) ( ) ( ) ( )

BASIC NO.	TRANSLUCENT ROCKER/LENS COLOR	LAMP VOLTAGE	BODY COLOR	TERMINAL
Note: Use 1609 for indicator light	A — Amber G — Green R — Red W — White	0 — No lamp 1 — 110 V, neon 2 — 240 V, neon 4 — 6 V, filament 5 — 12 V, filament 6 — 24 V, filament	1 — Black } Standard 2 — White } Standard 3 — Red } Special 4 — Green } Special 5 — Gray } Special	B — Solder lug E — Combination quick connect/solder lug

EXAMPLE: 1624-R41E = SPDT, On-Off-On action, red rocker/lens, 6-volt lamp, black body, combination terminal

NOTES:

1. *Switches are rated at 16 A, 250 V AC, except models 1606, 1607, 2606 and 2607, which are rated at 6 A, 250 V AC. Approvals pending (UL, CSA, etc.)*
2. *All lamps are assembled integral with the base, except for a switch or indicator with Green translucent rocker/lens. These are fitted with 110 V or 240 V fluorescent lamp. These particular lamps are inserted into a tube at the rear of the base. Other switches with the tube in the base can be supplied on special order to enable lamps to be fitted on site.*
3. *Other optional circuits, colors, functions, terminals available on special order — please consult factory.*

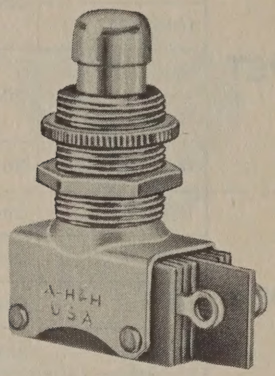
PUSHBUTTON SWITCHES
GENERAL PURPOSE
MOMENTARY/DOUBLE ACTION

CANOPY SERIES, 1 AMP AC ONLY



CAT. NO. 3391

Arrow Hart Canopy Series push switches feature slow make-break action, butt-type contacts and laminated base construction. The light operating pressure of these pushbuttons makes them ideal for instrument panel and remote control applications.

- *Slow make-break action*
- *Laminated base construction*
- *Plain top or snap-on phenolic button*
- *UL Listed, File E1148, Guide WOYR*

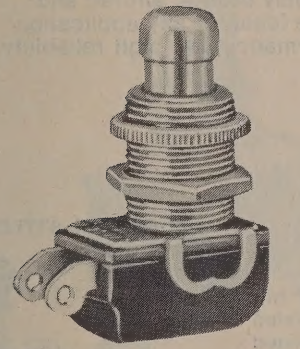
PUSHBUTTON SWITCHES
GENERAL PURPOSE
MOMENTARY ACTION

511 SERIES, 3 AMP, AC ONLY



CAT. NO. 80511

These versatile butt action type push switches offer light operating pressure, high reliability and long life. A variety of styles are available to meet a wide range of applications, such as burglar alarms, keyboards, test and communications equipment, industrial hardware, etc.

- *Slow make-break contact action*
- *Choice of 3 button styles — standard aluminum, concave aluminum or snap-on molded phenolic*
- *Molded phenolic base*
- *Bright nickel finished exposed parts*
- *Slotted sleeve ($\frac{15}{32}$" dia., 32 T.P.I.)*
- *UL Listed, File E1148, Guide WOYR*

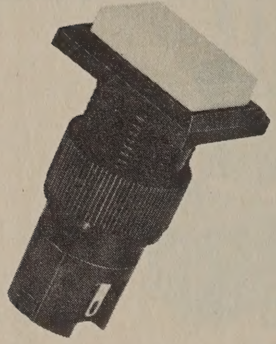
LIGHTED PUSH SWITCHES

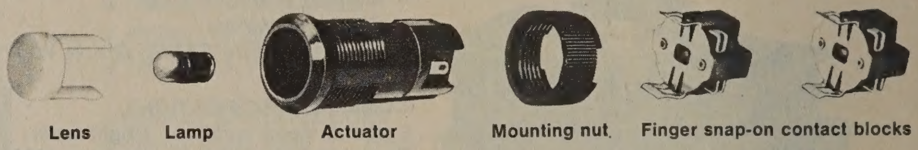
MOMENTARY & ALTERNATE ACTION

ADAPT-A-SWITCH

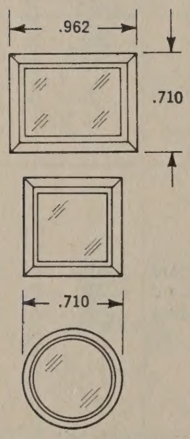
Thousands of switching variations can be created using the 31 standard components of Arrow Hart's unique Adapt-A-Switch line, versatile enough to meet practically any low energy switching application. Lighted or non-lighted push switches, or indicators only, may be assembled instantly in almost any combination of shapes, colors and configurations.



SHOWN ACTUAL SIZE



- *Unique construction design concept enables user to build lighted and non-lighted switches and indicators to exact requirements.*
- *Space-saving design makes unusually high density mounting possible.*
- *One piece terminal-to-contact construction ensures minimum heat rise.*
- *Silver contacts for low energy reliability.*



COMMON SPECIFICATIONS

Actuator terminals	Tin plated solder type, accepts #18 wire
Actuator weight	8 grams
Plunger travel	.094 inches
Contact block terminals	Solid fine silver solder type, accepts #18 wire
Contact block weight	4 grams
Contacts	Positive snap, wiping action
Contact ratings	Standard duty (fine silver): 5 amp, 125 V AC resistive; 2 amp, 250 V AC resistive; 5 amp, 28 V DC resistive. Low energy (gold plated): minimum rating for dry circuit application is 10 micro amp 50 mV. Gold plated contacts are for applications under 100 mW.
Dielectric strength	Exceeds 1000 V rms
Mechanical and Electrical Life, @ full ratings	100,000 cycles min.

MAX. OPERATING FORCE:

ORDERING INFORMATION

1. Determine lens shape and color. Specify catalog number.
   Example: For square red lens, order Cat. No. 83500-81.
2. Determine shape and action of actuator required. Specify catalog number.
   Example: For square momentary actuator, order Cat. No. 83502.
3. Determine number of poles required — either standard duty or low energy. Specify catalog number.
   Example: For standard duty, single pole contact block, order Cat. No. 83500-30.
4. Determine accessories required. Specify catalog number.
   Example: For special mounting wrench, order Cat. No. 83500-45.

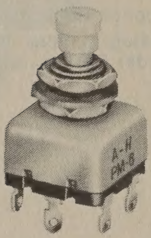
SUBMINIATURE PUSHBUTTON SWITCHES

MOMENTARY ACTION

INSTRUMENT GRADE SERIES



CAT. NO. PM6,
SHOWN ACTUAL SIZE

These Arrow Hart subminiature pushbuttons incorporate maximum performance, dependability and durability on an ultra-lightweight subminiature base. Ideal for electronic instrumentation, computer equipment and communication switchboard application, these switches are used wherever low energy switching reliability is required in a minimum amount of space.

- *Gold plated silver contacts for low energy reliability*
- *Leaf blade wiping action*
- *Gold anodized aluminum exposed parts*
- *Combination solder lug/quick-connect terminal*
- *Slotted sleeve*

COMMON SPECIFICATIONS

Exposed metal parts	Gold anodized aluminum
Dielectric breakdown ...	Exceeds 1000 V rms
Contact material	Gold plated silver buttons
Moving contact material .	Rhodium plated silver
Terminals	Gold flash
Base material	Molded diallyl phthalate
Contact mechanism	PM type: leaf blade with wiping action PMQ type: snap-acting butt type
Standard hardware	2 gold anodized hex nuts, 1 lockwasher, 2 locating rings (unassembled)

Body Dimensions		Circuit	Cat. No.	Action•	Button	Sleeve Length, in.	Termination
	PM3	**SPDT** **1 Amp, 115 V AC** **2 Amp, 29 V DC**	PM3	On-(On)	White Nylon	¼	Solder Lug

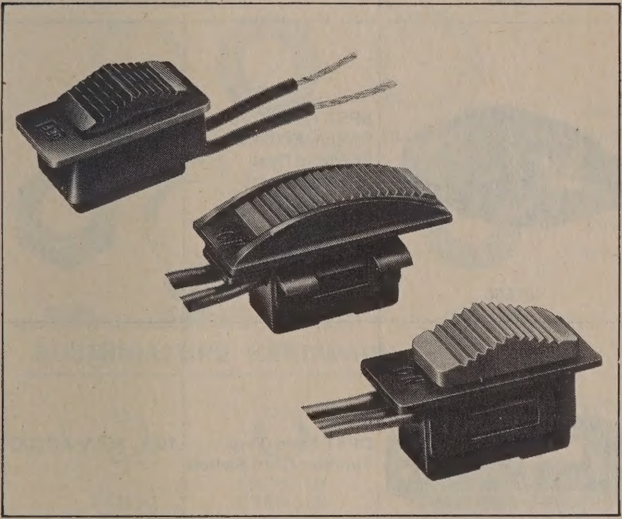
PORTABLE TOOL SWITCHES

TRIGGER & SLIDE TYPES

The Crouse-Hinds Arrow Hart Division is a leading manufacturer of controls for the Portable Tool Industry. The trigger and slide switches illustrated below are only a few of the many types presently being manufactured and shipped to OEM customers for use in their products. Some authorized Arrow Hart distributors carry many variations of these switches for replacement applications. Please consult the factory or your nearest Arrow Hart representative for complete information.

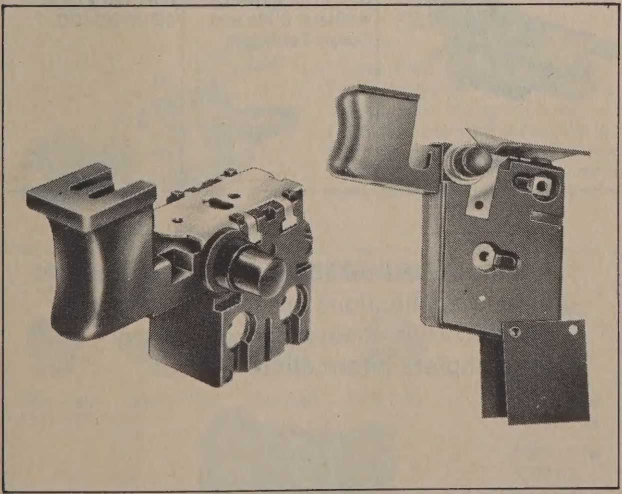
SLIDE SWITCHES

Designed expressly for fractional horsepower motors; also capable of handling tungsten lamp loads. Widely used in projection equipment, photo flood lamps, instrument panels, portable tools, vacuum cleaners and similar applications.



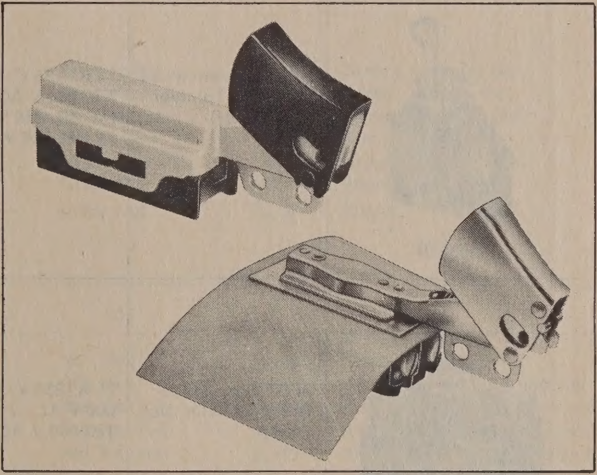
ON-OFF, REVERSING & VARIABLE SPEED SWITCHES

This family of double insulated trigger switches is designed for a broad variety of portable tool applications. These switches are available in a great number of configurations, from a simple off-on action to off-on variable speed with reversing and adjustable feature.



EXTENDED TRIGGER SWITCHES, STANDARD & HEAVY DUTY

An extensive variety of extended trigger switches for nearly any portable tool application. Current ratings range from 10 amps to 20 amps at 125 V AC. Certain types feature all-molded construction for double insulation applications. Others offer rugged metal frame and trigger construction for heavy duty use.



TANDEM INTERLOCKING SWITCHES, SLIDE & LEVER

Arrow Hart interlocking switches are widely used in heavy-duty portable tools for industrial and commercial applications. They combine a pressure lever switch and special circuitry, to allow reversing of series wound motors, or 2-speed control.

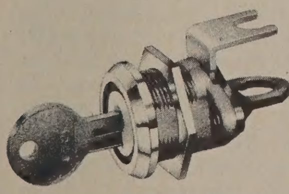
LOCKING BRACKETS FOR TOGGLE SWITCHES



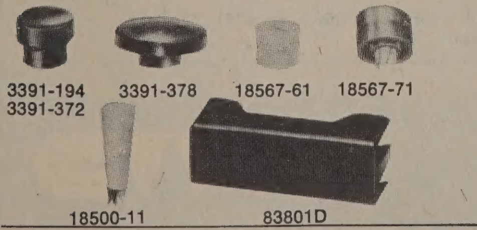
CAT. NO. 8947-400

These lock brackets provide a flexible way to convert toggle switches to rotary locking switches. All styles are high security locks. Hardware provided is 1 dress nut, 1 hex nut, 2 keys, unassembled. Individual models are keyed alike.

Cat. No.	Description
8947-400*	Key removable in counterclock position
8947-401*	Key removable in center position
8947-404*	Key removable in clockwise position
8947-405*	Key removable in either extreme position
8947-406*	Key removable in counterclock position when using AC only momentary single throw switch
8947-407*	Key removable in any one of three positions

**Replacement key is stock item. Order Catalog No. 82787-55*

MISCELLANEOUS ACCESSORIES



Cat. No.	Description	Size
3391-194	Black molded snap-on pushbutton cap	Standard - 1/2" dia.

SPECIALTY SWITCHES

GLOSSARY

ACTUATOR. Switch part to which an external force is applied to operate the switch.

ALTERNATE ACTION. (push-push). Actuator moves to a position upon application of an actuating force and remains there after the removal of the force. Application of a second actuating force is required to return the actuator to its original position.

BREAK-BEFORE-MAKE. (non-shorting). Movable contact breaks one circuit before making the next circuit.

BREAKDOWN VOLTAGE. (dielectric strength). The highest voltage the insulator can withstand without breaking down.

CONTACT BOUNCE. The time during switching in which electrical instability caused by the rebound of the contacts is observed (millisecond range).

CONTACT RATING. The capacity to carry an electrical load.

CONTACT RESISTANCE. The resistance of a pair of contacts, measured at the terminals. Typical initial values are in the range of a few milliohms. These values usually increase during life.

INSULATION RESISTANCE. (leakage resistance). The resistance between two normally insulated parts measured at specified high D.C. potential (megohm range).

LIFE EXPECTANCY. (useful life). Depends upon the end of life criteria for a specific application.

MAINTAINED CONTACT. Actuator remains in given position until it is actuated to another position, which is also maintained until further action.

MAKE-BEFORE-BREAK. Movable contact makes the next circuit before breaking the first circuit.

MOMENTARY CONTACT. Actuator returns from its operated position to its normal or free position when actuating force is removed.

NORMALLY CLOSED. Often abbreviated as N.C., indicates that the circuit is closed when the switch is not operated. Activation of the switch causes the circuit to open.

NORMALLY OPEN. Often abbreviated as N.O., indicates that the circuit is open when the switch is not operated. Activation of the switch causes the circuit to close.

OPERATING FORCE. (actuation force). The force required to transfer the switch from one position to another.

OVERTRAVEL. Distance in inches or degrees between the electrical operating position and the extreme position to which the actuator may be moved without switch damage.

POLE. Output terminal of a switch.

PRETRAVEL. Distance or angle through which the actuator moves from its free position to its electrical operating position.

THROW. Movement of a contact from one stationary point to another. A single-throw switch has a normally open or a normally closed circuit per pole. A double-throw has a normally open and a normally closed circuit per pole.

TO ORDER SPECIAL COLORS FOR BATON LEVERS

Special-color dash numbers: GREEN (-4) GRAY (-5) YELLOW (-6) BEIGE (-7)

These are normally available within two weeks of receipt of order. Additional special colors are available on large volume orders — please consult factory.

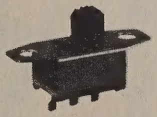
SWITCHES

CW Industries manufactures a broad variety of switches which are classified by the size of the moving contact. A single moving contact, combined with two stationary contacts, is the simplest type of switch, whereby one circuit is made or broken. Adding more moving contacts and mating stationary contacts to the switch structure produces multi-pole switches. CW makes switches having up to four poles with four switching functions which can be performed simultaneously. Adding more stationary contacts to the switch, without adding moving contacts, provides extra switch positions and allows the performance of sequential switching functions. CW also manufactures switches having up to four positions, so that with this switch four switching functions on any one pole can be performed sequentially.

Classifying CW switches by size of moving contact makes almost all fall into one of four categories: Swidget Jr., Swidget, Standard and Special Switches.

SWIDGET JR (MICRO-MINIATURE)

The smallest of all CW switches, the Swidget Jr. is designed to meet industry's demand for tiny, yet reliable, components at a moderate price. The GS-115 SPDT version occupies only 0.09 square inches of printed circuit board space. The switch body occupies only 0.02 cubic inches in volume. The double pole GS-113 occupies only 0.12 square inches of printed circuit board space and its body occupies only 0.03 cubic inches. Generally, these switches are designed to switch up to 0.5 amp AC-DC at 125 volts.



GS-111

GS-115

SWIDGET (MINIATURE)

The double pole double throw version of this switch series occupies a cross-sectional printed circuit board area of 0.25 square inches and was the smallest CW slide switch until additional customer miniaturization demands brought about the Swidget Jr. above. This Swidget series is more moderately priced than the Swidget Jr. series and is used in applications up to 8.5 amp AC, 0.5 amp DC at 125 volts.

All "Swidgets" were originally actuated from the top. For more versatility, CW engineers designed the "Sydewynder"® version of this switch which is actuated from the side. The slide switch with the actuating button emerging from the side of the switch housing has been patented by CW (patent numbers 3,270,149 and 3,461,252). CW now offers both types of Swidgets, the conventional top actuated and the side actuated "Sydewynder".

Some CW Swidgets are also available with bifurcated contacts. For most applications, the basic CW "slide and shoe" single moving contact will give reliable and long-life performance. But for some low voltage, low current circuits, the CW bifurcated moving contact may be best suited.

STANDARD

This switch series was the first of its type and was originally developed in the early part of the century. Improvements have been made throughout the years. These are the most moderately priced of all CW switches and will switch up to 13 amp AC, 0.5 amp DC at 125 volts.

As in the case of the miniature "Swidgets", these switches are available with the actuating button emerging from the side of the housing, and can be sub-classified into top actuated and side actuated "Sydewynder" switches.

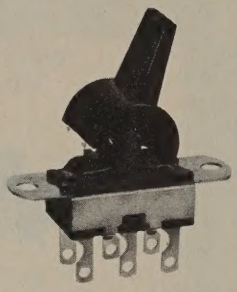
GG-350 PC

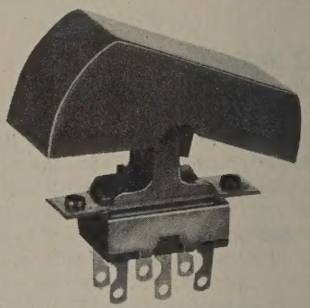
SUPERSTRUCTURES

ROCKER SWITCHES

For styling or functional purposes, many applications make actuating a switch by means of a "rocker" action rather than a "slide" action more desirable. CW has mounted to the basic slide switch assembly a support bracket and mating actuating knob that converts many basic slide switch types into "rocker" switches. Several brackets provide mounting center, mounting depth and height options. Choice of size, style, color, and finish of actuating knobs is also available.



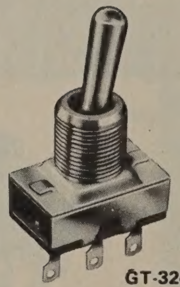
GR20-326



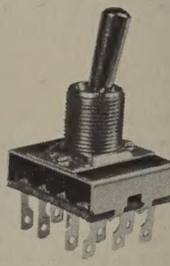
GR21-326

TOGGLE SWITCHES

A bushing and toggle arrangement can be added to many CW switch types, offering a series of toggle switches that permit the simplicity and reliability of CW switches at a price far less than a toggle switch of similar circuitry.



GT-324



GT-342

ROTARY SWITCHES

CW flexibility permits you to change many of its slide switches into rotary actuated switches with the addition of a simple superstructure.

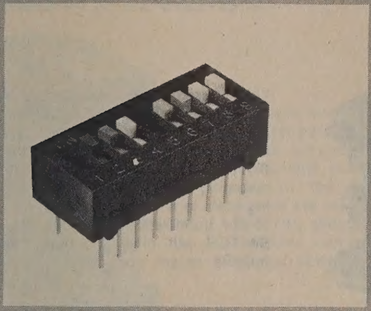
SPECIAL SWITCHES

Integral in CW's competence is its ability to meet the continuing demand of the electrical and electronics industry for new switches for new products. In most instances, this can be accomplished with effective savings in cost and time.

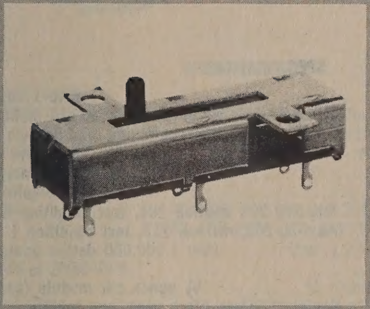
A highly developed expertise enables CW to modify a standard CW switch to answer a special construction requirement. This can be done, for example, by designing a new button, by creating a new housing or by adapting basic switch movements to individual mechanical or electrical requirements.

Whatever the switch need may be, expert CW engineers are always available for consultation . . . to help solve unique problems and, if need be, to work with customer engineers in the development of an entirely new switch for an entirely new application.



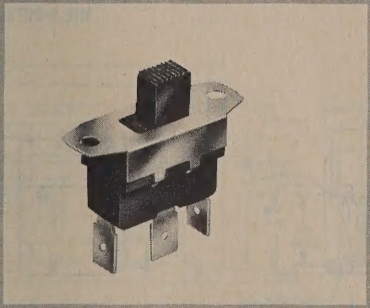
DIP SWITCH

The new CW Dip Switch is ideal for high density, printed circuit board applications requiring multi station/manual selection "on-off" switching. The spring loaded contact provides continuous wiping action. Actuating buttons are color coded for easy identification.



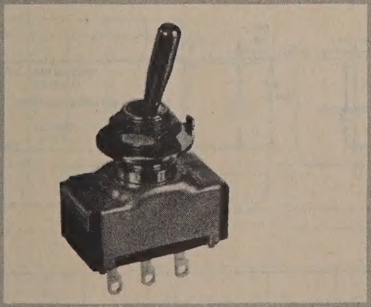
ANTENNA SWITCH

To meet the needs of TV game manufacturers and FCC requirements on isolation, CW modified its standard terminal spacing to develop the GF-226 "Antenna Switch". The increased spacing between contacts and metallic shielding on three sides allows many customers to use this switch in units which are FCC approved as Type I TV devices.



SUPER SWITCH

Designed to meet the current surge and flammability standards for "TV" rated switches imposed by Underwriters Laboratories, this switch movement is different from other CW slide switch movements. It is rated "TV-3", 15.0 amp AC at 125 volts and 3.0 amp AC at 250 volts by U.L. and Canadian Standards Association.



TOGGLE SWITCH - MINIATURE

The latest addition to the CW Family of Miniaturized Switches is ideal for applications in the instrument, appliance, industrial control and communications industries. The switch mechanism is virtually tease-proof, providing a true 2-position "on-off" action.

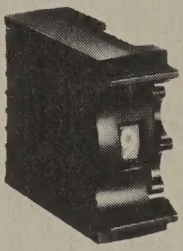
DIGITRAN® DIGITAL SWITCHES and DATA ENTRY DEVICES

SERIES 200 & 700

MINISWITCH®

8, 10, 12 DIAL POSITIONS

QPL approved to
MIL-S-22710/15 & /20



The Series 200 has potted wire lead terminations, and the Series 700 has a P/C board extending from the rear of the switch. Both can be completely sealed. The 700 Series can be furnished unsealed but with the dust proof feature for commercial or non-critical applications. Note that both are physically identical, and therefore may be mixed in one complete assembly with end mounting brackets.

SPECIFICATIONS

Operating Force	7 to 12 ounces
Rated Electrical Loads	115 volts A.C. or 28 volts D.C. at 125 milliamps. Non-switching load 3 amps max.
Initial Contact Resistance	(Series 200) 0.2 ohms max. (Series 700) 0.1 ohms max.
Insulation Resistance	1000 megohms
Dielectric Strength	750 volts RMS
Vibration	MIL-STD-202 method 204, test condition B 15G
Shock	MIL-STD-202, method 213, test condition 1 100G
Life	Over 1,000,000 detent operations
Operating Temperature	—65°C to +85°C
Weight	2/5 ounce per module (approx.)
Standard Color	Non-glare, matte black case and end brackets. Satin black wheel and dial with white characters.
Dial Character Height	0.170 (8 or 10 position)
Moisture Resistance	Per MIL-STD-202, method 106
Thermal Shock	Per MIL-STD-202, method 107, test condition A
Salt Spray	Per MIL-STD-202, method 101, test condition B
Series 200 and 700 are QPL approved to	MIL-S-22710C/15
Series 700 dual lamped units are QPL approved to	MIL-S-22710C/20

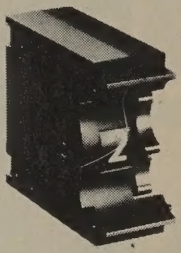
SERIES 8000

MINISWITCH®

8, 10, 16 DIAL POSITIONS



This switch is a miniaturized version of the Series 300 DIGISWITCH. It is mounted from the rear of the panel with four mounting screws and, like the DIGISWITCH, can be grouped with end mounting brackets into as many switching units in a row as desired. Like most of our thumbwheel switches, the MINISWITCH will give you over 1,000,000 reliable detent operations.

SPECIFICATIONS

Operating Force	6 to 11 ounces
Rated Electrical Loads	115 volts A.C. or 28 volts D.C. at 125 milliamps. Non-switching load 3 amps max.
Initial Contact Resistance	0.1 ohms max.
Insulation Resistance	1000 megohms

DIGITAL SWITCHES and DATA ENTRY DEVICES

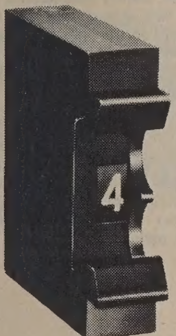
DIGITRAN®

SERIES 300

DIGISWITCH®

8, 10, 12, 16 DIAL POSITIONS

QPL approved to MIL-S-22710/11



This one module shown is our standard, general purpose unit. When grouped together with end brackets, the assembly is installed through a cut-out from the rear of the panel. Simple mounting screws are required. Note that the DIGISWITCH, which is the largest of all our switches, can be supplied with up to 16 dial positions.

SPECIFICATIONS

Operating Force	7 to 10 ounces
Rated Electrical Loads	28 volts A.C. or 28 volts D.C. at 125 milliamps. Non-switching load 3 amps max.
Initial Contact Resistance	0.1 ohms max.

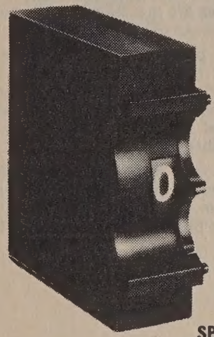
SERIES 9000 & 19000

DIGISWITCH®

8, 10, 12, 16 DIAL POSITIONS

SERIES 9000, QPL approved to MIL-S-22710/12



All switching characteristics are the same as the Series 300 above, only these two modified standards are sealed as follows:

The Series 9000 is completely sealed. Excellent for use on machines or equipment that are exposed to heavy concentrations of liquids such as oils or water. Further, on, you will see that our MINI-SWITCH also comes in a sealed version. Consider this, however, if your application requires the operator to wear heavy protective gloves, this larger (.6" wide) switch might be more practical. The Series 9000 is QPL approved to MIL-S-22710.

Series 19000 is unsealed, but is considered "dust proof".

SPECIFICATIONS

Operating Force	7 to 10 ounces
Rated Electrical Loads	28 volts A.C. or 28 volts D.C. at 125 milliamps. Non-switching load 3 amps max.

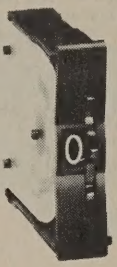
DIGITRAN® DIGITAL SWITCHES and DATA ENTRY DEVICES

SERIES 23000

"SNAP-IN" SLIMSWITCH

10 DIAL POSITIONS



Our newest addition to the MINISWITCH line. Series 23000 is the economy leader of the digital switch industry. They cost less to buy, less to assemble, less to install. They conserve panel space, too. Using our unique assembly strap, switch assemblies are quickly and easily put together without using tools.

SNAP-IN panel mounting eliminates the need for installation hardware and tools and allows you to relax panel cut out tolerances. The molded-on bezels cover irregular panel cut outs, chipped paint and surface abrasions.

Switch module width is only .315" (8mm) so you can put more switches into a given space with better readability. That's why we call the Series 23000-the SLIMSWITCH.

SPECIFICATIONS

Operating Force	4 to 8 ounces
Rated Electrical Loads	28 volts A.C. or 28 volts D.C. at 50 milliamps resistive, at 25°C (77°F). Non-switching current limit: 2 amps
Initial Contact Resistance	0.1 ohms max.
Insulation Resistance	1000 megohms
Dielectric Strength	500 volts RMS
Vibration	5 G's 70-2000 cps; .06 in. double amplitude, 10-70 cps
Shock	100 G's, 6 millisecond duration, sawtooth.
Life	Over 1,000,000 detent operations at 25°C (77°F)
Operating Temperature	−20°C to 65°C
Standard Color	Case, wheel and end brackets, black or Grey semi-matte as molded. Dial markings, white on black or black on Grey hot-stamped per detail specifications.
Dial Character Height	0.170"

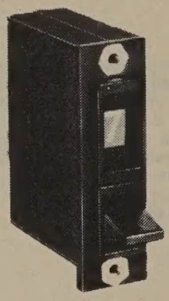
SERIES 24000

DIGILEVER®

10 DIAL POSITIONS

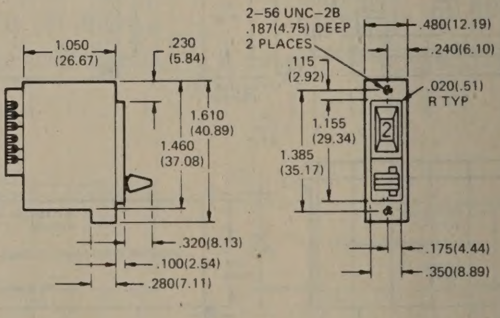
QPL approved to MIL-S-22710/24

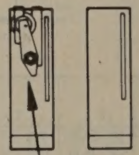


Brand new for 1972. This little toggle or paddle handle switch mounts in a panel cut-out with two screws. You can mount a row of them in one large cut-out, or mount them in a series of individual cut-outs. By actuating the toggle in either direction, the digits click in view, in sequence. And, you will like the short arc between each position. It's faster than ordinary toggle and thumbwheel switches. The front face is completely sealed so that with a mounting gasket, your equipment will be properly protected against contamination from the front of the panel.

SPECIFICATIONS

Operating Force	15 to 30 ounces
Rated Electrical Loads	28 volts D.C. at 125 milliamps. Non-switching load 3 amps max.
Initial Contact Resistance	< 100 milliohms between common terminal and output terminal
Insulation Resistance	1000 megohms
Dielectric Strength	750 volts RMS
Vibration	MIL-STD-202 method 204, test condition B 15G
Shock	MIL-STD-202, method 213, test condition 1 100G
Life	Over 1,000,000 detent operations
Operating Temperature	−65°C to +75°C
Weight	3/5 ounce per module (approx.)
Standard Color	Non-glare black. Dial: Satin black. Dial Markings: White.
Dial Character Height	0.200"
Moisture Resistance	Per MIL-STD-202, method 103
Thermal Shock	Per MIL-STD-202, method 107, test condition A
Salt Spray	Per MIL-STD-202, method 101, test condition B
QPL approved to	MIL-S-22710/24





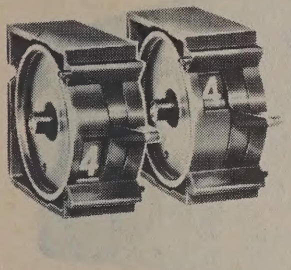
VIEW WITH LAMP ATTACHMENT

DIGITRAN®

SERIES 28000

MINILEVER®

10, 12 DIAL POSITIONS



The MINILEVER is a comparatively new innovation to thumbwheel switches. Each module is actuated by a geared type lever. By moving the lever in either direction, you can instantly position the digits from zero (0) to ten (10), or zero (0) to twelve (12). For instance, they have been used on credit checking machines. The operator can set up the customers' credit card number rapidly, then push a button and check the customers' credit. He can then instantly reset all digits back to zero with one sweep of the hand. We also have a special version where the reset of all digits back to zero is done with one separate lever. A great switch for peripheral computer equipment.

SPECIFICATIONS

Operating Force	4 to 8 ounces
Rated Electrical Loads	28V (D.C.), 50 m.a. per common terminal. Non-switching current limit: one amp. All specs applicable after life at rated load.
Initial Contact Resistance	0.1 ohms max.
Insulation Resistance	1000 megohms
Dielectric Strength	500 volts RMS
Vibration	MIL-STD-202 method 204, test condition B 15G
Shock	MIL-STD-202, method 213, test condition 1 50G
Life	Over 1,000,000 detent operations
Operating Temperature	—40°C to +71°C
Weight	½ ounce per module (approx.)
Standard Color	Case, end brackets, detent lever: Non-glare black. Dial: Satin black. Dial Markings: White.
Dial Character Height	0.200 (10 or 12 position)

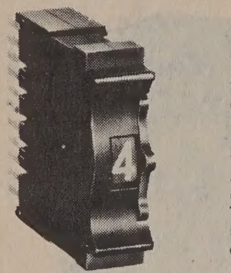
SERIES 29000

ECONOMY MINISWITCH®

10, 12 DIAL POSITIONS



Here is our new little money saver. Although slightly derated electrically from our Series 8000 MINISWITCH, certain mechanical and material changes have reduced the selling price considerably without reducing quality. If you have an application where the ultimate in low cost is mandatory, this is the switch. This switch is also sealed against normal exposure to dust and other dry contaminants.

SPECIFICATIONS

Operating Force	4 to 8 ounces
Rated Electrical Loads	28 Vac or 28 Vdc at 50 m.a. at 25°C (77°F). Non-switching load 2 amp max.
Initial Contact Resistance	0.1 ohms max.
Insulation Resistance	1000 megohms
Dielectric Strength	500 volts RMS
Vibration	15 G's 70-2000 cps; .06 in. double amplitude, 10-70 cps
Shock	100 G's, 6 millisecond duration, sawtooth.

DIGITRAN® DIGITAL SWITCHES and DATA ENTRY DEVICES

SERIES 41000

LED-LIGHTED MINISWITCH®

10 DIAL POSITIONS

THE DIGITRAN COMPANY is proud to announce the first in a series of LED-lighted digital switches: the Series 41000 MINISWITCH.

In addition to eliminating most of the cost and all of the inconvenience of incandescent-lighted switches, the new Series 41000 is designed for ease of assembly and eye-appeal, with all snap-together construction and a unitized front panel appearance. Switch modules may be either front- or rear-mounted, and no visual separation between modules is evident because of a front-panel snap-on bezel.

Interchangeable with conventional 8 mm (.315") wide digital switches, the LED-lighted Series 41000 eliminates bulb replacement and installs in minutes without straps or hardware. Unlike incandescent-lighted switches, where the lighting subsystem often doubles the cost of the switch assembly, Digitran's new Series 41000 switches, complete with LED lighting, are comparable in price with un-lighted competitive switches.

The new Series 41000 is offered with red or clear LED lighting, with ten dial positions and in all popular standard codes. And as an optional feature the Series 41000 can be ordered with low-cost pin terminals for printed circuit board mounting.

DESIGN

Simplicity is the keynote of the Series 41000's design — it has few parts, its LED lighting uses less power, and it can be snapped together quickly for mix-and-match versatility — all resulting in an efficient, cost effective design.

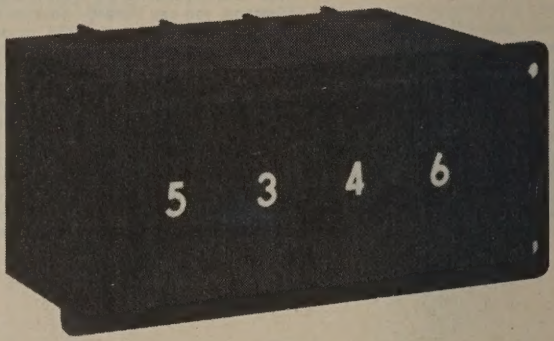
SPECIFICATIONS

Mechanical and Electrical	
Operating Force	4 to 10 ounces
Life	Over 1,000,000 detent operations at 25°C.
Weight	¼ ounce per module (approx.)
Dial Character Height	0.170"
Standard Finish and Colors	Bezel: Molded matte black; Case and Wheel: Black; Dial: Matte black background with translucent white characters
Rated Electrical Loads	125 milliamps at 28 VAC or 28 VDC. Non-switching load 2 amps.
Contact Resistance	0.100 ohms max. initial, 0.200 ohms max. after life test.
Insulation Resistance	1000 megohms min.
Dielectric Withstanding	500 VRMS
Lighting (optional)	
Internal LED Standard Colors	Clear and Red
Environmental	
Operating Temperature	−20°C to +65°C (−40°F to +149°F)
Storage Temperature	−40°C to +85°C (−40°F to +185°F)
Moisture Resistance	1 megohms min. insulation resistance after 10-day soak at 90%-95% relative humidity.

SERIES 43000

LED-LIGHTED MINISWITCH®

10 DIAL POSITIONS



THE DIGITRAN COMPANY is proud to announce the second in a series of LED-lighted digital switches: the Series 43000 MINISWITCH.

In addition to eliminating most of the cost and all of the inconvenience of incandescent-lighted switches, the new Series 43000 is designed for ease of assembly and eye-appeal, with all snap-together construction which requires no tools and very little time for switch assembly.

Interchangeable with conventional .500" (12.7 mm) wide digital switches, the LED-lighted Series 43000 eliminates bulb replacement and installs in minutes. Unlike incandescent-lighted switches, where the lighting subsystem often doubles the cost of the switch assembly, Digitran's new Series 43000 switches, complete with LED lighting, are comparable in price with un-lighted competitive switches.

The new Series 43000 is offered with red or clear LED lighting, with ten dial positions and in all popular standard codes. And as an optional feature the Series 43000 can be ordered with low-cost pin terminals for printed circuit board mounting.

DESIGN

Simplicity is the keynote of the Series 43000's design — it has few parts, its LED lighting uses less power, and it can be snapped together quickly for mix-and-match versatility — all resulting in an efficient, cost effective design.

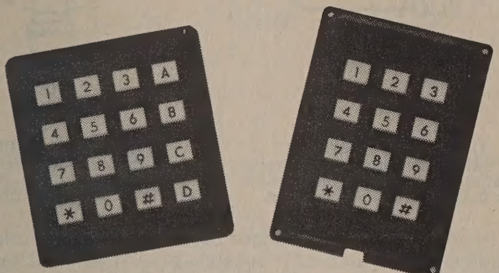
DIGITAL SWITCHES and DATA ENTRY DEVICES DIGITRAN®

SERIES KL
MINIKEY

LOW PROFILE KEYBOARDS
12 OR 16 KEY MATRIX



LOW PROFILE...
MINIKEYS are less than 5/16" high from the top of the key to the rear suface, yet key stroke is almost 1/16".

TACTILE FEEL...
Key operation is positive, natural and quiet. . .the ideal "tactile feel" for keyboards of this type.

RELIABILITY...
MINIKEYS are made to last over 1,000,000 operations per key, (MTBF) when switching a 50 milliamp resistive load at 28VDC. Precious metal contacts ensure contact closure and reliable performance in "dry circuits" and "logic circuits".

VERSATILITY...
MINIKEYS may be used just about anywhere Key operated data entry is required.

● Front or real of panel mounting versions available. ● Frame and key colors may be specified by the user, at extra cost. ● Special key legends may be specified by the user, at additional cost. ● Two basic frame designs provide the user with a maximum of 12 Keys in a 3 x 4 Key matrix or 16 Keys in a 4 x 4 Key matrix. ● Electrical terminations with Pin terminations are standard. Special terminations provided at additional cost. ● Touch Tone* versions available. ● A moisture barrier protects the contacts.

SPECIFICATIONS

Electrical Data	
Contact rating	50 ma @ 28VDC resistive
Contact resistance	500 milliohms max @ .2 ma @ 17VDC
Insulation resistance	250 megohms min.
Dielectric Strength	250 VAC min @ 60Hz
Contact bounce	3 milliseconds, max.
Operating life	1,000,000 operations per Key, MTBF, @ 28VDC, 50 milliamp resistive load
Mechanical Data	
Terminations	Per detailed specifications
Key actuation force	90 ±30 grams
Key travel	.050" nominal
Key overtravel	30% of Key travel, nominal
Materials & Finishes	
Keytops	2-shot molded ABS with white keys and black legends are standard.
Housing	Molded ABS, black with textured finish is standard.
Environmental Data	
Operating temperature	+32°F, (0°C) to +131°F, (+55°F)
Storage temperature	–40°F, (-40°C) to +160°F, (+71°C)
Relative humidity	0 to 95% (Non-condensing)

*Touch Tone is a registered Trademark of A T & T.

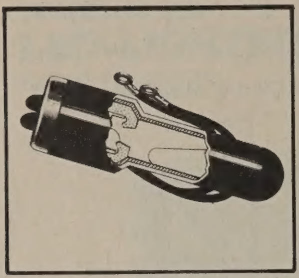
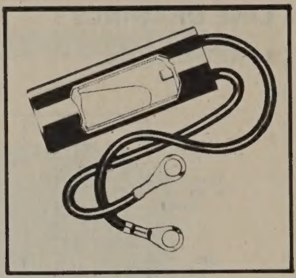
durakool®

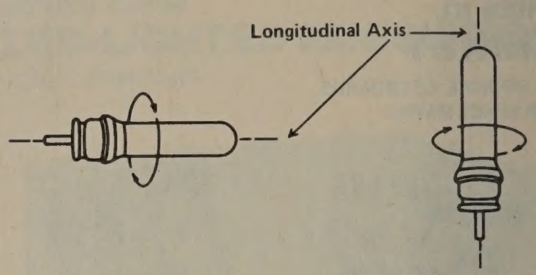
TILT & TIP OVER SWITCHES



Mercury-to-Mercury
Contacts are made and broken through two pools of mercury; clean snap-action, no chatter, little erosion.



Mercury-to-Metal
Contacts are made and broken between a pool of mercury and a metal electrode.



Tilt Switch Mounting
Tilt switches mount horizontally. Rotation around the longitudinal axis does not affect operation.

Tip Switch Mounting
Tip switches mount vertically. Rotation around the longitudinal axis does not affect operation.

All Durakool switch products are of all-steel construction providing compact size and high structural strength. Contact areas are confined within an arc suppressing gas in the hermetically sealed switch body. The absence of moving mechanical parts virtually eliminates wear and contact degradation, assuring long life and consistent switching functions.

In addition to the standard tilt and tip over switches listed, Durakool manufactures thousands of custom switches for specific OEM applications. Special angle, make and break requirements and leaded types are available on special factory order.

THE MASTER CATALOG
THE ELECTRONIC DISTRIBUTORS MASTER CATALOG
'78
FORMERLY: OFF-THE-SHELF CATALOG
THE ONLY NATIONAL CATALOG OF ELECTRONIC PARTS, INSTRUMENTS AND EQUIPMENT DESIGNED EXCLUSIVELY FOR DISTRIBUTORS AND THEIR CUSTOMERS.

YESTERDAY'S RADIO MASTER IS TODAY'S

ELECTRONIC DISTRIBUTORS MASTER CATALOG

Known as O-T-S, OFF-THE-SHELF CATALOG until this edition, the MASTER CATALOG encompasses the following product areas: audio and communications equipment; electromechanical components; electronic circuit components and subassemblies; panel components and hardware; production equipment and tools; test instrumentation; power sources; wire and cable; and related materials and chemicals.

The MASTER CATALOG is broken down into four basic sections. **A GENERAL INDEX** which lists manufacturers and products alphabetically. **A MANUFACTURERS' CATALOG SECTION** which displays their respective product pages and lists their addresses and phone numbers. **A MANUFACTURERS' DIRECTORY,** where participating manufacturers, again listed alphabetically with addresses and phone numbers, highlight their distributors. And a **GEOGRAPHIC DISTRIBUTORS' DIRECTORY** which includes the names, addresses and phone numbers of the local distributors nationwide which stock the products of manufacturers whose data appears in the "Manufacturers' Catalog Section."

GENERAL SWITCH SPECIFICATIONS:

Technical specifications apply to all Electro-Mech Switch models unless otherwise specified:

- **Ratings:** 30 Volts DC or 15 Volts AC; 2 amps resistive; 1 amp inductive
- **Weight:** 0.8 oz. (approx.)
- **Operating Pressure:** 2 lbs. +1 lb.
- **Plunger Travel:** 3/16" (approx.)
- **Actuations:** 100,000
- Accommodates all **"switchlines"** standard lenses. Uses one T1-3/4, AN3140-327, 328, 330 bulb or neon lamp. 3 actuation modes standard also in 2, 3, 4 and 6-pole configuration.

SWITCHLINE *and* SLIMLINE SWITCHES

1PST-2PDT *SERIES 2150*

A new 2100 Series Slimline version of our standard Illuminated Pushbutton Switch featuring silver slide bar action. Add BR after part number for mounting on 5/8" centers. Utilizes AN3140-T 1-3/4 or ALC-100 bulb. All other specifications same as standard.

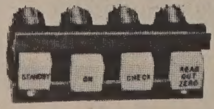
SUB-PANEL/INTERLOCKING SWITCH ASSEMBLIES

SERIES 400

Multi-station switch assemblies designed for sub-panel mounting by means of a flanged "U" channel. All standard ELECTRO-MECH switches can be incorporated with several types of mechanical interlocking/lockout actions between stations. Up to 12 stations in one or two row configurations.



STANDBY
ON
CHECK
READ OUT ZERO

SERIES 500

Added beauty and long-lasting appearance with handsome chrome barriers between each switch or indicator. Independent or interlocking action. Ten types of tracking action and switching sequences. Up to 12 switches in single or dual row, 7/8" or 1" centers.

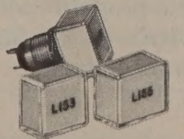
10 AMP *Series 4000* DPST-2 N.O.

for U.L. Applications

Low profile matches standard industry models. Momentary or Alternate Action design takes any standard lens size. 30 VDC or 115 VAC, 10 A Resistive, 5 A Inductive.

INTERCHANGEABLE LENSES/*FILTERS*

Series 150



Displays may be changed or buttons replaced. Non-wearing, clear-acrylic lens and filter buttons. Available in standard, Opaque or Contour.

What can I use to keep all the manufacturers' product data I receive in order?
What system makes filing or retrieving manufacturers' catalogs fast and easy?
Which file system have thousands of engineers purchased because they know it works?

eem FILE SYSTEM

THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

Here's how to order your eem FILE SYSTEM:

For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:

United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

United Technical Publications, Inc., Div. of Cox Broadcasting Corp. • 645 Stewart Ave., Garden City, N.Y. 11530

ROTARY POWER SWITCHES

DETENT SWITCHES ▸

10 to 30 amp . . . Standard and Miniaturized versions . . . up to 600V . . . up to 75 poles . . . 2 to 16 positions. Excellent for selection and control circuits. Most have UL & CSA approvals . . . military equivalents.

MERCURY FILM SWITCHES

- OPERATE IN ALL POSITIONS
- TWO BILLION CYCLE RELIABILITY
- NO CONTACT BOUNCE
- STABLE CONTACT RESISTANCE

- **LONG LIFE**
  Self healing mercury contacts are coupled with an almost foolproof energizing mechanism to eliminate contact and frictional wear.

- **HIGH RELIABILITY**
  Operation joins two mercury films. There are no contact interfaces to impede signal passage. Over 2 Billion Cycle MCBF.

- **NO CONTACT BOUNCE**
  Mercury contacts are joined without bounce or noise in a perfect electrical closure.

- **OPERATION IN ANY POSITION**
  A patented design uses strong surface tension forces to hold mercury films securely to wetted surfaces regardless of position.

- **LOW AND STABLE CONTACT RESISTANCE**
  Mercury contacts are renewed with every operation. Contact resistance is low, stable, and independent of load being switched.

- **HIGH STAND-OFF VOLTAGE**
  Large contacts gaps provide 1250 VAC breakdown ratings. A near perfect hermetic seal assures that it will last the life of the switch.

- **RUGGED CONSTRUCTION**
  Perhaps the strongest switching capsule ever made. A sample has literally been hammered into a wooden plank without structural damage. Danger from mercury leakage is eliminated.

- **PERMANENT MAGNET OR COIL ACTUATION**
  Versatile design permits updating all applications where dry reed, or mercury wetted reed, switches have been used in the past.

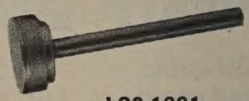
- **LOW IN COST**
  Priced to serve almost any application LC2 now allows the use of high reliability switching in cost conscious circuits.

- **CONTACT FACTORY**
  For information and test data on our complete line of mercury film switches and relays.

SPECIFICATIONS

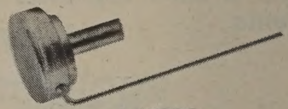
Contact Form	Form 'A' SPST-NO(1)
Life	Indefinite
Reliability (MCBF)	$> 2 \times 10^9$ (2)
Rated Contact Load (DC)	5V, 2 amps 24V, 1 amp 200V, 0.1 amps
Contact Resistance	0.15 ohms
Contact Resistance Stability	±0.015 ohms
Contact Breakdown	1250 VRMS
Contact Bounce	None

NOTES: (1) Contact factory for Form B; Form C; and latching models.
(2) Based upon tests conducted on over 100 units tested to over 3.4×10^{10} operations.
(3) Contact factory for higher voltage models.



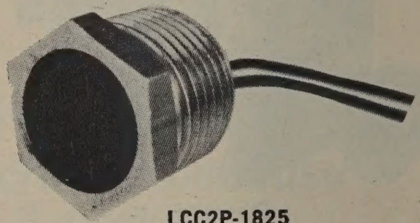
LC2-1091

The basic mercury film switch. It may be operated by a permanent magnet or a coil.



LC2SPC

A miniature version of the LC2 designed for direct PCB mounting. Magnet actuated.

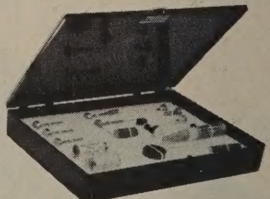


LCC2P-1825

A rugged encapsulated LC2 housed in a brass fitting that matches a ⅜-18NPT threaded conduit. Magnet actuated.

LC2P-1823

An encapsulated LC2 package with mounting screw slots. Magnet Actuated.



ENGINEERING DESIGN KITS

The two design kits detailed below are intended to give the engineer an insight into the capabilities of mercury film switching. Each kit may be purchased from the factory for $49.00 each.

DK1-2328 — Contains samples of various mechanical configurations of the LC2 switch. Mounting hardware, typical permanent drive magnets and complete documentation are included.

DK2-2329 — Demonstrates the range of ampere turn sensitivities normal to the production output of the switch. A test coil is provided. This kit is helpful in order to determine if selected switch sensitivities are required to serve your application. Complete documentation is included.

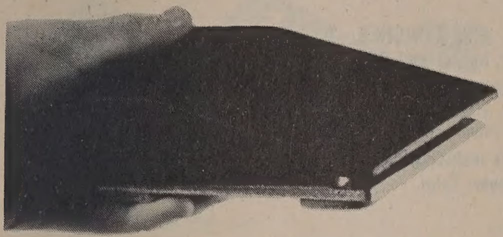
SOLID STATE COMPATIBLE FOOT SWITCH

- No Contact Bounce
- Billion Cycle Reliability
- Hermetically Sealed Self Healing Contacts
- Resistance Stable to 0.015 OHMS
- No Signal Distortion
- Will Switch NANO-AMPS or 2.0 AMPERES with Equal Reliability
- Features use of LC2 Mercury Film Switching Capsule Described eem Page 4072 (1977)



FP 1830

No contact bounce, self healing contacts. Sealed contact chamber excludes contamination while protecting volatile atmospheres from electrical arcs. Contact resistance that varies less than 0.015 ohms over life even when switching nano-amps. The FP 1830 is highly compatible with solid state signals.

APPLICATIONS IN MEDICAL ELECTRONICS;
SOPHISTICATED INSTRUMENTATION;
COMPUTER CONTROL

TOP ACCESS ROCKER DIP SWITCHES

SPECIFICATIONS

Mechanical Life: 50,000 Operations per Rocker.

Make and Break Current Rating: 35,000 Operations at 50 MA, 30 VDC; 25,000 Operations at 125 MA, 30 VDC.

Contact Resistance: 100 Milliohms Maximum after life (30 Milliohms initially), measured at 2MA DC and 50 MV (open circuit).

Insulation Resistance (at 100 VDC): Between Adjacent Open or Closed Contacts: 50,000 Megohms after life, (100,000 Megohms initially).

Dielectric Strength: Between Adjacent Open or Closed Contacts: 500 VAC after life (750 VAC initially).

Current Carry Rating: 5 Amps with a maximum contact temperature rise of 20° C.

MATERIALS AND FINISHES

Switch Cover, Rocker and Base: Polyester.

Base Seal: Epoxy.

Shorting Bar: Brass, Gold plated .00001″ minimum over Nickel plated .00005″ minimum.

Base Contacts including Terminals: Brass, Gold plated .00001″ minimum.

Protective Cover: Zytel.

RATING:

Rating at 115 VAC Resistive: 10 Amps.
Contact Resistance: Less than 25 milliohms on new switch.
Voltage Breakdown: 1,000 VAC between mutually insulated parts.
Insulation Resistance: 1,000 megohms minimum.
Life Expectancy: 25,000 operations.

OPERATING FEATURES:

Circuitry: SPST and SPDT, momentary contact. Audible "Click" is produced by the snap action mechanism featuring extremely fast make and break, minimum contact "bounce."
Total Button Travel: .065" approximately.
Overtravel: .008" approximately.
Actuating Force: 36 ounces approximately.
Mounting Hole: 31/64"
Terminal Type: Solder. Also available with FASTON Terminals.

ORDERING INFORMATION:

THE DECORATOR LINE OF PUSHBUTTON SWITCHES

Grayhill®

LIGHTED DECORATOR LINE PUSHBUTTON SWITCHES ARE DESIGNATED AS THE GRAYHILL SERIES 80 SPST, SPDT, DPDT CIRCUITRY

CONTACTS: Wiping type.

CURRENT RATING AT 115 VAC RESISTIVE: ¼ amp.

CONTACT RESISTANCE: Less than 25 milliohms on a new switch.

VOLTAGE BREAKDOWN: 1,000 VAC between mutually insulated parts.

INSULATION RESISTANCE: 1,000 megohms minimum.

LIFE EXPECTANCY: 250,000 operations.

LAMPS: All button caps accept standard T-1¾ midget flange base lamps. Lamps are not supplied with button caps or assemblies of caps and switches.
It is recommended that the lamp used in these switches be rated at 0.34 CP to provide sufficient illumination.

PART NUMBERS FOR SWITCH WITH BUTTON CAP:

LEGENDS: All ½″ square button caps can be legended to order. Applicable to the Series 80 lighted switches and the Series 30 and 46 unlighted switches.
All ½″ round button caps can be legended to order. Applicable to the Series 80 lighted switches. Note: The ⅜″ round button caps used on the Series 30 and 46 unlighted switches are concave to provide for finger fit and cannot be legended.
Contact factory for legend styles and limitations.

UNLIGHTED DECORATOR LINE PUSHBUTTON SWITCHES ARE DESIGNATED AS THE GRAYHILL SERIES 30 OR 46. SERIES 30, SPST CIRCUITRY

CONTACTS: Butt type.

RATING AT 115 VAC RESISTIVE: 1 amp.

CONTACT RESISTANCE: 25 milliohms or less on a new switch.

VOLTAGE BREAKDOWN: 1,000 VAC between mutually insulated parts.

INSULATION RESISTANCE: 1,000 megohms minimum.

LIFE EXPECTANCY:

Circuitry	Operations
SPST (N.O.)	1,000,000
SPST (N.C.)	
SPST (N.O., with Overtravel)	500,000
SPST (N.O., Positive Feel)	200,000

SERIES 46 — SPDT OR DPDT CIRCUITRY

CONTACTS: Wiping type.

CURRENT RATING AT 115 VAC RESISTIVE: ¼ Amp.

CONTACT RESISTANCE: Less than 25 milliohms on a new switch.

VOLTAGE BREAKDOWN: 1,000 VAC between mutually insulated parts.

INSULATION RESISTANCE: 1,000 megohms minimum.

LIFE EXPECTANCY: 250,000 operations.

SWITCH SELECTION:

Series 30 — 1 Amp Rating (Circuitry 01, 02, 03 & 04)
Series 46 — ¼ Amp Rating (Circuitry 05, 07, 08, & 09)

SPECIFICATIONS AND ORDERING INFORMATION

RATING:

Rating At 24 VDC: 10 milliamps, resistive.
Contact Resistance: Compatible with MOS, TTL and DTL.
Voltage Breakdown: 250 VAC between mutually insulated parts.
Life Expectancy: 3,000,000 operations per button.
Contact Bounce: 4 milliseconds at make, 10 milliseconds at break typical.

MATERIALS AND FINISHES:

Housing: ABS Plastic (Black).
Button: ABS Plastic (White with Molded-in Black Legend).
Terminals: Brass, Tin Plated.

OPERATING FEATURES:

Button Travel: 0.015″ nominal, total travel.
Pretravel: 0.012″ nominal.
Operating Force: 220 ± 40 grams initially.

ORDERING INFORMATION:

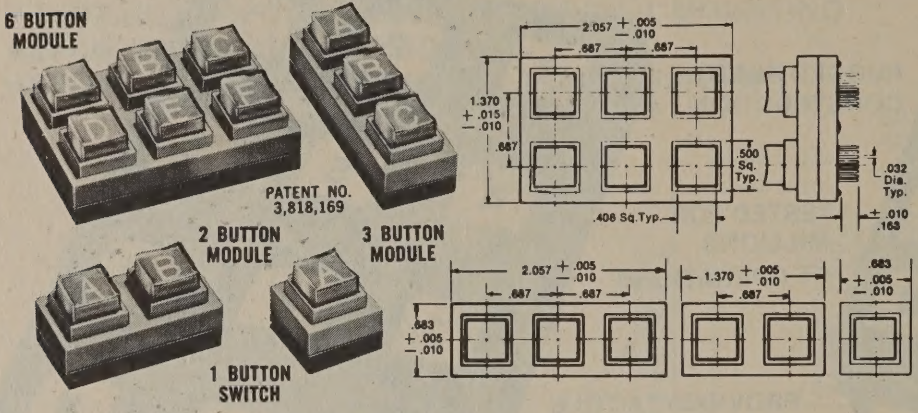
Grayhill®

PUSHBUTTON SWITCH MODULES PC MOUNTABLE—SERIES 82

SELF-GENERATED LOGIC, 1 TO 4 POLES PER BUTTON, WIDE CHOICE OF CIRCUITRY STACK IN ANY ARRAY, CHOICE OF COLORS, CHOICE OF LEGENDS



RATING:

Rating at 5 VDC: 100 milliamps. **Life Expectancy:** 1,500,000 operations.
Contact Resistance: 25 milliohms or less on a new switch.
Voltage Breakdown: 250 VAC between mutually insulated parts.
Insulation Resistance: 1,000 megohms minimum.

OPERATING FEATURES:

Button Travel: 0.130" total travel. **Overtravel:** 0.080".
Operating Force: 4-7 ounces (dependent on number of poles).

MOUNTING:

Modules are designed to plug into any printed circuit board from $\frac{1}{16}$" to $\frac{1}{8}$" thick. Modules can be stacked horizontally or vertically for any combination of button array and still maintain $\frac{11}{16}$" button centers.

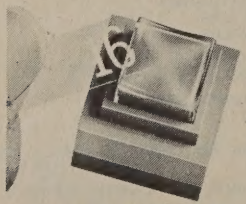
7-WIRE CODE CAPABILITY UNDER EACH BUTTON

The GRAYHILL Series 82 Pushbutton Modules represent the most versatile switches now available to generate coded outputs for control systems of all kind: The capabilities are practically endless since any code up to 7-wire can be accomplished right in the switches. CONTACT FACTORY.

LEGENDS:

Hot stamped, two-shot molded, or field-legendable with easy slip-ins. Standard telephone legend configuration and many other typical legends readily available.

SERIES 82 PUSH BUTTON MODULES WITH INSERTABLE LEGENDS



For prototype and small quantity usage. Switches are available with clear protective cap slotted on one side to allow the insertion of a clear plastic tab imprinted with the legend. A legend sheet is available with all normally required legends for both vertical and horizontal mounting.

Legend sheet is sold separately, GRAYHILL Part No. 82-AC-2017. Contains white legends 0-19, A-Z, and all other normally used symbols and word groups. Simply cut out and insert in slotted button.

ORDERING INFORMATION:

For hot stamped or two shot molded button.
To order a Series 82 pushbutton module, there are five areas in which information is required:

1. Type of Module: 1-, 2-, 3-, or 6-button.
2. Type of Mounting: Either horizontal or vertical.
3. Circuitry required for each button (A=SPST; B=2PST; C=3PST, etc.)
4. Color for each internal button (GRAY is standard; other available colors are WHITE, RED, GREEN, and BLACK. Colors can be intermixed. For example, Buttons A thru E are GRAY and F is WHITE.)
5. Legending required on buttons (Button A legend #1, Button B legend #2, etc.)

Upon receipt of your order, a part number will be assigned to facilitate future identification of this part. These numbers are sequentially assigned as the need arises and are non-descriptive.

PRICES:

With hot stamped or Two shot molded buttons, contact GRAYHILL.

STANDARD TELEPHONE LEGEND (Reference Picture Above) TWO SHOT MOLDED BUTTONS

TOP SIX BUTTONS

Chart shown for non-shorting contacts (break before make). Voltage: 115 VAC or 30 VDC, resistive load.

One cycle is 360° rotation and a return through all switch positions to the starting position. The data for the above curve was measured at sea level, 25°C. and 68% relative humidity with the following life limiting criteria.

Contact Resistance: 50 milliohms maximum. (15 milliohms initially).

Insulation Resistance: 10,000 megohms minimum between mutually insulated parts. (50,000 megohms initially.)

Voltage Breakdown: 500 VAC minimum between mutually insulated parts.

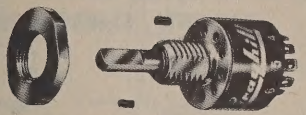
1/2" DIAMETER, SINGLE DECK ROTARY SWITCHES — SERIES 50, 51

Grayhill®

ADJUSTABLE STOPS



Adjustable stop versions of the Series 50 and 51 Rotary Switches are readily available from local distributor stock. The adjustable stop versions are form, fit and function equivalents to their fixed stop counterparts. Adjustable stop Series 50 and 51 Rotary Switches can be provided in all angles of throw and with or without shaft and panel seal. Contact your local distributor or GRAYHILL for cross reference information between fixed and adjustable stop switches.

45°, 60° OR 90° ANGLES OF THROW

The Series 50 Rotary Switch is also available with 45° (8 position), 60° (6 position) or 90° (4 position) angles of throw. These angles of throw are available with 1 or 2 poles per deck, solder lug or PC mount terminals, with or without shaft and panel seal, fixed or adjustable stops and in standard or military types.

22½° ANGLE OF THROW

The Series 51 is now available in a 22½ angle of throw, 16 position switch. It is rated to make and break 100 MA for 10,000. The contact resistance is 50 milliohms (10 milliohms initially). Voltage breakdown is 400 VAC minimum between mutually insulated parts. It comes in solder lug and PC terminals and with 1 or 2 poles. Contact GRAYHILL for complete electrical, dimensional, part number and price information.

Style (See Line Drawings)

Series (50 or 51)

MILITARY STYLE ROTARY SWITCHES

The Series 50 and 51 Rotary Switches are also available with military type switch materials. Many types of the Series 50 are fully qualified to MIL-S-3786/20. Many types of the Series 51 are fully qualified to MIL-S-3786/35. These documents as well as the QPL (Qualified Products List) should be consulted for complete specification and ordering information. Contact GRAYHILL for additional assistance in specifying military styles Series 50 and 51 Rotary Switches.

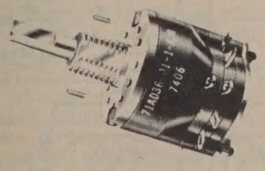
ADJUSTABLE STOPS

AVAILABLE FROM LOCAL DISTRIBUTOR STOCK STYLES AD, BD, ADF AND BDF



Number of positions per pole can be changed by removing and relocating stop pins in holes in the switch front plate. Available in the single shaft versions with either .125" or .250" diameter; 30° or 36° angle of throw; and solder lug terminals or PC mount.

SHAFT AND PANEL SEAL

STYLES AS, BS, ASF AND BSF

Shaft is sealed by "O" ring inside bushing. Panel is sealed by "O" ring at base of bushing. Seals do not alter dimensions as shown in the drawings when switch is mounted. Panel seal is silicone rubber. Shaft seal is an "O" ring per MIL-P-5516B.

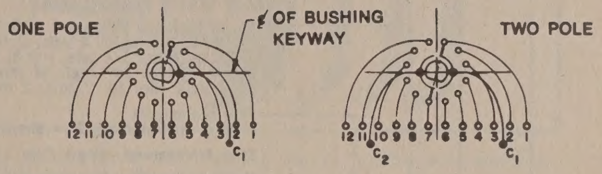
CONCENTRIC SHAFT SWITCHES

STYLE C

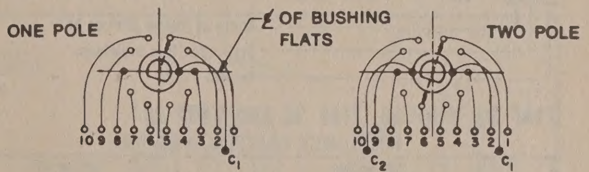
Concentric shaft version of Series 71. Available with solder lug or PC mount termination with 30° or 36° angles of throw. Poles per deck limitations are the same as the single shaft versions. Limited to three decks per each section and to a maximum of six poles per section. Contact GRAYHILL for complete ordering and pricing information.

PC MOUNT

30° ANGLE OF THROW



36° ANGLE OF THROW



RECOMMENDED PC BOARD HOLE PATTERN: Contact GRAYHILL for complete PC Board layout of a two deck switch, 30° or 36° angle of throw, one and two pole per deck.

RATED:
To make and break 400 MA for 10,000 cycles of operation or 200 MA for 25,000 cycles of operation.

VOLTAGE:
115 VAC or 30 VDC, resistive load.

RATED:
To make and break 300 MA for 10,000 cycles of operation or 100 MA for 25,000 cycles of operation.

VOLTAGE:
30 VDC, Inductive load (250 millihenries).

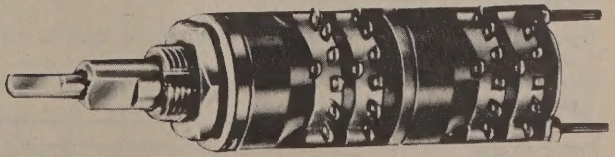
One cycle is 360° rotation and a return through all switch positions to the starting position. This data was metered at sea level, 25°C and 68% relative humidity with the following life limiting criteria.

CONTACT RESISTANCE:
50 milliohms maximum (10 milliohms initially).

INSULATION RESISTANCE:
10,000 megohms minimum between mutually insulated parts (50,000 megohms initially).

VOLTAGE BREAKDOWN:
500 VAC minimum between mutually insulated parts.

LIFE EXPECTANCY:
Contact GRAYHILL for information if the life limiting criteria are more critical than those listed, if the required cycles of operation are greater than those listed, if a larger make and break current is required than the one listed for the desired number of cycles, or if elevated temperatures or reduced pressures are part of the operating environment.



HOW TO ORDER AND PRICES:
See next page.

NOTE: Number of Positions does not affect price.

For adjustable stop prices of 71AD 30, 71BD 30, 71AD 36 and 71BD 36 add 50¢ to the price above of a similar style switch without the adjustable stop feature.

For sealed prices of 71AS 30, 71BS 30, 71AS 36 and 71BS 36 add $1.00 to the price above of a similar style switch without the seal feature. For adjustable stop prices of 71ADF 30, 71BDF 30, 71ADF 36 and 71BDF 36 add 50¢ to the price above of a similar style printed circuit terminal switch (terminals all out one side) without the adjustable stop feature.

For sealed prices of 71ASF 30, 71BSF 30, 71ASF 36 and 71BSF 36 add $1.00 to the price above of a similar style printed circuit terminal switch (terminals all out one side) without the seal feature.

RATING:

Series 19 switches are UL listed at:

15 amps, 120 VAC, non-inductive load. 1 amp, 120 VDC, non-inductive load.

This rating is based on the following criteria:

Overload — 50 operations at 125% rated AC load and 150% rated DC load.

Endurance — 6000 operations at rated load with 900 VAC dielectric strength before and after test.

Temperature Rise — Not to exceed 30°C when carrying rated AC load after endurance test.

Contacts will carry 20 amps at 115 volts AC with 30°C maximum temperature rise.

CONTACT RESISTANCE: (Measured at 2 VDC and approximately 100 MA) for new switch approximately 10 milliohms.

INSULATION RESISTANCE: Approximately 100,000 megohms. Between mutually insulated parts.

VOLTAGE BREAKDOWN: Approximately 2500 VAC. Between mutually insulated parts.

HOW TO ORDER:

Part Number 19101-* UL.

*(Indicate number of positions — 2, 3, 4, etc.)

Dimension	C	D	E	F
SERIES 42	.562	1.000	.830	.093
SERIES 44	.642	1.162	1.000	.121

RATING:

Rated: To make and break the following loads with 30° or 36° angle of throw: 1 amp., 115VAC resistive; 1 amp., 6 to 28 VDC resistive; 0.25 amp., 115 VAC inductive; 0.02 amp., 115 VDC inductive; 0.10 amp., 6 to 28 VDC inductive; 0.10 amp., 115 VDC resistive. To carry 10 amps continuously.

Contact Resistance: .010 ohms initial. After 25,000 cycles of operation .020 ohms maximum.

Insulation Resistance: 50,000 megohms minimum (initially).

Voltage Breakdown: 1,000 VAC initially (500 VAC or better after most environmental tests).

Life Expectancy: 100,000 mechanical cycles of operation.

Stop Strength: 15 pound-inches minimum.

Rotational Torque: 20-96 ounce-inches, depending on the number of poles per deck and the number of decks.

Contacts: Shorting or non-shorting wiping contacts with over 150 grams contact force.

Shaft Flat Orientation: Flat opposite contacting position of pole number one. (See circuit diagram.)

ORDERING INFORMATION

How to determine part number — Sample part number for a standard style, fixed stop, 2 deck, 1 pole per deck 12 positions per pole, 30° angle of throw rotary switch with non-shorting contacts.

General Description
Number of Decks (1 thru 3)
Number of Poles per Deck (1 or 2)
Number of Positions per Pole
(AJ = Adjustable Stops)
Type of Contacts —
N = Non-Shorting, S = Shorting

44 A 30 - 02 - 1 · 12 N - F

Add -F for Stop between First and Last Position of a 1 Pole/Deck Switch with Max. Positions. No Notation required for Continuous Rotation.
Angle of Throw (See Series)
Style —
A = Standard, Solder Lug Terminals
D = Style A with Adjustable Stops
Series 42 (36°) or Series 44 (30°)

For other angles of throw; 3 to 6 poles per deck; 4 thru 12 decks; military, sealed, UL listed, or PC mountable styles, contact factory.

PRICES:

ONE POLE PER DECK

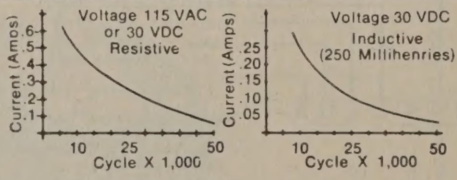
RATINGS:

Life Expectancy:



Switch rating for break before make contacts.

Curve data based on test data conducted at sea level, 25°C, and 68% relative humidity.

Cycle equals 360° rotation and return.

Cycling rate is 10 cycles per minute.

Life limiting or failure criteria for these curves are:

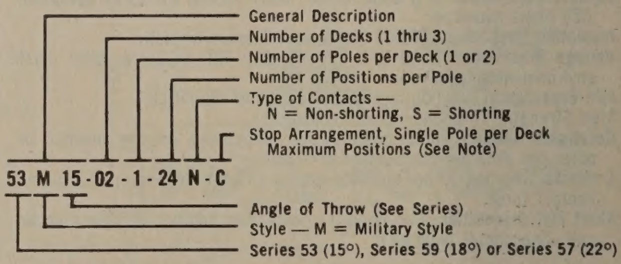
Contact Resistance: 50 milliohms maximum (15 milliohms initially).

Insulation Resistance: 10,000 megohms minimum between mutually insulated parts. (50,000 megohms initially.)

Voltage Breakdown: 500 VAC minimum between mutually insulated parts. These switches will carry 4 amperes with a maximum contact temperature rise of 20°C.

ORDERING INFORMATION AND PRICES:

How to determine part number: Suffix "C" or "F" is required for a complete part number when ordering single pole/deck switches with maximum number of positions. Samle part number for a 2 deck, 1 pole/deck, 24 position, Style M, 15° angle of throw, non-shorting contact switch without stops:



53 M 15-02-1-24 N-C

General Description
Number of Decks (1 thru 3)
Number of Poles per Deck (1 or 2)
Number of Positions per Pole
Type of Contacts — N = Non-shorting, S = Shorting
Stop Arrangement, Single Pole per Deck Maximum Positions (See Note)

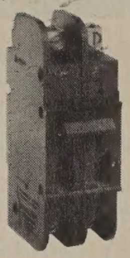
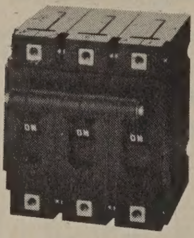
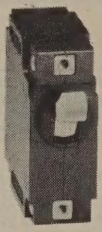
HYDRAULIC-MAGNETIC CIRCUIT PROTECTORS



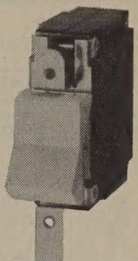
E-FRAME



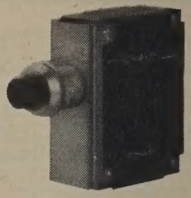
SERIES AM1



SERIES JA



SERIES JC



SERIES JD

With the widest range of styles and electrical ratings in the industry, Heinemann circuit breakers offer almost unlimited options: integral or fractional must-hold ratings from 0.010 to 100A, and in steps to 225A; single- and multipole models; breakers for 50/60Hz, 400Hz, or dc service; breakers qualified under Mil Specs; and breakers in any series which include special internal circuits such as high-inrush capability, relay-trip, auxiliary switches, dual rating, DuCon® construction for both current and voltage sensing, and other optional circuits for sophisticated control functions.

Hydraulic-magnetic actuation (a Heinemann invention) assures that must-hold and must-trip points are unaffected by ambient temperature fluctuations. Very precise control within a narrow current band is thus possible. In addition, a wide selection of time-delay characteristics permits close match of breaker to equipment requirements, allowing high temporary overloads to prevent nuisance tripping or tripping instantaneously according to the particular design need.

Consult the Heinemann Protector Selector (Bulletin 304) or contact your nearby Heinemann representative for complete technical assistance. Individual product-line bulletins listed below.

E-FRAME: Smaller than other E-Frame breakers, competitively priced. Approx. 5¾h x 2w x 2⅝d (2-pole). Available in 1 to 6 poles.

SERIES AM1: 1 to 4 poles. UL-component-recognized. Special circuits available. Approx. 2.5h x 2.5d, .75w per pole.

SERIES JA: Compact OEM breaker. Only 2.5 oz/pole. 1 to 4 poles. Approx. 2h x 1.875d, .75w per pole.

JA VARIANTS. Snap-In JB (1 to 4 poles) installs in rectangular panel cutout without screws. JC (1 to 4 poles—single-pole shown) has white or gray rocker handle. JD has round button for push-push operation. JE has moisture-sealed bat-type toggle for marine applications.

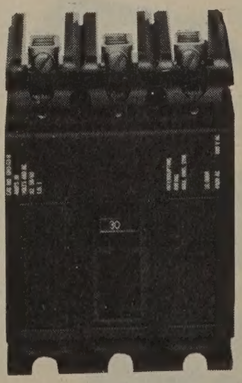
LOW-COST RESETTABLE PUSHBUTTON PROTECTOR, DIRECT REPLACEMENT FOR FUSE AND CYLINDRICAL FUSEHOLDER

The brand-new Heinemann Re-Cirk-It® circuit protector is resettable with just a light finger touch on the pushbutton, and fits a ⅝" circular panel hole to directly replace a glass fuse and fuseholder. Presently available in a choice of current ratings from 3 through 20A at 120V ac or 32V dc, and 3 through 10A at 240V ac. Time delay prevents nuisance tripping.

Protector trips only on overcurrent conditions, cannot be turned off manually. Also cannot be held on against a fault. ¼" quick-on terminals are standard. UL-recognized as component—appliance control.

Priced as low as a fuse and fuseholder in OEM quantities. Ready for immediate delivery. Alternate button styles available on special order. Bulletin 4000.



ANNOUNCING THE HEINEMANN SERIES GH3—a new low-cost fully-magnetic EH-Frame breaker

Now you can afford a completely magnetic three-pole three-phase branch-circuit protector at a price lower than you are accustomed to pay for an ordinary thermal unit.

The new Heinemann GH3 is UL-listed for short-circuit interrupting capacity of 10,000 amp at 480V 60Hz three-phase at 45% to 50%power factor. Wide range of standard off-the-shelf continuous current ratings from 15 to 100 amp. Already proven in such heavy-duty applications as computer main frames, air conditioning, machine tools.

6" high, 4.125" wide, 3.375" deep—fits standard EH-Frame panel cutout. Wgt. 3.3 lb. Ask for Bulletin 3442.

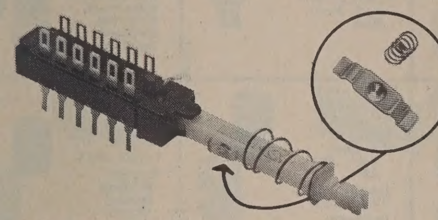
SCHADOW™

MODULAR PUSH BUTTON SWITCHES

"Creative Switchmakers" for Home Entertainment Products and Test Equipment

If it's a better switch you need . . . better switch to Schadow!

better switch...here's why...

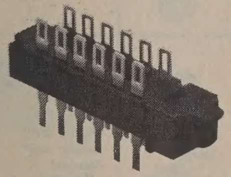


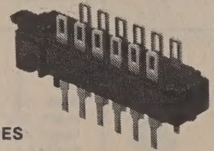
INDIVIDUAL COIL SPRING LOADED MOVING CONTACTS

- The coil spring-loaded contoured moving contacts have been designed to provide balanced contact pressure for optimum surface to surface interface with the fixed contacts . . . assuring reliable performance in low voltage (dry circuit) applications
- Long term low contact resistance
- Constant coil spring tension at the contact points provides positive self-cleaning action

HAND WIRING AND FLO-SOLDERING CONNECTIONS ARE STANDARD

- Solder lugs on top for hand wiring
- PC spikes at bottom for flo-soldering





MODULE ADVANTAGES

- Enclosed housing protects inner contact area from dust and foreign intrusions
- Fixed terminals are "staked" in position, providing an extra seal to help prevent wicking of solder or flux
- Molded PC Board Standoffs, front and back, on bottom side, assure parallel mounting

SUPERIOR MODULAR CONSTRUCTION

- Ease of maintenance . . . switch plunger with sliding contacts is removable from the front without disturbing electrical connections

TECHNICAL DATA

Contact Resistance ....4-6 mOhms
after 25,000 cycles ....6-20 mOhms
Lifetime Expectation Interlocked (50,000)
Momentary, Push Push (100,000) cycles
Material of Construction
Fixed contact. Brass/Silver Plated ....0002"
Moving contact ....Bimetal Brass/Silver .0004"
Plunger Material....Polycarbonate V-0 rated or Delrin
Contacts ....Non-shorting
Housing Material.........Polycarbonate V-0 rated or Glass Reinforced Nylon

Terminal Board Material ....High Grade Paper Phenolic or V-0 rated material......Series F
Key pressure with 2PDT ....28 oz.
Key pressure with 4PDT ....32 oz.
Key pressure with 6PDT ....35 oz.
Key pressure with 8PDT ....42 oz.
Key pressure with 10PDT ....46 oz.
Key pressure with Power Switch ....42 oz.

NOTE: Lighter key pressures available, contact factory for details.

NOTE: For switching applications requiring flame retardant materials, contact factory.

CHASSIS DIMENSIONS FOR SERIES F & SERIES G SWITCHES

NOTE: Maximum stations to be grouped in one interlocking action. 10mm-10 / 12.5mm-23 / 15mm-23 / 17.5mm-23 / 20mm-19

MECHANICAL REFLECTING INDICATOR BUTTONS FOR F & G SERIES

- Uses no energy. Needs no lamp, lamp/holder, power supply, switch contact or wiring.
- Works on the principle of reflecting ambient light through a clear plastic lens.
- Generates no heat and eliminates costly lamp replacement.

FA 110 DUAL LEGEND INDICATOR BUTTON

CA-110 SERIES

Schadow, the creative switchmaker, has developed a "lampless" push button switch, with bright color indicators — with or without graphics — to mechanically indicate changing functions.

This innovative push-button switch, Series CA 110, is for use in high quality commercial applications. The sophistication of the series in terms of electrical construction (bifurcated contacts — coil spring loaded) and mechanical actions available, will satisfy the most demanding switching requirements.

Tableau or stacked switches are available in Series CA 110, 15 switches wide x 10 high per chassis.

Because a lamp and socket assembly is omitted, economies in manufacture permit a lower pricing schedule, and the elimination of another drain on electrical power sources.

If it's a better switch you need . . . better switch to Schadow.

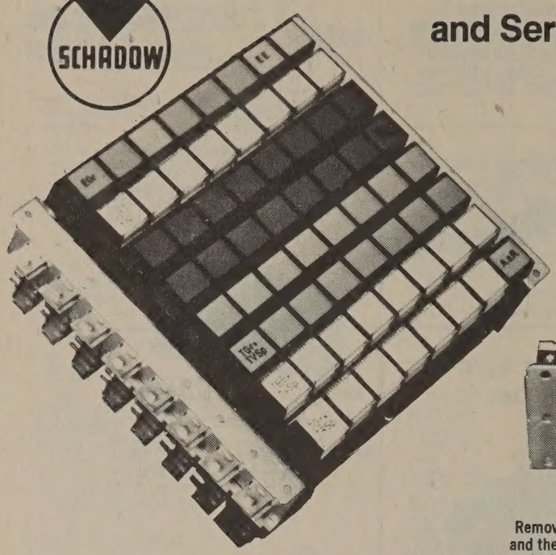
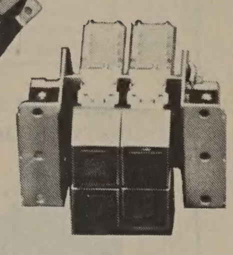
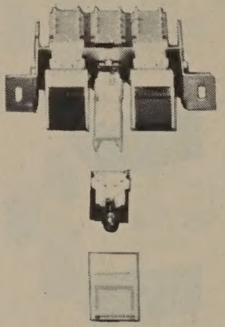
High quality Series CL illuminated and Series C non-illuminated push button switches



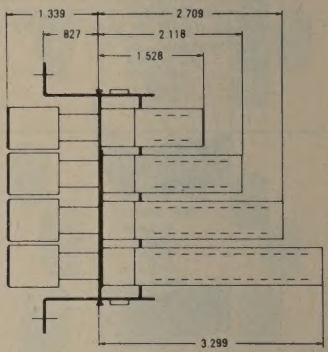
This push-button switch is for use in high quality commercial applications. The sophistication of the Series "CL" & "C" in terms of electrical construction (bifurcated contacts — coil spring loaded) and mechanical actions available will satisfy the most demanding switching requirements.

Tableau or stacked switches available either "CL" or "C" Series, 15 switches wide x 10 high per chassis. With the designation Series "CL" this switch is available with slip-on lamp holder. Use Type 5522 lamp. Button spacing is 17.5mm (.689").





Remove plunger, including button and the sliding bifurcated contacts, by loosening the locking bar.



SPECIFICATIONS: SERIES CL and C PUSH BUTTON SWITCHES

MECHANICAL DATA

Key travel = .315" Contact travel = .197"
Life 300,000 cycles depending upon load.
Key pressure — 2 & 4PDT = 35 oz.; 6 & 8PDT = 49 oz.

MECHANICAL ACTIONS AVAILABLE

Gr = Interlocking.
Gr₁, Gr₂ = Two independent interlocking groups.
o.A. = Momentary.
A.o.R. = Momentary release button for interlocking.
EE = Push-push.
Z = Central release for individual latching.
Sp = Blocking action only one key down. Switching is delayed to increase margin of safety.
Gr + Sp = Interlocking with blocking. Maximum 15 button (stations) in one row.
Gr₁, + Sp Gr₂, + Sp = Two groups of interlocking with blocking. (Group 1 can be blocked independent of Group 2.)
o.A. + VSp = Momentary action with blocking.
EE + VSp = Push to engage, push again to release — with blocking. The depressed button must first be released before another button can be depressed.
Gr + VSp + A.o.R. = Interlocking with blocking and locking of button with one central momentary release button. The depressed button must first be released by central release button or solenoid remote release, before another one button can be depressed.
Gr + RSp + A.o.R. = Locked — Interlocking with blocking. A central release button must first be depressed before any of one interlocked buttons can be depressed; this button remains latched after release button is allowed to return. The main circuit can be interrupted, if necessary, through the release button contacts. In this way, a 4 amp. circuit can be switched, without current, through standard C-Module switch contacts.

CHASSIS AND STATION DATA

Model Number 17.5
Center to center spacing .... 0.689"
Number of stations 1-15
Standard Buttons-Series "C" (Non-illuminated) CSX
Standard Buttons-Series "CL" (Illuminated) . CRS, CRR

CONTACT TYPES

Standard: Non-shorting — Solder Terminals Top, PC Terminals Bottom.
Shorting: ks Short PC top, Standard PC bottom: SI
Short PC terminals both sides: SC
Special cut off terminals either side .036" long.

INSULATION MATERIAL

Contact Plate: Phenolic 20.62.8 Kl.IV
Module: Polycarbonate (Makrolon)
Contact Plunger 2u, 4u: Polycarbonate (Makrolon)
Contact Plunger 6u, 8u: Polyamid
Outer Plunger: Azetalharz

ELECTRICAL DATA

Voltage Max.: 1000 volts.
Current Max.: 2 amps cos$_\phi$ = 1.
Load Max.: 100 watts ac.
Load Max.: 25 watts dc.
Test Voltages: Contact to ground 300 volts ac.
Terminal to terminal: 2000 volts ac.
Auxiliary terminals to outer-terminals: 100 volts ac.
Lamp holder contacts to ground: 1500 volts ac.
Insulation Resistance: 10^{12} Ω after 96 hours storage in 95-100% humidity.
Contact Resistance: 5 milli Ω.
Contact Resistance: After 25,000 switching cycles — about 15 milli Ω (depends on load).
Dielectric loss, tgδ 4×10^3 (300 kHz).

POWER SWITCH NC17 (UL, CSA and VDE Approved)

Max Voltage — 250 ac.
Max. Current — 6A (Cosϕ = 0.75)
Max. Current — 3A (Inductive load)
Max. Voltage — 250 dc.
Max. Current — 4A dc.
Test voltage between terminals & chassis: 3000V ac.
Test voltage between terminals & contacts: 2000V ac.
Contact Resistance: 50 milli Ω (With rated load).

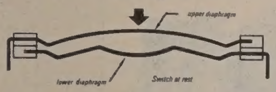
low cost
3 point contact
totally sealed
highest integrity

disc switch

modular electronic components

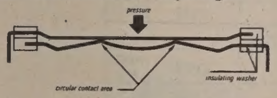
TOTAL SEALING

The Disc switch is totally sealed through insert moulding and ultra-sonic welding.



upper diaphragm
lower diaphragm
Switch at rest

The Disc switch is built around two contact diaphragms separated by an insulating material. The profile of each of these two diaphragms is such that, under the action of applied pressure on the upper dome, it is momentarily collapsed, making instant positive, 3 point contact with the lower diaphragm.



pressure
circular contact area
insulating washer

- High Reliability...10 X 10^6
- Self Cleaning
- Broad Range of Switching Power...from a few milliwatts to 30 watts.
- Low Bounce (less than 100 microseconds)

MD Disc module: Extra-flat momentary contact module. Shorter stroke configuration installable directly on printed circuit board. Enables you to design your own keyboard adapted to your own specific needs.

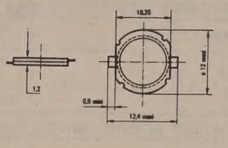
ED Disc element: Basic contact element; actuation of the basic contact element requires a resiliant (i.e., neoprene) cover on plunger with a minimum diameter of 3 MM/.118". Travel of the dome must be positively limited to 0.4 MM/.016". We can deliver this mounted on your printed circuit board to your specific requirements.



DMB Modular Rocker Disc Switch: Momentary contact for use on printed circuit board. Customer design and installation from bread board through production. Can be mounted in line on 15.24 MM/.600" centers or in a matrix (.600" x .800"). Available with one or two L.E.D.'s (red, green or yellow). Engraving or hotstamped graphics available.

Series "R"™

electronic switch input components

Series R is the economical answer for an electronic switch input component to use with standard dual-in-line packages (DIP's), ideally designed for incorporation into a broad variety of electronic devices including advanced microprocessor controlled equipment. Series R is compatible with TTL, CMOS Logic. Redundant contacts insure required reliability.

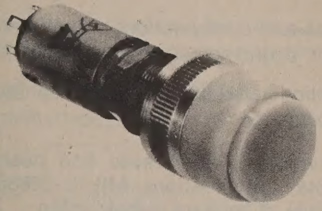
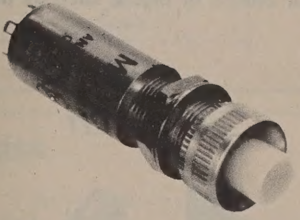
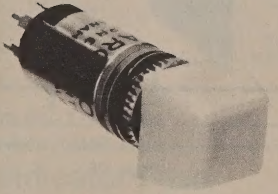
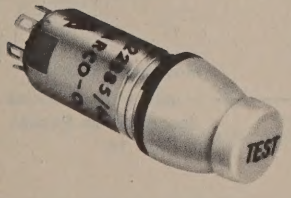
Presslite Switches









Illuminated Products' versatile and expanding line of modular Presslite switch and matching indicator assemblies is the end product of years of continuing design improvement to meet the increasing demands of the control/display markets. The incorporation of modern materials, combined with rigid quality control procedures and continuous testing of production samples, assures high reliability and extremely long life.

A wide range of electrical ratings and contact configurations are available in both alternate (push-on-push-off) and momentary operation. Where the switch is operated within its rating, the following life expectancies apply:

Rating	Type	Expected Life at Rated Load
½ Amp	590, 591	1 to 3 million cycles
½ Amp	830, 860 (dry reed)	2 to 10 million cycles
3 Amps	542, 543, 545, 546, 562, 563, 565, 567, 568, 643	1 to 2 million cycles
5 Amps	316, 318, 320, 321, 416, 418, 516, 518, 520, 521, 616, 618	500,000 to 1 million cycles
10.5 Amps	571, 572, 575, 576, 581, 582, 585, 586, 671, 672, 675, 676, 681, 682, 685, 686, 700 series, 800 series, and all Rainbow™ switches	100,000 cycles @ 10.5 Amps to 1 million cycles @ 5 Amps
15 Amps	317, 319, 517, 519	50,000 to 100,000 cycles

Unless otherwise specified in the following pages, Presslite materials are as follows:

Contacts: Coin silver

Solder Terminals: Coin silver or plated brass

Terminal Insulation: Molded thermoset plastic

Housing: Anodized aluminum, except 10.5 amps Presslite bases on Pages 7, and 8, 16 and 19 which have thermoplastic and nickel plated brass mounting bushing housing.

Marcoflex switches on Pages 25 and 26 have one piece thermoplastic housing and terminal insulation.

Where the Presslite or Matching Indicator is to be used with a neon lamp, the A1H high brightness type is recommended. Best illumination is achieved with lunar or other light color pushbuttons. Green or blue should be avoided. A 27K ohm dropping resistor is recommended for the A1H neon lamp. On most types, this resistor can be provided as an integral part of the switch or indicator base.

Presslites, Friction Cap

Ordering Information

The Friction Cap Presslite series provides the broadest possible flexibility in terms of electrical characteristics, appearance and mounting procedure, allowing the user to "engineer" a switch assembly to meet his specific requirements.

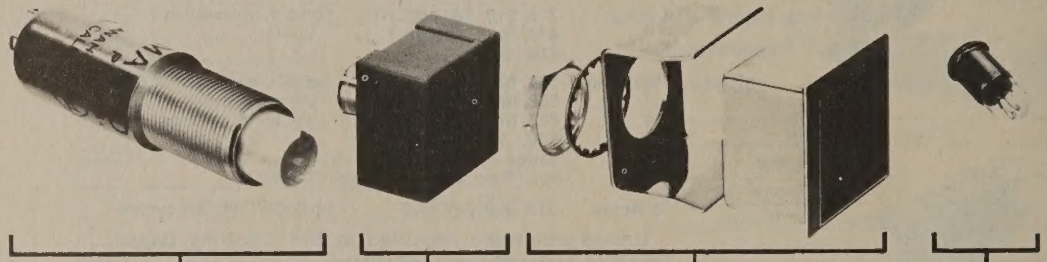
Many pushbutton sizes and configurations are offered, with sufficient space for engraved legends or symbols.

A wide range of mounting hardware is available to meet virtually every panel appearance or mounting requirement.

Many Presslite illuminated switch bases and pushbuttons meet applicable specifications MIL-S-22885. Consult factory for details of military construction.

A complete part number for a Friction Cap Presslite assembly consists of four blocks of digits, such as the following:

516 — 40112 — 51 — 327



Switch or Indicator Base Type — select from those described on Pages 4 thru 8.

Pushbutton — select assembly as described on Pages 9 and 10.

Mounting Hardware — select assembly as described on Pages 11 thru 14.

Lamps — T-1 ¾ midget flange base. Select from Group A, Page 28.

SCHEMATIC

Double pole, 2 circuit, double break (Form Z) snap action contacts.
Contact rating: 10.5 amps resistive, 125/250 VAC
10.5 amps resistive, 28 VDC
1/4 H.P., 125/250 VAC

ALTERNATE LATCHING ACTION TYPE 572

- Nominal operating force: 20 oz.
- Nominal pushbutton travel: 7/32 in.
- Latching action: Pushing plunger closes N.O. contacts and latches plunger. Pushing plunger again releases contacts and returns plunger to "out" position. Plunger latch point is 5/32 from "out" position. Switch and latch interlocked to prevent teasing.

MOMENTARY ACTION TYPE 582

- Nominal operating force: 16 oz.
- Nominal pushbutton travel: 3/32 in.

SCHEMATICS

Single pole, double throw (Form C) snap action contacts.
Contact rating: 15 amps resistive at 115 VAC or 28 VDC.

ALTERNATE ACTION TYPE 517

- Nominal operating force: 32 oz.
- Nominal pushbutton travel: 7/32 in.

TYPE 317

INTERNAL RESISTOR

- An internal 27K OHM resistor connected to terminal No. 5 provides for A1H neon lamp operation.

MOMENTARY ACTION TYPE 519

- Nominal operating force: 40 oz.
- Nominal pushbutton travel: 5/32 in.

TYPE 319

INTERNAL RESISTOR

- An internal 27K OHM resistor connected to terminal No. 5 provides for A1H neon lamp operation.

Presslites, Friction Cap

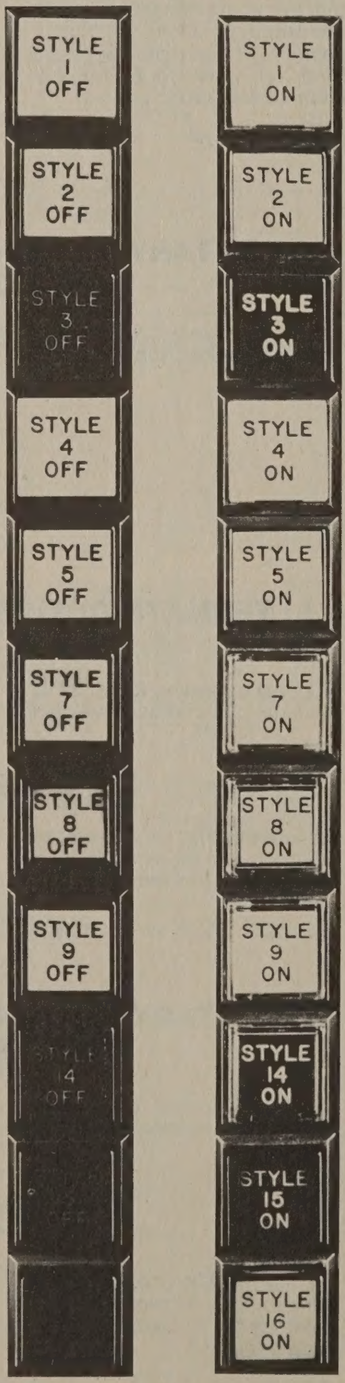
Pushbuttons

A wide variety of pushbuttons are available for the Friction Cap Presslite switch line. Round, square and rectangular sizes are offered, in nine different colors, with or without legends or symbols.

Pushbutton part numbers are shown in the table on page 13. These part numbers are used to construct a complete assembly part number as shown on page 6.

STYLES

Eleven different pushbutton styles are offered for Friction Cap and Snap-in Presslites. An understanding of these styles will permit selecting pushbuttons to provide the best possible panel appearance and operating convenience. All eleven styles are shown in color on the back cover of this catalog.



Style 1 . . . . . is the most frequently used. It features "wrap-around" construction, providing front and side surfaces of one continuous piece of translucent plastic in the color specified. It also provides the largest possible legend area in each size.

Style 2 . . . . . provides a flat lens of the specified color with black opaque sides. It is used where a $\frac{1}{32}$ inch wide black frame around the illuminated area is desired, or where no transmission of light through the sides is allowed, such as in matrix groups.

Style 3 . . . . . is a Style 1 pushbutton oversprayed black on all surfaces. It is used only with engraved legends, where the message illuminates in the specified color while the background remains black. This style provides maximum legibility in the "on" condition. Where severe usage is anticipated, a protective cover (Style 14 or 15) is recommended to prevent damage to the black surface.

Style 4 . . . . . has a lunar Style 1 wrap-around lens with an internal filter of the specified color. The color is visible only when the lamp is "on". In a low ambient light environment, Style 4 is virtually identical to Style 1 in appearance. The greater the ambient light, the less saturated the appearance of the color when the lamp is on.

Style 5 . . . . . is similar in performance to Style 4, but features black opaque sides with the $\frac{1}{32}$ inch wide frame around the illuminated area, as described under Style 2.

Style 7 . . . . . is a Style 1 cap of the specified color, with a clear protective cover over the front and sides. It is used in applications where the legend must be protected from wear or dirt. It also permits use with customer-provided film or vellum legends. The protective cover provides a $\frac{1}{16}$ inch wide frame around the translucent legend area.

Style 8 . . . . . is a Style 2 pushbutton of the specified color with a clear protective cover, but is otherwise similar to Style 7. The legend area is framed by a $\frac{3}{32}$ inch wide border.

Style 9 . . . . . is a Style 4 pushbutton with a clear protective cover. The legend area is framed by a $\frac{1}{16}$ inch wide border.

Style 14 . . . . is a Style 3 pushbutton with a clear protective cover.

Style 15 . . . . is a Style 3 pushbutton with a grey, neutral density protective cover of about 25% light transmission, for use in hidden legend applications. The legend is nearly invisible when the lamp is "off". This style is particularly effective under high ambient light conditions.

Style 16 . . . . is a Style 4 pushbutton with the neutral density cover described in Style 15. In the "off" condition, the background is dark grey, and the legend is barely visible under normal ambient light levels. When "on", the background illuminates in the selected color, and is framed by a $\frac{1}{16}$ inch wide black border.

Presslites, Friction Cap

Pushbuttons

COLORS

The standard Presslite pushbutton colors were selected to provide the best compromise between pleasing appearance in the "off" condition and high light transmission in the "on" condition when used with Style 1 and similar pushbuttons. Several colors are offered in more than one transmission grade, or otherwise require discussion:

White
(Color No. 5) is snow white in the off condition. When used with black oversprayed pushbuttons (styles 3, 14, and 15), a pale blue internal color filter is also provided to eliminate possible confusion with yellow when the lamp is on.

Lunar
(Color No. 17) provides transmission characteristics midway between clear and white (color No. 5). It is recommended where high ambient light level might otherwise make it difficult to determine when the lamp behind a white lens is "on", or in applications involving low brightness lamps such as neons. Because of its high transmission, the outline of the filament is slightly noticeable. Lunar is also used in Styles 4, 5, 9, and 16 Presslite pushbuttons to provide maximum color transmission from the internal color filter. When supplied as color No. 5 (White, when lamp is on), a pale blue internal color filter is also provided in Styles 4, 5, 9, and 16, to eliminate possible confusion with yellow when the lamp is on.

Red
(Colors No. 6 and 36) is provided in two transmission grades to meet both general purpose and warning applications. Color No. 6 is a pure "lipstick red" color in the "off" condition, providing excellent diffusion when "on". Color No. 36 is recommended for warning applications and for use with neon lamps. This color is much darker in the "off" condition than Color No. 6, and provides greater light transmission. In high ambient light areas, Color No. 36 provides a greater on-off contrast ratio than does No. 6.

Green
(Colors No. 7 and 37) is also provided in two transmission grades. Color No. 7 is a rather dark, "grass green" in the "off" condition and is a very saturated, pure green when "on". No. 37 is a greyish-green in the "off" condition and transmits more light when "on" than does No. 7. Both grades completely hide the lamp filament. Green is not satisfactory for use with neon lamps.

Blue
(Color No. 11) is selected in a transmission grade that allows the lamp filament to be slightly noticeable. This is necessary to provide sufficient brightness for general use, since incandescent lamps have very little blue in their output. Like green, blue cannot be used with neon lamps.

Other Standard Colors offered are yellow (No. 12) and orange (No. 16).

Frequently, styling considerations for a commercial product dictate the use of non-standard colors to achieve a particular effect. Illuminated Products' engineers will be glad to assist you in developing special colors for such applications.

LEGENDS

In addition to identifying the function of Presslite pushbuttons and indicator lens caps by the suitable selection of colors, their versatility and convenience may be greatly extended by an engraved or hot-stamped legend.

Hot stamping is not as durable as engraving. While it is entirely satisfactory for indicator lens caps and infrequently used pushbuttons, it is not recommended in applications where the pushbutton may be operated many times a day. In this case engraving is essential.

The most common type used for hot-stamped and engraved legends is ⅛ inch high News Gothic, which permits an average of about 8 letters per horizontal inch. For best appearance, at least 1/16 inch of space should be allowed at both the beginning and end of each line. The same amount of space should be allowed between lines. For example, a ¾ inch square pushbutton will accept 3 lines of type, each line having up to 5 letters, while a ½ inch square pushbutton can accommodate only 2 lines of 3 letters each. Where more letters per line are required, Condensed News Gothic may be used or the letter size reduced.

Most Illuminated Products' distributors provide custom engraving of Presslites and indicators, and the factory maintains a well equipped engraving and hot stamping department. When ordering custom engraving, full details should be provided on a drawing or sketch. Unless otherwise specified by the customer, black letters will be used on white, orange, and yellow backgrounds, and white will be used on red, green, and blue backgrounds.

PUSHBUTTON PART NUMBERS FOR FRICTION CAP PRESSLITES
(Where a number is not shown, the pushbutton is not available in that style)

PUSHBUTTON SHAPE	PUSHBUTTON SIZE	PUSHBUTTON STYLE (See Page 9)										
		1	2	3	4	5	7	8	9	14	15	16

	⅝ IN.	3016	3026	3036	3046	3056	—	—	—	—	—	—
	¾ IN.	4016	4026	4036	4046	4056	4076	4086	4096	40146	40156	40166
	¾ IN. KEYBOARD	15016	—	—	15046	—	—	—	—	—	—	—
RECTANGULAR	½ x ¾ IN.	8016	—	8036	8046	—	—	—	—	—	—	—
	½ x ⅞ IN.	7016	7026	7036	7046	7056	—	—	—	—	—	—
	¾ x 1 IN.	12016	12026†	12036	12046	12056†	—	12086	12096†	—	—	—

Pushbutton Colors: Last digit, 6, of above part number designates translucent red color.

For other colors, substitute one of the following:

White*: 5 Dark Red*: 36 Orange: 16 Blue: 11
Yellow: 12 Light Green*: 37 Green: 7 Lunar*: 17

*Colors 5, 17, 36, and 37 not available in Styles 4, 5, 9, and 16 (internal color filters).

Above part numbers are for unkeyed (rotatable) caps.
For keyed (non-rotatable) caps, substitute "1" for the first "0" of the part number. Example: 1016 is unkeyed. 1116 is keyed.

Square or rectangular mounting hardware provides inherent cap keying. Therefore, assemblies which use square or rectangular recess adaptors or recess barrier mounts are provided with unkeyed caps.

Pushbutton Materials: All of the above pushbuttons are high impact-resistant plastic per L-P-349a (Tenite) except those marked "†" are per L-P-393 (polycarbonate).

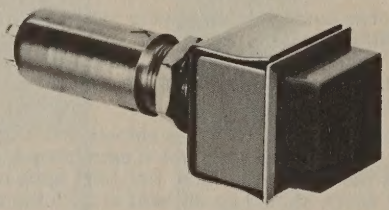
Presslites, Friction Cap

Friction Cap Presslite Mounting Hardware



The versatility of Illuminated Products' Presslites is extended by the broad selection of mounting hardware styles and finishes. These include knurled nut and safety collar for surface or sub panel mounting, and 6 different recess mounting configurations including the low cost snap-in type.

The third block of digits in the complete Presslite part number identifies mounting hardware, as follows:

516 — 40112 — 51 — 327

Finish
1 Bright
2 Black

Style
1 Knurled Nut
4 Safety Collar
5 Recess Adaptor
6 Recess Barrier Mount
7 Flush Snap-In Mount
8 Barrier Snap-In Mount
50X Recess Adaptors on Mounting Strip
60X Recess Barrier Mounts on Mounting Strip

The above part number describes an assembly which includes a bright recess adaptor.

The projection of the Presslite base behind the front of the mounting panel depends on the base type, and the style of mounting hardware, as shown below. To determine projection behind the back of the panel, the panel thickness must be subtracted from this dimension.

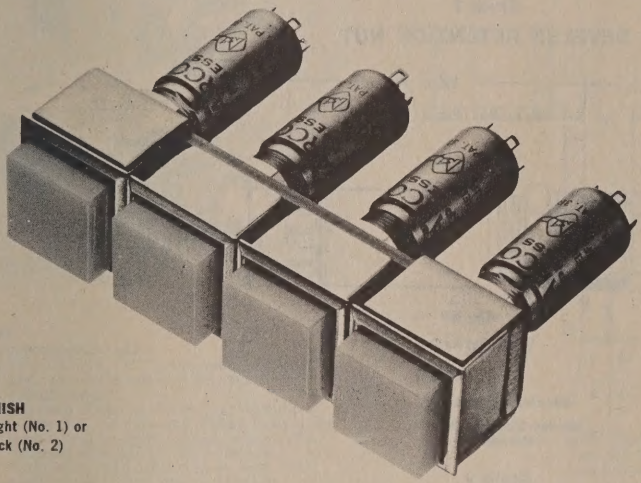
STYLE 50X recess adaptors on mounting strip



FINISH
Bright (No. 1) or
Black (No. 2)

Available
Pushbutton Sizes
☐ ¾ In. Square

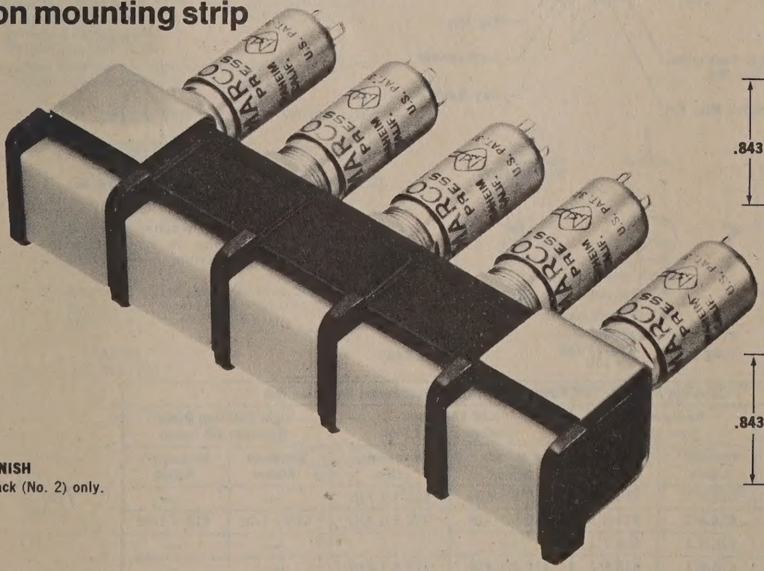
Where 3 or more Recess Adaptors (Style 5) or Recess Barrier Mounts (Style 6) are to be mounted next to each other, it is recommended complete assemblies be ordered mounted on an aluminum strip to facilitate final assembly into the panel. Installation requires tightening of only 2 hex nuts.

When ordering 50X or 60X assemblies, X is the number of stations. Thus, part no. 516-4015-5081 describes an 8 station recess adaptor assembly with bright finish.

Where more than one type of base or pushbutton color is to be installed on the mounting strip, or special legends are required, provide complete information and a special part number will be assigned to identify the assembly.

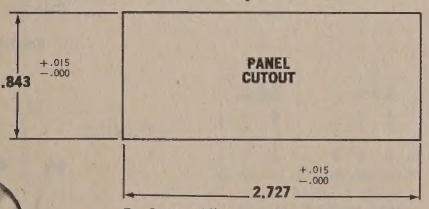
The mounting strips do not alter space requirements of Style 5 or 6. The panel cutouts for 3 or more stations are as follows:

STYLE 60X recess barrier mounts on mounting strip



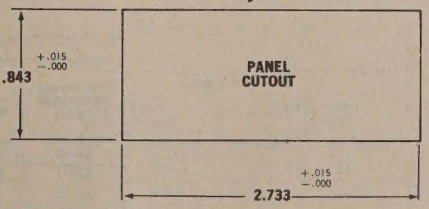
FINISH
Black (No. 2) only.

Style 50X



For 3 assemblies on strip.
For each additional assembly add .942.

Style 60X



For 3 assemblies on strip.
For each additional assembly add .906.

Notes:

1. **Switch Characteristics:**
   - Contact rating; 10.5 amps resistive, 125/250 VAC. 10.5 amps resistive, 28 VDC, ¼ H.P. 125/250 VAC.
   - Alternate action switches: pushing button closes N.O. contacts and latches pushbutton. Pushing button again releases contacts and returns pushbutton to "out" position. Pushbutton latch point is ⁵⁄₃₂ in. from "out" position. Switch and latch interlocked to prevent teasing.
   - Nominal pushbutton travel:
     Alternate action switches: ⁷⁄₃₂ in.
     Momentary action switches: ⁵⁄₃₂ in.
   - Nominal operating force:
     Single pole switches: 12 oz.
     Double pole switches: 20 oz.
2. **Materials and Finishes:**
   - Pushbuttons; high impact resistant plastic per L-P-349a.
   - Knurled nut; aluminum, bright anodized.
   - Keywasher and mtg. nut; brass, nickel plated.
   - Lockwasher; stainless steel.
   - Housing; molded thermoplastic.
   - Contacts: coin silver.
3. **Lamp:** T-1¾ incandescent with midget flange base or AIH neon. See lamp selection guide. Lamp may be replaced from front of panel by removing pushbutton.
4. **Weight:** Approx. .6 oz.
5. **Solder Terminals:** Terminals accept AMP FASTON No. 60729-1 receptacles or equiv.

Fiberglass insulation provides ⁵⁄₃₂ in. min. leakage path between all terminals.

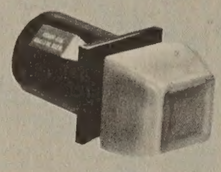
OAK

Presslites, Snap-in

½ amp momentary action switch and matching indicator



Suitable for use with Light Emitting Diode (L.E.D.)

The double break bifurcated wiping action contacts of the Snap-In Presslite Series provide extremely reliable switching for data entry and control applications. In addition to low initial cost, a further major saving results from the very simple mounting procedure of pressing the switch into a round panel hole. The round mounting hole provides a further advantage for matrix mount applications. Instead of the complicated egg crate assemblies which were used in the past, a simple plate with 11/16 inch diameter holes punched on ¾ inch centers is all that is needed to mount any size matrix.

All of the pushbutton styles described on Page 12 are available for the Snap-In Presslite. In addition, pushbuttons are available which enhance legibility for use with light emitting diodes and neon lamps. These pushbuttons may be used interchangeably with both the Types 590 and 591 Presslite, and the Types 592 and 593 matching indicator.

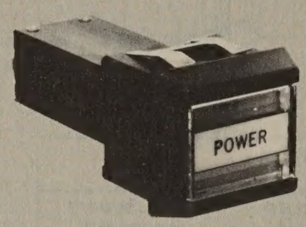
OAK

Presslites, Rainbow

10.5 amp snap action



Contact Module U.L. Listed

The Rainbow Switch is totally unique in its ability to change pushbutton color when it is depressed from the "off" to the "on" condition. A varied selection of colors is available to the designer.

A white legend area is provided between the color bands, which may be illuminated by a lamp contained inside the pushbutton. This lamp also provides illumination of the color bands for operation in a dark environment, but this additional illumination is unnecessary for viewing under normal ambient light levels.

Alternate action switches provide a latching action, so the pushbutton remains down while the switch is "on", and returns to the out position when the switch is turned "off" by again depressing the pushbutton. This latching action retains the color and legend changes between operations. Momentary action Rainbow Switches are also offered as companion items. Their color and legends remain changed only while the pushbutton is depressed, after which they return to the out position.

In addition to the combinations listed below, many other variations are possible, and should be discussed with IPI Application Engineers.

Notes:

1. **Switch Characteristics:**
   - Contact rating: 10.5 amps at 125/250 volts AC or 28 volts DC resistive, 1/4 HP 125/250 volts AC. Contact module U.L. listed.
   - Alternate action switches: depressing pushbutton from "out" to "in" position changes color bands from one selected color to any other selected color, and button remains latched down. The next actuation restores color bands and switch to the "out" position. Switch and latch interlocked to prevent teasing.
2. **Materials and Finishes:**
   - Switch housing: Molded thermoplastic, optional black or light gray color.
   - Mounting clips: stainless steel.
   - Lamp terminals: brass, gold flashed and tin plated.
   - Switch terminals: brass, silver plated.
   - Cap assembly: molded thermoplastic.
3. **Lamp:** T-1¾ bulb with midget flange base. See lamp selection guide. Pushbutton engages switch plunger with tight friction fit permitting relamp from front of panel without use of tools.
4. **Mounting:** assembly snaps in from front of panel without the use of tools.
5. Terminals accept AMP FASTON receptacle #60729-1 or equal.

- **Housing Colors:** To order switch with black housing color, change second digit of base assembly part number from 1 to 0. Examples: 1023-5-0-120105.

- **Color Bands:** Above part numbers are for switches with white "out" color bands. To order switch with other colors, change first dash no. of part number from 5 to one of the following:

Black	0	Red	6	Blue	11	Orange	16
White	5	Green	7	Yellow	12		

Examples: For red "out" color band: 1123-6-0-120105.

- **Lamps:** To order complete assembly with lamp installed, add lamp no. as 3 digit suffix to part number. Examples: 1123-5-0-120105-327.

LEGENDS

Pushbuttons and color bands may be marked with any letter/number combination space permitting. Specify marking desired after selecting assembly part number designating switch type and color band colors from above tables. Unless otherwise specified all marking will be black, 7/64 in. high. Maximum number of characters per line is nine. Indicate desired marking for pushbutton and each upper and lower color band. Note that pushbutton legend marking does not change when pushbutton is depressed and marking for upper and lower color bands may be different if desired. A sketch similar to the illustrated example should be included with order.

EXAMPLE:
ASSEMBLY PART NO. 1121-5-16-120105
With Special Marking

"Out" Position	OFF	Upper color band (white)
	POWER	Pushbutton legend (white)
	OFF	Lower color band (white)
"In" Position	ON	Upper color band (orange)
	POWER	Pushbutton legend (white)
	ON	Lower color band (orange)

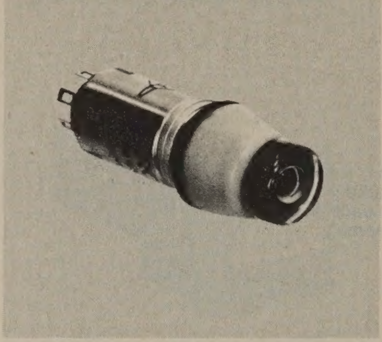
OAK

Presslites, Watertight, Splashproof, and E.M.I. Suppressed

watertight, 3 amp momentary action



This switch features a grey silicone rubber boot and rubber washer which provide a true watertight seal from the front of the mounting panel. The pushbutton screws into the switch base and may be removed from the front of the panel for relamping.

When switching a 3 amp resistive load, life expectancy exceeds 1 million cycles.

The linear action switch mechanism is provided with a special overtravel device which prevents damage to the contacts from excessive pushbutton pressure and assures positive engagement of the contacts at an optimum force. To assure immunity to mildly corrosive environments, all terminals, contacts and springs are heavy gold flashed.

Notes:

1. **Switch Characteristics:**
   - Contact rating: 3 amps resistive at 115 VAC or 30 VDC.
   - Nominal pushbutton travel: ⅛ in. including 1/32 in. pretravel and 1/32 in. overtravel.
   - Nominal operating force: 48 oz.
2. **Materials and Finishes:**
   - Pushbuttons: high impact resistant plastic per L-P-349a.
   - Lens holders: aluminum, black anodized.
   - Rubber boot and "O"-ring: silicone rubber.
   - Mtg. tube and spacers: aluminum, anodized per MIL-A-8625.
   - Keywasher: brass, nickel plated.
   - Lockwasher: stainless steel.
   - Terminal board: molded thermoset plastic.
   - Terminals and contacts: coin silver, gold plated.
3. **Lamp:** T-1¾ bulb with midget flange base. See lamp selection guide.
4. **Mounting:** Recommended mounting tool for tightening mounting nut: Marco-Oak #51630 (Xcelite Inc. #ST62-196 or equivalent).

Notes:

1. **Switch or Indicator Bases:**
   - All Presslite base types shown on pages 7, 8, 9, 10, and 11 except types 534, 535, 543, 546, 563, and 568 may be used with this mounting accessory.
2. **Materials and Finishes:**
   - Pushbutton: high impact resistant plastic per L-P-349a.
   - Rubber boot: gray silicone rubber.
   - Hex nuts and spacers: brass, nickel plated.
   - Lockwashers: stainless steel.
3. **Lamp:** T-1¾ bulb with midget flange base. See lamp selection guide. Lamp may be replaced from front of panel by removing pushbutton.

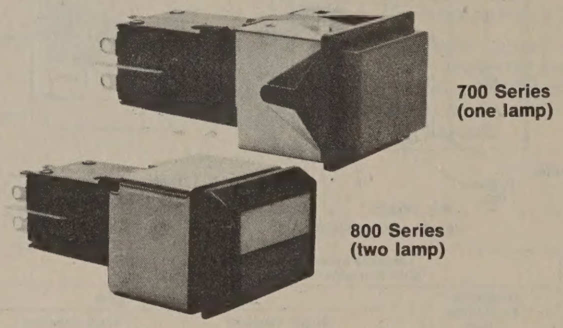
PUSHBUTTON SINGLE & SPLIT LEGEND PRESSLITES

10.5 Amp Snap Action



Either Presslite series—the *700* (single lamp) or *800* (two lamps)—are available with a wide range of legends, colors, styles, actions and mountings to fit your needs.

Five pushbutton styles are available in any of nine standard colors. They come in either single or split legend designs, with or without barriers, in either black or light gray.

Unmatched flexibility. Not only in color and style, but in mountings and actions. You can choose from two mounting styles: A snap-in for fast mounting and a hard-mount for severe conditions.

You can specify momentary or alternate action. Alternate action switches come with a latching pushbutton which remains depressed while the switch is "on."

Our new patented mechanism interlocks the switching and latching actions so it's impossible to "tease" the switch. Either it's on or it's off. Period. Competitive designs require full depression to latch; incomplete depression only provides a temporary closure until finger pressure is removed.

Display options. Applications are limited only by the designer's ingenuity and job requirements. In the simplest application, single lamp models are energized directly by the voltage being switched resulting in direct display of on-off condition. With dual lamp, split legend models, far more sophistication is possible. For instance, the upper legend could light up when the system is ready for a special command. Then when the command is given (by depressing the pushbutton) the light would go out. As soon as the command was executed, the lower legend could then light. Either or both legends might flash on and off to indicate a malfunction or emergency condition. There's no end to the flexibility.

Easy installation and maintenance. Unlike many switches, Presslite assemblies snap in quickly from the front of the panel. The most popular versions take a simple push in and snap, they're in place. Relamping is accomplished simply by removing the pushbutton and inserting the new lamp. If you want to change the legend that's easy, too, because each color legend plate is quickly replaced without removing the whole assembly.

Single lamp pushbutton part numbers

Lens or Filter Color	Pushbutton Style				
	1	2	4	5	8
WHITE	12015	12025	—	—	12085
RED	12016	12056	12046	12056	12086
GREEN	12017	12027	12047	12057	12087
BLUE	120111	120211	120411	120511	120811
YELLOW	120112	120212	120412	120512	120812
ORANGE	120116	120216	120416	120516	120816
LUNAR	120117	120217	—	—	120817
DARK RED	120136	120236	—	—	120836
LIGHT GREEN	120137	120237	—	—	120837

Single lamp pushbuttons are made from butyrate plastic, per L-P-349.
Two lamp pushbuttons are made from polycarbonate plastic, per L-P-393.

- Five Pushbutton Styles
- Nine Standard Colors
- Single or Split Legends
- Momentary or Alternate Actions
- Snap-in or Hard mounting
- U.L. Recognized

PUSHBUTTONS

Styles: Series 700 and 800 Presslites' five standard styles meet most application requirements. Specials, such as hidden legends, are also available. When you require two different styles on a split legend pushbutton, a drawing or sketch should be provided.

Colors: Standard—white, lunar, red, dark red, green, light green, blue, orange, and yellow. Standard colors were selected to provide a pleasing appearance in the "off" position and high light transmission when the lamp is "on." Two different reds and greens are offered for most effective illumination. Dark Red and Light Green provide optimum legibility under high ambient light. Lunar is similar to white, but provides higher light transmission.

Engraving: Presslites are engraved at the factory, or your Illuminated Products distributor can provide custom engraving. Where you anticipate severe service, Style 8 is recommended to protect the engraved legend.

Style 1—One-piece design with wrap-around construction provides colored front and side surfaces.

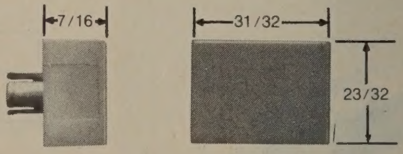
Style 2—Flat colored lens has a 1/32" black opaque frame and black opaque sides. Used where no light transmission through the sides is allowed.

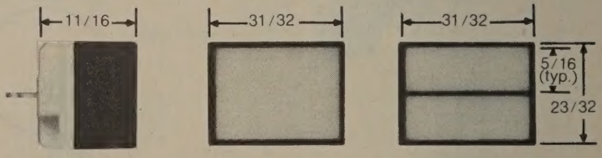
Style 4—This lunar color Style 1 pushbutton has an internal filter of the desired color, which is visible only when the lamp is illuminated.

Style 5—Same as Style 4, but has black opaque sides.

Style 8—Same as Style 2, except colored lens is covered with a clear window. Recommended for applications where the legend must be protected from abrasion.

Single lamp





Two lamp

Two lamp pushbutton part numbers

Lens or Filter Color	Single Lens			Split Lens		
	Style 2	Style 5	Style 8	Style 2	Style 5	Style 8
WHITE	3225	—	3285	3325	3355	3385
RED	3226	3256	3286	3326	3356	3386
GREEN	3227	3257	3287	3327	3357	3387
BLUE	32211	32511	32811	33211	33511	33811
YELLOW	32212	32512	32812	33212	33512	33812
ORANGE	32216	32516	32816	33216	33516	33816
LUNAR	32217	—	32817	33217	—	33817
DARK RED	32236	—	32836	33236	—	33836
LIGHT GREEN	32237	—	32837	33237	—	33837

Part numbers listed for split legend pushbuttons designate the same color lens or filter on both top and bottom. For different colors at the bottom portion, add one of the following numbers: white 5, red 6, green 7, blue 11, yellow 12, orange 16, lunar 17, dark red 36, light green 37. Example: 332512 for white lens on the top, yellow lens on the bottom.

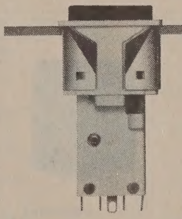
MOUNTING HARDWARE

For most applications, snap-in clips provide more than adequate retention and minimal mounting time. In severe applications involving shock, vibration or substantial wiring harness loads, the sleeve mounting method provides extremely rigid clamping. The sleeve is easily tightened by means of two screws behind the pushbutton.

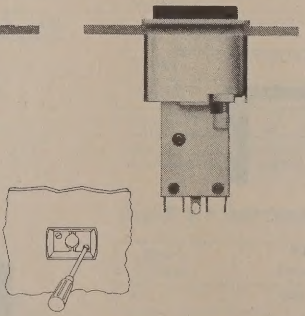
MOUNTING HARDWARE PART NUMBERS	
Snap-in 01	Sleeve 02

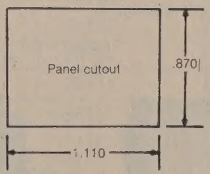
Snap-in clip and mounting sleeve material is stainless steel.
Panel thickness:
Snap-in—⅙" to 3/16"
Sleeve —1/32" to ¼"

SNAP-IN CLIPS



SLEEVE MOUNTING





For vertical stacking, add .942 for each additional assembly.

For horizontal stacking, add 1.182 for each additional assembly.

Tolerances:
±.005 for snap-in
$^{+.015}_{-.005}$ for sleeve mounting

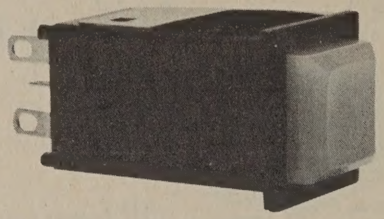
MARCOFLEX SWITCHES



650 Series

- Alternate or Momentary Action
- Double Throw
- Small Size
- Fewer Parts/Higher Reliability
- Low Cost
- Tactile Feel
- High Contact Force
- Mounts in .625 Square Opening or P.C. Board

Illuminated Products' new dimension in low-cost, high-quality small switches has the features of units twice its size. It also represents a major design breakthrough—the first small switch to break the alternate action/double throw barrier. And for application versatility, you can also purchase it as a momentary action switch or indicator.

Immediate applications for Series 650

The first switch to benefit from Marcoflex construction fits into a standard sized .625″ panel opening...or mounts on a P.C. board. It's a direct replacement for the compact switches presently on the market, which offer only momentary action and single throw. You're sure to find many uses for Series 650.

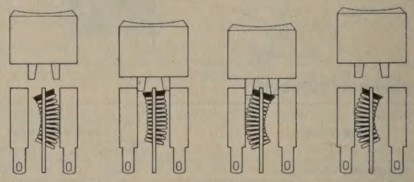
For example, high contact force combines with wiping action and bifurcated contacts to make these units particularly well suited for low level use. They're also ideal for peripheral equipment, eliminating the complex circuits otherwise required to compensate for lack of alternate or double throw mechanical action.

Versatility and low cost broaden the spectrum of applications to include lab test equipment, process control apparatus, broadcast studio controls, vending machines, hotel and airline reservation systems, and much more.

This Form C switch (single pole, double throw) has uniquely simple construction. It's the first to use Illuminated Products' patented Marcoflex design. Lower parts count and easy manufacturing combine to produce a cost-effective switch with inherent reliability.

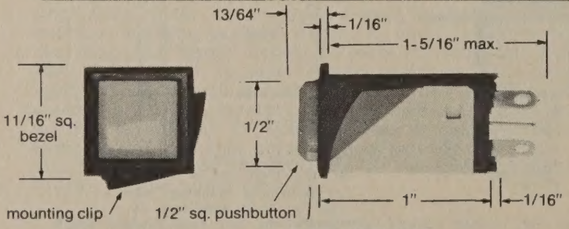
How the Marcoflex mechanism works

The Marcoflex design is based on a compressed spring, mounted in a slot in the common terminal with a slider inserted in the top of the spring. The spring's geometry is such that it stays in a buckled condition. Because of the bi-stable configuration of this assembly, the spring can be buckled to the left or right of the common terminal, turning the switch on or off.

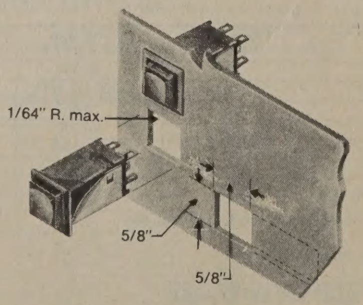


Alternate action begins with switch OFF. As push-button begins descent, right-hand actuator contacts slider disc. Bi-stable spring is forced to the left creating wiping action; switch turns ON. Pushbutton returns to top position. To turn switch OFF, the action repeats in reverse.

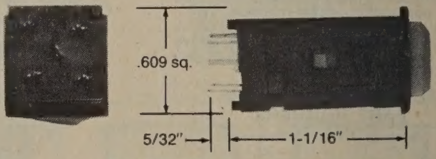
Momentary action switches have reduced contact gap on one side so that the spring does not reach a stable position at the opposite side, and returns to previous position when push-button is released.



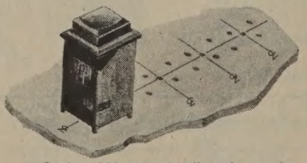
SOLDER TERMINALS



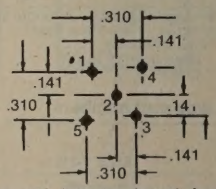
Series 650 mounts in panels from 3/64″ to 3/16″ thick. For horizontal or vertical stacking, add .690″ for each additional unit.



P.C. TERMINALS



Series 650 mounts directly on the P.C. board. Note the location of the P.C. board holes in relation to the fingernail groove and "IPI" logo.



PC board layout, viewed from component side All holes .046 in. diameter. Omit No. 1, 2 & 3 holes for indicators.

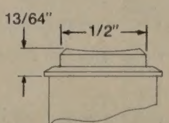


Fig. 1

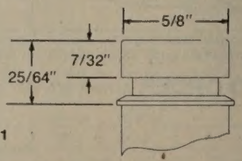

Fig. 2

Pushbuttons are available in ½ inch and ⅝ inch square sizes. The ½ inch size (Fig. 1) features a concave top and solid color construction. The ⅝ inch version (Fig. 2) has a flat top. It is available in solid colors or with black opaque sides.

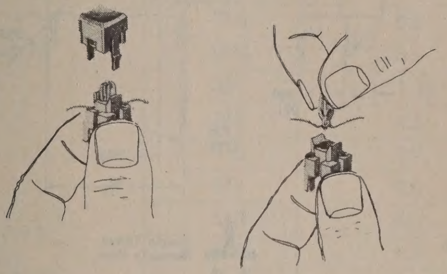
PUSHBUTTON SWITCHES

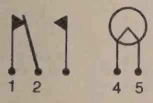
Economical lamps, easily replaced



Series 650 accepts any low-cost, unbased T-1¾ incandescent or AIC neon lamp. Assembled units come with your choice of eight lamps, with voltages from 5-125 volts and rated life of as high as 7,000 hours. Lamps with other characteristics are also available on special order.

No special tools are required to relamp. Just spread the lamp leads as shown, then insert into cavity. Press the pushbutton firmly over the lamp retainer, until parts lock together, then cut the leads off flush.

Schematics



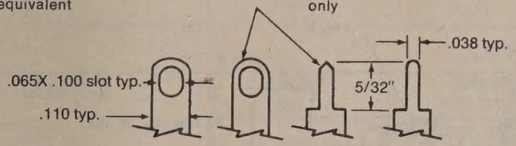
Switch Base

Indicator Base

Terminals

Solder terminals accept AMP Faston receptacle #60415-1 or equivalent

Tip configuration for N.O. (#3) terminal of momentary switches only



Solder Terminals P.C. Terminals

Technical data

Switch characteristics:
- Single pole, double throw (Form C)
- Alternate/momentary action with independent lamp circuit.
- Also available as matching indicator light

Materials and finishes:
- Molded thermoplastic pushbutton
- Molded black thermoplastic base
- Lamp terminals are .012" thick copper alloy
- Stainless steel mounting clip

Contact Rating:
- 1 amp resistive at 30 VDC
- ¼ amp resistive at 125 VAC

Pushbutton travel:
- .08" total

Operating force:
- 12 oz. nominal

Recommended chassis punch:
- Greenlee #731 (⅝" square)

Soldering and cleaning:
To assure clean contacts, solvents or flux should not be allowed to enter the back of the housing. Vapor degreasing should also be avoided.

How to order

A complete part number for an assembly consists of three blocks of digits, like these...

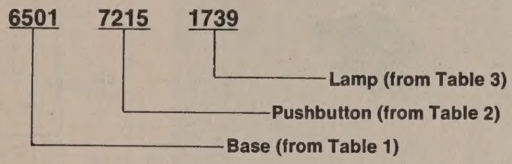


TABLE 1. BASE SELECTOR

Mounting Method	Part Number*		
	Alternate Action Switch	Momentary Action Switch	Indicator Light
Square Panel Cutout (Solder Terminals, 1 clip)	6511	6521	6501
Horizontal or Vertical Panel Stack (Solder Terminals, 2 clips)	6512	6522	6502
Printed Circuit Board Mount (PCB Terminals, no clips)	6610	6620	6600

*Note: Last digit of base assembly number designates quantity of mounting clips which are recommended for the indicated mounting method (0, 1 or 2). A different quantity may be specified by changing this digit accordingly.

TABLE 2. PUSHBUTTON SELECTOR*

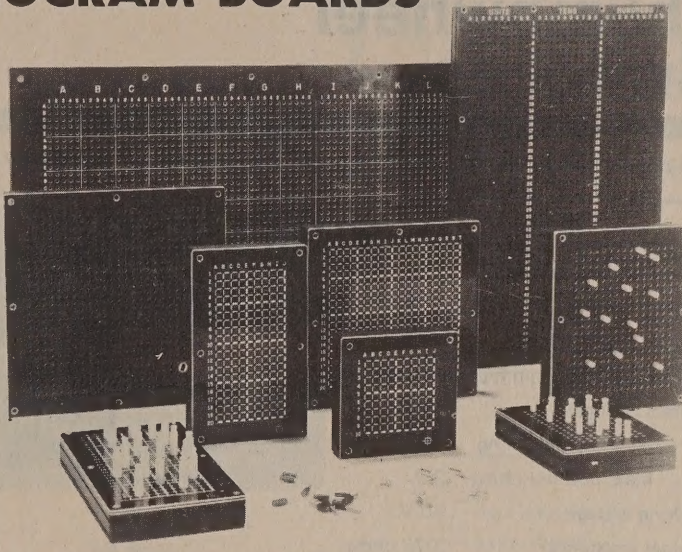
MATRIX PROGRAM BOARDS

GENERAL:

As the result of over ten years experience, INFO-LITE has developed a most convenient, compact and economical system for reliable programming and switching • The Matrix Program Board allows a wide variety of switching/programming functions to be performed by simply inserting programming pins (shorting or diode type) into a 2 to10 deck contact matrix • No accessories such as "read" "write" equipment are required • Matrix Board features have lead them to be favored over such devices as patchboards, card readers, toggle and thumbwheel switches, mag/punched tape and electronic memories • The two basic uses for Matrix Program Boards are: (1) Cordless patching (input-output switching), using shorting pins; (2) Programmable diode matrices (logic memories), using diode pins • A two deck (X-Y) contact matrix is comprised of a set of contact busses (inputs) running at 90° to a second set of busses (outputs) • These two contact levels are isolated except at those crosspoints where programming pins are inserted • Terminals (solder/solderless) are provided on the rear surface for each contact buss • INFO-LITE offers two crosspoint grids: the 2000 Series with .250" grid and the 1000 Series with .130" grid • Panels with 5 x 5 to 100 x 100 crosspoints and up to10 contact decks can be supplied to economically meet your requirements, whether for prototype or production quantities.



FEATURES

- Reliable closed entry contacts
- Rugged programming pins that will not bend
- Rapid & convenient method of programming/switching
- Permits insertion of components into network without soldering
- Replaces costly complex switching hardware
- Attractive and compact package
- Low capacitance for high frequency applications
- Ease of visual program checking

Matrix Boards

INTERSWITCH

ONE OF THE PURDY GROUP OF COMPANIES

770 AIRPORT BLVD., BURLINGAME, CA. 94010 • (415) 347-8217 • TWX 910-374-2353 • TELEX 34-9373

The simple straight-forward method of programming.

There are a number of standard 2-layer matrix boards available, but,

We specialize in custom 2, 3, 4 & 6 layer matrix boards.

Features

☐ Models rated at 2, 6 and 16 amps.
☐ All contact materials gold plated.
☐ Silk-screened inscriptions protected by a clear melamine layer.
☐ Spacing between rows and between columns .1", 3 and 6 mm.
☐ Protected and supported bus bar pairs.
☐ Shorting pins, diode pins and cable pins available.

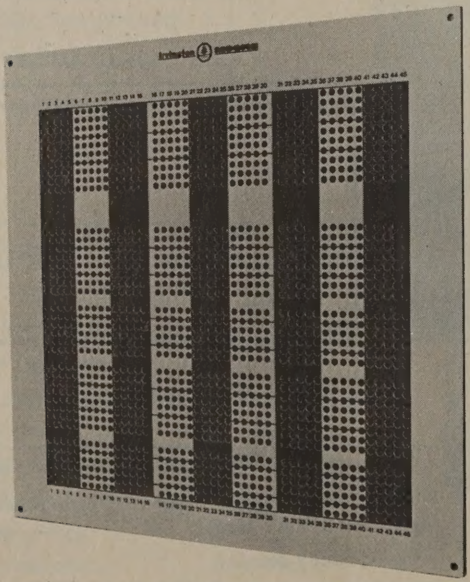
Applications

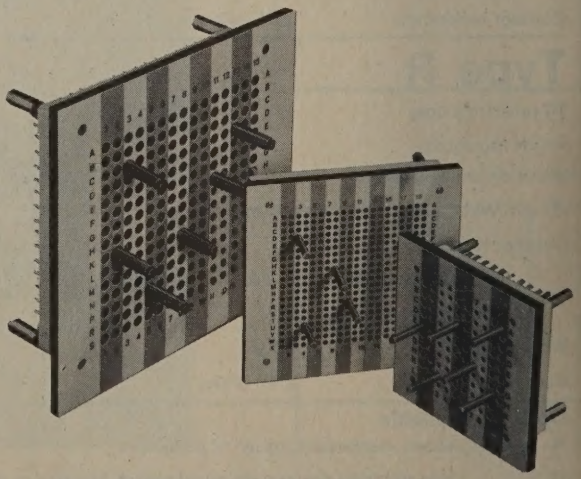
☐ Circuit test programmers.
☐ Reprogrammable diode matrix memories.
☐ Traffic controllers.
☐ Program variables for N-C machine tools.
☐ Memories for computers.
☐ Program variables for process controls.
☐ Power distribution systems.
☐ Lighting systems.
☐ Sound systems.

A matrix board is a manual programming device for electronic equipment. It is designed for situations where flexibility, economy and programming ease must be maximized. The inscribed face provides visual definition of each instruction, simplifying programming. Once programmed, circuits can be left indefinitely or changed as needed. Typical applications include the governing of batch processing, supervising of automatic machines and coordinating test equipment.

A matrix board is mechanically and electrically reliable, and comes in a variety of standard sizes. Custom boards can also be built to customer specifications in varying sizes and hole patterns.

The matrix is built around perpendicular rows of conductors, or bus bars contained in two or more layers. Those running vertically are called columns, those running horizontally are called rows. Where these conductors cross - the X, Y junction - a hole through the face of the matrix board allows a shorting pin to be inserted. A pin placed at that point connects one row to one column and closes the circuit between the two bus bars. Thus the basic function of the matrix board is that of a switch. Its advantage is the combination of switching actions that can be accomplished, and the ability to change, or reprogram the board quickly.





Data Modules

INTERSWITCH
ONE OF THE PURDY GROUP OF COMPANIES

770 AIRPORT BLVD., BURLINGAME, CA. 94010 • (415) 347-8217 • TWX 910-374-2353 • TELEX 34-9373

A Unique Way of Programming

Features

☐ 4 switches per module.
☐ Compact size.
☐ Large visual display.
☐ Quick program change.
☐ Equal to a 1 x 4 matrix.
☐ Available with diodes.
☐ Available with right angle mounting.
☐ Available with changeover contacts.

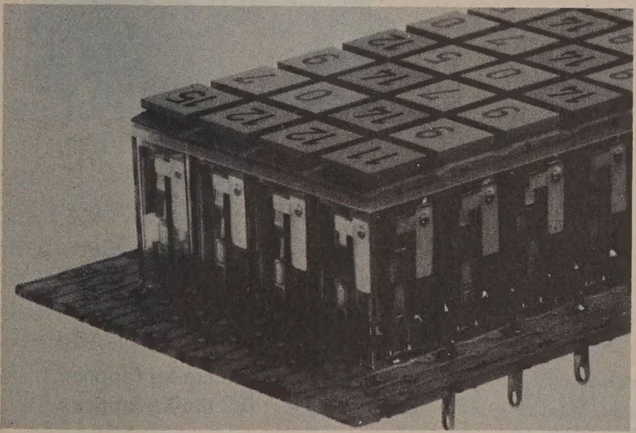
Applications

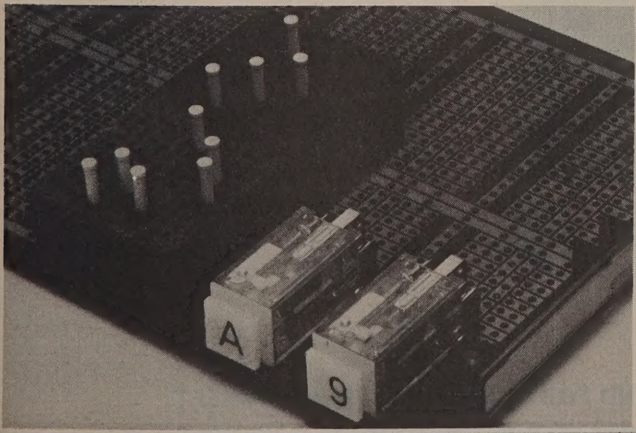
☐ Program variables for process controls for:
- Plastic molding equipment.
- Chemical formulating.
- Soap and cosmetic production.
- Paper products processing.

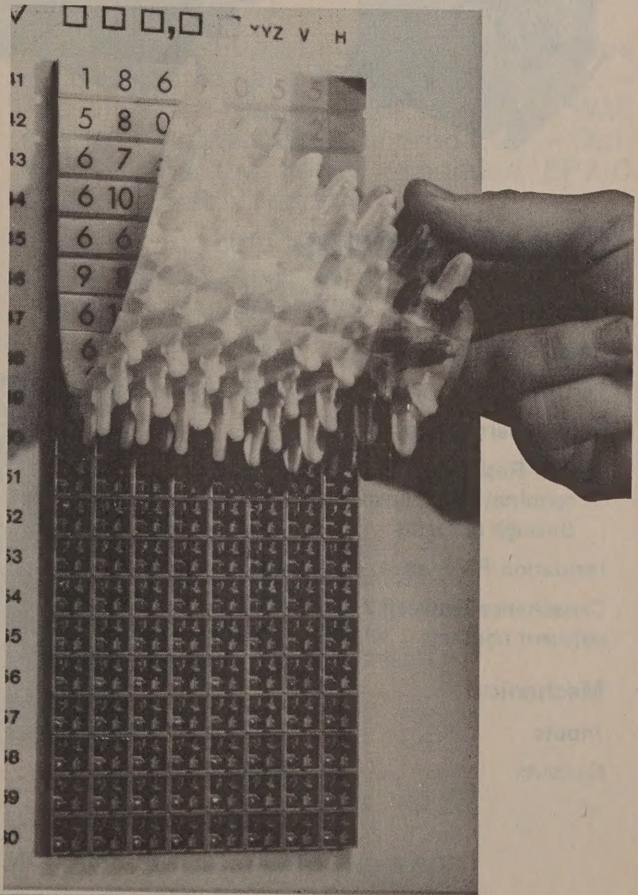
☐ Program variables for N-C machine tools.
☐ Program variables for:
- Computers and peripherals.
- Automatic typewriters.
- Automatic sprinklers.

The Series 300 and 400 Data Modules are 5-terminal miniature coding devices with 1-2-4-8 binary outputs. The output code selection is obtained by inserting one of the 16 different plastic programming keys. The keys selectively close from none to all four of the contacts housed within the Data Module. These units are available with or without diodes in series with the outputs.

The Series 200 Data Modules have four changeover contacts (9 terminals) thereby providing both the binary and complementary outputs.







GRS Rotary Switch

INTERSWITCH
ONE OF THE PURDY GROUP OF COMPANIES

770 AIRPORT BLVD., BURLINGAME, CA. 94010 • (415) 347-8217 • TWX 910-374-2353 • TELEX 34-9373

The INTERSWITCH GRS Rotary Switch was designed for PCB mounting. Two models are available for mounting to vertical PCB's and two models for mounting to horizontal PCB's.

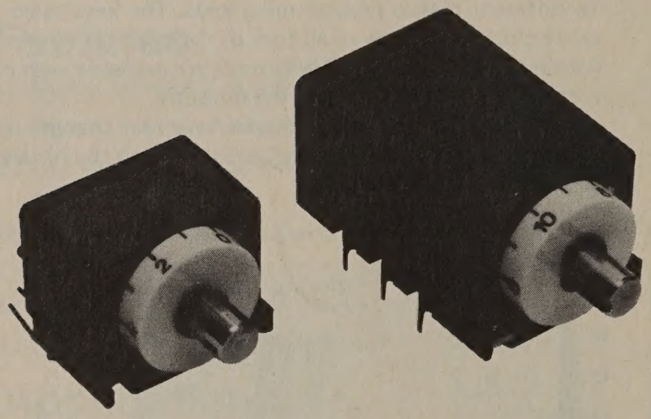
These switches are available with either decimal outputs or binary coded outputs and with the following detent angles:

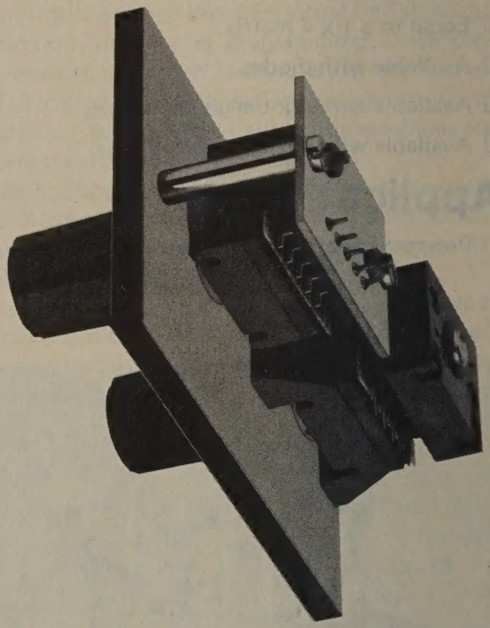
15° (24 position)
22.5° (16 position)
30° (12 position)
36° (10 position)

Stops may be ordered to limit the number of positions to something less if desired.

Switches may be ordered with shorting or non-shorting contacts. In addition, special output codes can be designed to fit your particular needs.

The GRS 1 and GRS 3 Rotary Switches may be ordered with up to four sections. Alternate mounting methods of the GRS 2 and GRS 4 give you greater freedom for your designs. In addition, some special shaft options are also available.





Specifications

Electrical

Rated Voltage	50 V
Test Voltage	500 V
Rated Thermal Current	1 A
Overall Resistance terminal-to-terminal through contacts	< 90 milliohms
Insulation Resistance	10^4 megohms
Capacitance between 2 adjacent contacts	0.87 pF (approx.)

Mechanical

Inputs	1 or 2 per plane
Outputs	Max. 12 per plane

Mechanical Cont'd.

Actuating torque	
30° or 36° detent angle	0.6 cm-kg (approx.)
15° or 22.5° detent angle	0.9 cm-kg (approx.)
Lifetime	100,000 detent operations

Environmental

Temperature Range	-25° C to +70° C

Materials

Au on PCB	2 microns
Au on Sliding Contacts	20 microns
Insulating Material	Polycarbonate, red

vacuum contactors

Vacuum Contactors are used to control large amounts of DC, power frequency and RF currents with ratings up to 50 kv and currents up to 900 Amperes continuous. These contactors are recommended wherever high voltage capability, small size, and high speed operation with a long and low maintenance life are important. Applications include primary control of power supplies, industrial motors, and induction heating equipment, RF system tap changing, and fault protection of high power transmitters. This 12 page catalog provides complete specifications with a variety of specific applications for 3-pole, high voltage AC & DC, RF contactors and overcurrent relays actuated by solenoid, air or motor drives.

This 12-page catalog provides complete specifications on 3-pole vacuum contactors, high voltage AC and DC contactors, high voltage overcurrent relays and high voltage RF contactors actuated by solenoid, air or motor drives. Engineering notes are included that relate ratings to a variety of specific applications.

vacuum interrupters

ITT Jennings offers a line of Vacuum Interrupters for use in power generation and distribution systems. Their high dependability compared with other types of interrupters has been proven in over 20 years of in-field service. In fact, the first commercial vacuum interrupter supplied by ITT Jennings, installed as a line-and-load dropping switch on a 138 kv transmission line, is still going strong. Vacuum Interrupters are simple in principle. They require that only two contacts be separated in a vacuum environment. ITT Jennings builds them with heavy metal alloy construction combined with ceramic envelopes. This inherently high dielectric device provides numerous advantages such as:

- Short actuator stroke, which simplifies operation
- High interrupting and operating speed.
- Rapid dielectric recovery, which minimizes restrikes.
- Very high 60 cps and Impulse Withstand Voltages.
- Extremely small and lightweight for their capacity.
- Quiet operation.
- Long, maintenance-free life.
- Using no oil, they are non-flammable, non-toxic, and non-explosive.

ITT Jennings Vacuum Interrupters are found in applications such as line and load dropping switches on 230 kv lines, and for switching large capacitor banks (usually at 15.5 kv, but they have been used in systems up to 345 kv). They are also used to interrupt transformer magnetizing currents up to 230 kv, for fault interruption up to 115 kv, and to control arc furnaces and other mining equipment at supply voltages up to 24.5 kv.

Twelve-page catalog provides engineering information on the selection and use of vacuum interrupters in various general purpose, utility and industrial applications. Contains complete specifications on vacuum interrupters and special vacuum interrupter switches for RF applications.

GENERAL SPECIFICATIONS

All switches offer maximum protection against radio frequency interference.

ELECTRICAL RATING:
Carry 10 amps continuous.
Make and Break — see individual switch data.

VOLTAGE DROP:
0.1 volt or less at rated amperage.
Initial Contact Resistance: .003 ohm.

LIFE:
10,000 double cycles make and break rated amperage.

TORQUE:
1 to 3 inch lbs.

SWITCHES DESIGNED AND BUILT IN ACCORDANCE WITH THE FOLLOWING SPECS.:
MIL-S-6807 (rotary switches enclosed)
MIL-S-3786 (rotary switches)
MIL-E-5272 (environmental testing)

ON MOST OF THE SWITCHES LISTED, THE FOLLOWING FEATURES ARE AVAILABLE:

- O-ring Shaft and Panel Seal
- Combination of Decks
- Bridging contacts
- Momentary positions
- Isolated positions
- Adjustable stops
- Solenoid driven
- Keylock
- Gang switches
- Concentric shaft switches

JANCO CORPORATION

Series "D" PUSHBUTTON ROTARY SWITCHES

FEATURES: • Totally enclosed, explosion proof. • Printed-circuit construction. • Black or white numbers on black or white background indicate switch positions (black numbers on white background for lighted switches). • All standard codes available. Available in 8, 10, 12 or 16 positions. • Plastic covered buttons, available in black, red, green, yellow, white or blue.

Initial .100 ohms
After life .160 ohms

LIFE:
50,000 cycles
Cycle consists of 720° rotation

INSULATION RESISTANCE:
5,000 megohms

ALTITUDE:
70,000 ft.

TEMPERATURE RANGE:
−65°C to +85°C

PLUNGER TRAVEL:
.180 approx.

DIELECTRIC STRENGTH:
750 volts RMS

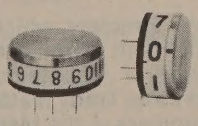
WEIGHT:
½ oz. approx.

Designed to meet the requirements of MIL-S-22710

TYPICAL UNIQUE APPLICATIONS OF JANCO ROTARY SWITCHES

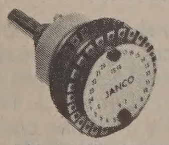
JANCO
JANCO
JMP 36

MINIATURE PIN-TYPE ROTARY SWITCHES
For printed circuit boards and front panel mounting. Various numbers of positions and poles.



MINI CODE SWITCHES
Intended to be used with card racks on ½″ centers, the unit measures ⅜″ high. Can be lighted.

SINCE 1947 . . . JANCO has solved thousands of switching problems! For a quick solution to your specific problem — call JANCO direct.



FOR "DRY" CIRCUIT SWITCHING
To interface with low level and "dry" logic circuits. Available in a variety of detent angles and output codes.

MASTER COMMUNICATIONS SELECTOR SWITCH
Provides standard coded outputs and offers unique switching functions. Only .675″ in diameter.

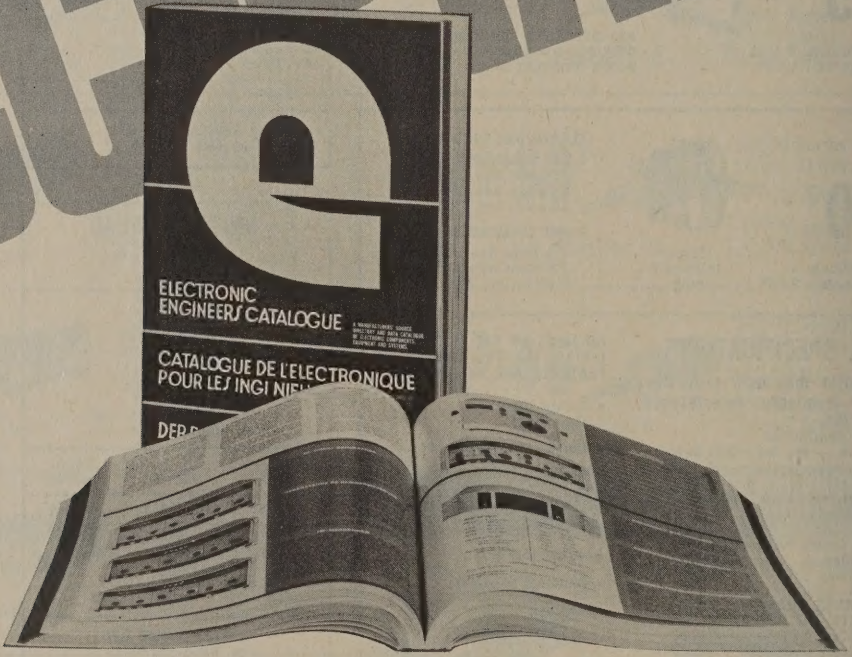
ELECTRONIC ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
DER PRODUKTKATALOG FÜR ELEKTRONIKER

The book is out...and the response is in...

IMMEDIATE AND OVERWHELMING

ACCEPTANCE



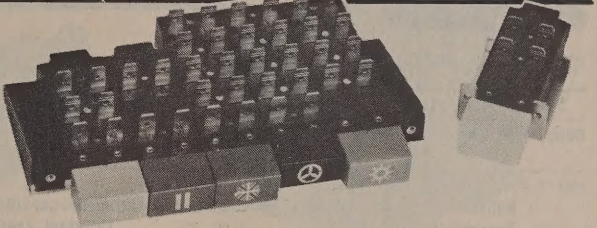
The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to - and from - Western Europe and the United Kingdom.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 products alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe and the United Kingdom. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

United Technical Publications, Inc., Div. of Cox Broadcasting Corp. 645 Stewart Avenue, Garden City, New York 11530 / 516 222-2500

LEDEX PUSH BUTTON CONTROLS



SERIES 1500 / 16A-250 Vac Power Switch

The Series 1500 single and ganged switch assemblies give you many benefits not found in other switches.

Up to five circuits per switch station, in combinations of N.O. or N.C. contacts, enables you to perform more complex switching in less space. Switch single phase, two phase/three wire, or three phase power with one module.

Combine the wide variety of circuits with the interrelated switching logic, such as interlock, reciprocal or master release, or any combination of these for the exact solution to your switching requirements.

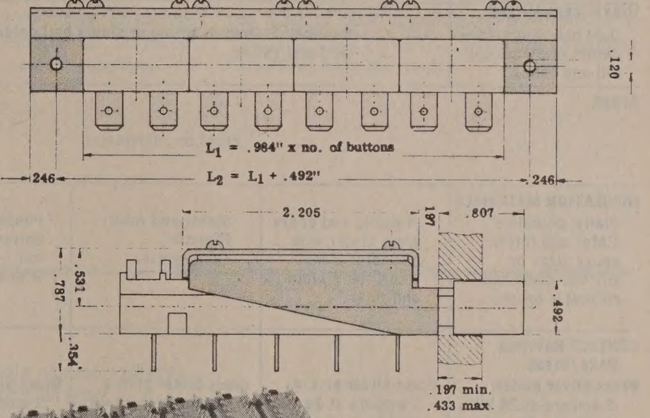
STANDARD FEATURES AND OPTIONS

CAPACITY... single push button to fifteen button assemblies.
CONTACTS... double breaking, silver plated brass.
MAX. CIRCUITRY PER... std. length — 1 NO+3 NC or 2 NO+2 NC or 3 NO+1 NC.
SWITCH MODULE... extended — 1 NO+4 NC or 2 NO+3 NC or 3 NO +2 NC or 4 NO+1 NC.
CURRENT CAPACITY ... 16A/250 VAC resistive.
LIFE, ELECTRICAL @ 10A/250 VAC... 5 x 10^4 with resistive load.
TERMINAL COLOR CODE... red dot — normally closed, no marking — normally open.
TERMINALS... spade lug .248″ x .032″; mate with Amp "Faston" #42844-1 or equivalent.
MOUNTING... two holes for #6 screws or #4-48 tapped plates.
CAPS (NON-REMOVABLE)... size — .49″ x .96″. (Color (opaque) — black, white, red, yellow, green, blue, dark grey, light grey.
LEGENDS... hot stamping or engraving.

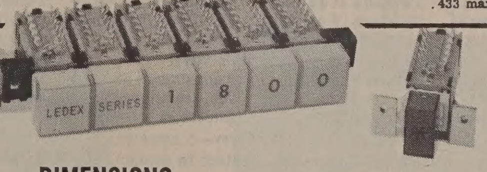
All of this, plus the Series 1500 **saves you money**... when buying them — when installing them — when using them! Priced as low as $.85 per station at the 1000 quantity makes them one of the most economical power switches available. When installing them, simply attach spade terminals to the color coded contacts — eliminate soldering and relay hook-up. You get the biggest savings when you use them. Series 1500's are high-quality switches built to take it. The rugged construction and non-removable caps make these switches ideal for use in vending machines, major appliances, and other equipment subject to heavy use.

License rights by RAFI of West Germany

DIMENSIONS



SERIES 1800/Illuminated Push Button Controls



Tailor the Series 1800 illuminated push button controls to meet your specific switching requirements. You can integrate up to twenty high and low level switch modules on a mounting rail. The modules can be programmed to provide the interrelated release actions and interlock you desire.

The low level modules, with self-cleaning contacts, should be used to switch loads less than 20 watts. They are available with either 2P2T or 4P2T wiping contacts. For controlling circuits up to 6A/250 VAC, use the modules with bridging contacts. They are available with 2 NC, 2 NO, or 1 NC+1 NO contacts.

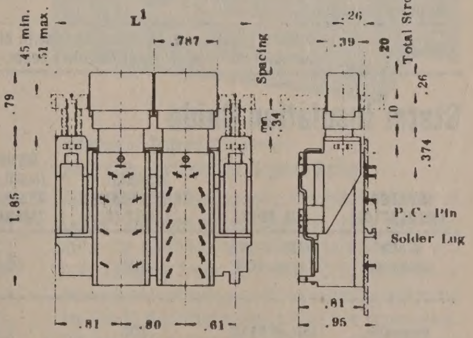
Options include single or dual bulb illumination. Legends can be hot stamped or engraved on opaque and transparent caps. Mylar film legends can be inserted behind the outer button lens on transparent caps.

For ease of installation, assemblies are available with P.C. or solder lug terminals. The solder lug terminals also accept Amp "Faston" #110 connectors or equivalent.

STANDARD FEATURES AND OPTIONS

CAPACITY... one to twenty switch modules on a frame.
SWITCHING ACTION... momentary. Push/push, reciprocal, master, reciprocal plus master release, interlock.
CONTACTS:
WIPING... 2P2T or 4P2T contacts @ 1A/60V. 20W maximum; 10 mA/5V minimum.
LIFE... 1,000,000 actuations @ minimum or 50,000 @ maximum load.
BRIDGING... 1 NO+1 NC, 2 NO or 2 NC contacts @ 6A/250 VAC maximum; 10 mA/20V minimum.
LIFE... 250,000 actuations @ minimum or 50,000 @ maximum load.
MATERIAL... silver plated brass.
TERMINALS... solder lug accepts Amp "Faston" #110 or printed circuit board pins.
LEGENDS... hot stamp, engrave or film insert (see legend chart for standard type).

DIMENSIONS



L^1 = .80″ x No. buttons +.82″

ILLUMINATION... single or dual sockets for T4.6 mm lamps at all stations. Rectangle cap style 7⁄16 x ¾ available in single socket only.
CAPS:
⅜ x ¾ inch.
Opaque... black, white, red, green, yellow, blue, light gray.
Transparent with light diffusing grid or plain... clear, red, green, yellow, blue.
7⁄16 x ¾ and ¾ x ¾ inch.
Opaque... black, light gray.
Transparent for inner cap legend... clear, red, green, yellow, blue.
MOUNTING... front panel mounting with #4-48 screws.

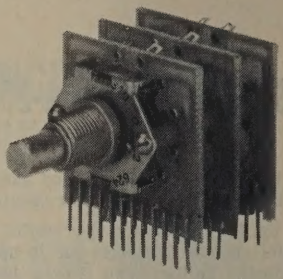
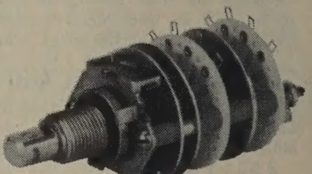
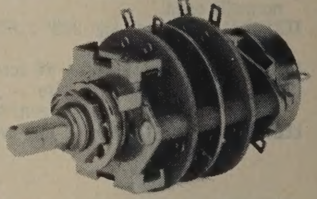
ROTARY MANUAL SWITCHES

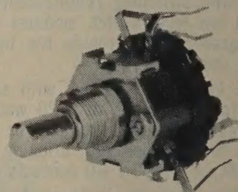
STANDARD SPECIFICATIONS

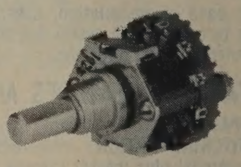
	206, 208, 210, 212	304, 306, 312	404, 406, 412	504, 506, 512	524
CONSTRUCTION	Throughbolts				
SHAFT— Military	¼″ steel, cadmium plated, chromated per QQ-P-416, class 2, type 11 (50 hour salt spray).				
Commercial	¼″ steel, cadmium plated.				
MOUNTING	Steel bushing, ⅜-32 thread, optional ¼ or ⅜ inch, standard length.				
SPACERS	Glass filled nylon, grade G 1/30.				
LOCATING LUG	Standard fixed at .375″ radius; or can be deleted.	Standard fixed at 17/32″ radius; or can be deleted.	Variable at 15° increments except 75°, 90°, 105°, 255°, 270°, 285°.	Standard fixed at 17/32″ radius; or can be deleted.	Variable at any angle ±2° at 17/32″ radius, or can be deleted.
METAL PARTS	All metal parts cold rolled steel with cadmium plating for commercial applications. Chromate dip for 50 to 100 hour salt spray per MIL-S-3786 for military applications. Special materials such as passivated stainless steel or nickel plated brass parts are also available.				
INDEX MECHANISM	Dual ball Starmate detent or single ball hill and valley.	Dual ball Starmate, spring or single ball detent (Hill and Valley).			Single or dual ball detent.
STOPS	Fixed or adjustable.				Fixed at positions specified.
INSULATION MATERIALS	Diallyl phthalate stator and rotor; epoxy glass or silicone glass with polyester rotors.	Phenolic and epoxy glass stator with polyester glass rotor; Kel-F stator and rotor.	Stator and rotor: Phenolic, Epoxy glass.	Phenolic stator with polyester glass rotor; Kel-F with Kel-F.	Phenolic and epoxy glass stator with polyester glass rotor.
CONTACT RATINGS Make/Break	**Brass-Silver plated** .5 ampere at 28 VDC, resistive; .25 ampere at 110 VAC, resistive. **Solid Silver** 1 ampere at 28 VDC, resistive; .5 ampere at 110 VAC, resistive.	**Brass-Silver plated** 1 ampere at 28 vdc, resistive; .5 ampere at 110 vac. **Solid Silver** 2 amperes at 28 vdc, resistive; 1 ampere at 110 vac.	**Brass-Silver plated** 1 ampere at 28 vdc, resistive; .5 ampere at 110 vac. **Solid Silver** 2 amperes at 28 vdc, resistive; 1 ampere at 110 vac.	**Brass-Silver plated** 1 ampere at 28 vdc, resistive; .5 ampere at 110 vac. **Solid Silver** 2 amperes at 28 vdc, resistive; 1 ampere at 110 vac.	**Brass-Silver plated** 1 ampere at 28 vdc, resistive; .5 ampere at 110 vac. **Solid Silver** 2 amperes at 28 vdc, resistive; 1 ampere at 110 vac.
	Carry—5 amperes.	Carry—5 amperes.	Carry—5 amperes.	Carry—10 amperes.	Carry—5 amperes.
	Dielectric—750 volts, contact to contact.	Dielectric—1,000 volts, contact to contact; 500 volts when contacts are insulated back to back.			
	Contact resistance, in accordance with MIL-S-3786, will not exceed .010 ohms initially nor .020 ohms after rotational life tests.				











Stator Insulation Guide

STATOR INSULATION	MIL SPEC.	USABLE TEMPERATURE LIMIT (C)	MINIMUM INSULATION RESISTANCE (MEGOHMS)	
diallyl phthalate	MIL-M-14F type SDG	125	10,000	Most recent material, combines best combinations of desirable dielectric, low moisture, and structural characteristics at prices competitive to phenolic.
Phenolic	MIL-P-3115, type PBE-P	100	1,000	Most economical, most commonly used. Though non-nutrient to fungi, varnish impregnation per MIL-V-173 is available. Meets most military and commercial application requirements.
Epoxy-Glass	MIL-P-18177, type GEE	125	10,000	Economical, excellent structural and dielectric strength. Lower moisture absorption rate than phenolic.
Silicone Glass	MIL-P-997C, type GSG	125	10,000	Good RF characteristics. Lower structural strength than epoxy glass, and slightly higher in cost.
Kel-F	Fedspec L-P-385B	125	20,000	Excellent structural and dielectric strength, low moisture absorption.

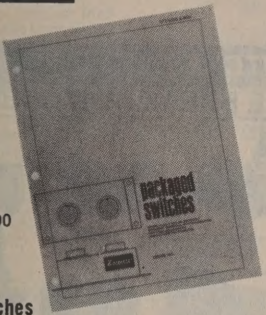
STEPPING SWITCHES/CIRCUIT SELECTORS

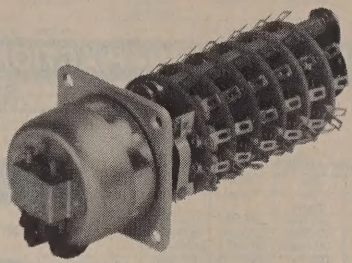


Catalog B-3200

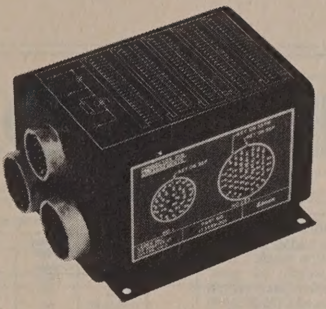
Packaged Switches
Catalog B-3200 provides design guidelines for specifying and using hermetically sealed switches where high reliability requirements or harsh environmental conditions are factors that the designer must consider in the application.

Several stock models, including compact 5 pole 2 throw, 49 pole 2 throw, and 39 pole 3 throw switches, are available for immediate delivery. Circuit diagrams and various switch control methods are given for each of the ten stock models shown.

Custom engineered programmers, variable intervalometers, controllers and management systems are provided as examples of how packaged switches can be tailored to meet a wide range of exacting requirements.



Ledex Stepping Switches
Used for relays, transfer switching, remote control of predetermined circuit patterns, remote sequencing of complex switching arrangements, or in programming checkout and sequential operations. They are known best for their ability to perform multiple switching functions reliably, in limited space, and under severe operating and environmental conditions. Available in open construction, prewired modules or as packaged control solutions.

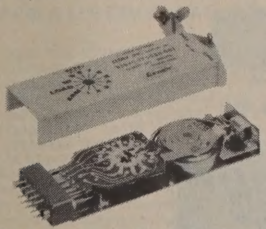


Ledex Hermetically Sealed Switches
Engineered to withstand severe shock and vibration, such as encountered in aircraft, missile and military applications, and to provide added switching reliability in adverse environments. Used extensively in aerospace and underwater guidance controls, as mode selectors, in rocket firing devices, and in a variety of military control functions that demand a high degree of reliability. There are 13 models available from the shelf.

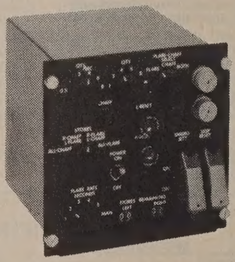
LEDEX PACKAGED CONTROL SOLUTIONS

Here are examples of Ledex Stepping Switches designed into compact, reliable control packages that combine the best characteristics of solid state and electromechanical technologies.

Whether your problem involves armament controls or commercial control functions, there's a good chance Ledex has already solved a similar problem. Our Packaged Switches Catalog, B-3200, shows several more detailed examples and also includes specifications for 13 hermetically sealed switches available from the shelf.



Miniaturized Armament Control Intervalometer
Flat, compact, 12-position stepping switch measures only ½" x 1¼" x 4¼", fires 19 rockets, sequentially in pairs. It includes a Ledex pulser to control time intervals over mil-spec. temperature and voltage ranges.



Dual Channel Flare/Chaff Dispenser Programmer
An all electronic dispenser, except for mechanical counters, allows programming of rate and quantity for flare or chaff dispensing by independent or simultaneous channel operation. Output pulses of up to 10 amperes per channel drive the electromechanical distributor switches located elsewhere in the aircraft. This state of the art experience can also be put to use in commercial applications as well as military. Let us interface your requirements with a "black box" solution.

SEC
MS X 100
MS X 10
INTERVALOMETER

Universal Stores Dispenser Intervals Variable on Digital Basis
All solid state and among the most flexible of Ledex intervalometer designs, this one permits the pilot to vary release intervals to any rate ranging from 30 ms to 9.99 seconds in increments of 10 ms. It includes a stepping switch to distribute sequential fire commands. Timing tolerance is ±10% over a voltage range of 22 to 32 volts and temperature to −55°C to +85°C. The package includes built-in suppression to protect solid state circuitry when switching inductive loads.

PRECISION SNAP-ACTION SWITCHES

BASIC SWITCHES

Type 10. Highly sensitive "serpentine blade" snap action switch. UL rated for precision basic switch appli. 15amps (75-80%PF) 125, 250, 480 VAC. 0.5A, 125 VDC. #6 Screw Term and cup washer.

TYPE 08. Similar to Type 10 series except U.L. rated for industrial control switch applications at 22.5 amps - 125, 250, 480 VAC; 5 amp - 125 VDC; 1/3 H.P. - 125 VAC; and 1/2 H.P. - 250 VAC. To order Type 08 switches, simply change the "10" prefix to "08".

MINIATURE SWITCH

Type 11. High capacity two circuit Double break mechanism with wiping action. UL/CSA listed. SPDT DB. Form Z. ¾ Hp. 250 VAC. 10 amp 125/250 VAC 75%-80%P.F.

HEAVY DUTY SWITCH

Type 14. Industrial limit switch. Uses double break mechanism for high electrical rating. UL listed. 20 amps @ 125/250 480 VAC. 75%-80%PF. SPDT-DB. Form Z.

SUBMINIATURE SWITCH

Type 16. Double break. 2 circuit. UL/CSA listed. 10 amps @ 125/250 VAC.

SUB SUBMINIATURE

Type 18. Double break. Rated: 7 amps @ 125/250 VAC; 3 amps inductive @ 28 VDC. UL listed. Diallylphthalate case.

DOUBLE POLE SWITCH

Type 22. DPDT high current interruption. Rated: 10 amps @ 125/250 VAC, 75-80%PF. UL listed. 10 amps @ RES 28 VDC. Double bearing guide. Wiping action. Beryllium copper switch blades.

DOUBLE POLE SUBMIN.

Type 26. Two Butterfly Double break mechanisms. Both poles operate simultaneously due to special linkage. Uses type 76 actuators. UL rated 8 amps 125/250 VAC, 75-80% PF. UL listed. DPDT-DB Form ZZ). 10 amps. res., 5 ind. @ 28 VDC.

TYPE 16 INTEGRAL LEVER 5 AMP

Series 16-47 INTEGRAL LEVER SWITCH is specially designed to reduce customer cost. It features the Butterfly® double break snap action mechanism with an integral actuator assembly, which resists contact welding, minimizes mechanical bounce and increases electrical life. Additional features are 2 circuit control with 1 switch, and a higher current rating than comparable sized single break switches.

The 16-47 is U.L. approved at 5 AMP @ 125/250 V.A.C., ¼H.P. @ 125 V.A.C. A variety of integral levers are available to suit your individual switching requirements, in momentary and maintained action.

DOOR INTERLOCK SWITCHES

TYPE 76 DOOR INTERLOCK SWITCHES

The Licon Type 76 Door Interlock Switches are low cost mechanisms for the protection of personnel involved in testing and servicing hazardous electronic equipment.

For rugged dependability and quality assurance, the Licon 76-6 Series characterizes the need for a compact subminiature safety device, at reasonable cost.

Under power conditions this design employs the highly reliable Type 16 double break switch for automatic interruption of power when service door or cabinet drawer is entered, and features a manual set (pull to maintain) for the continuation of power when servicing or testing circuits is required.

Following service when door is closed, the actuating rod returns to normal or reset position allowing power to continue.

INDUSTRIAL LIMIT SWITCHES

SERIES 30 DIECAST ENCLOSED

Accurate repeatability, long life and precise electrical control for heavy duty limit, safety and interlock operations. Durable switch protection, multiple mounting and actuating flexibility. Internal basic switch accessible for wiring or replacement by removing bottom plate. Available in a variety of infinitely adjustable actuators. Aluminum housing. Permits adequate wiring room. Has ½-14 internal tab conduit hub. Rated 15 amps, 125, 250 and 480 VAC; ½ amp 115 VDC. Size: 3 x 1 x 2½".

SEALED LIMIT SWITCHES

TYPE 62 & 63 HERMETIC AND ENVIRONMENT FREE SWITCHES

Licon's Type 63 sealed limit switches are designed to resist various environmental containments such as moisture, dust, and oil. Designed for rugged duty, Type 63 meets specifications of MIL-S-8805, enclosure design #3 or #4. Type 63 features a one piece housing with "O" ring seals at the plunger and either epoxy potting or hermetic header and epoxy potting at terminal base. Series 63 operates effectively in ambient temperature ranges of 65° to 185°F, an ice scraper ring and wiper at the plunger insure low temperature performance. For higher temperature requirement consult factory.

Type 63 switches are available in a variety of double break switch mechanisms and terminals, including plug connectors, wire leads either stripped and tinned or with plug connectors. Wire leads are potted at base to insure insulation and strain relief.

Type 63 is bushing mounted. Two corrosion resistant wire lock hex nuts one keyway washer and one internal tooth lock washer are furnished to provide a non-turn mounting. Roller plunger models with adjustable roller orientation have a positive locking nut in addition to the standard hardware.

The Licon type 62 series is a true hermetically sealed environment-free snap-action switch with a maximum leak rate of 1 x 10^{-8}C.C./sec. This switch enclosure is designed to meet the sealing requirements as defined per MIL-S-8805, Hermetic, design style 5.

Roller Plunger

Pin Plunger

SERIES 65 SUBMINIATURE ENVIRONMENT FREE

Dependable, environment-free snap action switching with ratings up to 10 amps, 28 VDC. SPDT 2-circuit configuration. Solder terminals. Quick disconnect, screw and potted leads available on special order. Size: .850" x .875" x .320"..5" mounting centers. UL listed.

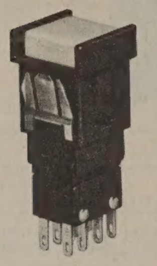
LIGHTED PUSHBUTTON SWITCHES



TYPE 01-665
SQUARE SNAP IN BEZEL ONE LIGHT

Licon's Series 01-665 is a compact, single lamp switch with snap in panel mounting and a choice of bezel, single barrier or double barrier housing. Series 01-665 can be mounted individually or in various strip arrays. The basic switching mechanism is Licon's "Butterfly"® double break snap action switch, available in momentary and alternate action, indicator only. Series 01-665 is UL and CSA listed at 10 amps at 125/250 VAC. Contacts are available in silver or gold plating, for low level switching. Standard terminals are .110 Quick Connect. Series 01-665 accepts standard T1¾ flange base lamps, replaceable from the front panel without tools. Panel cutout .875 sq.

HOUSING DESCRIPTION

Series 01-665 is available in bezel only, double barrier, vertical mount, double barrier horizontal mount, and single barrier. To specify desired housing substitute the following numbers for the X in part numbers shown above.

HOUSING STYLE

1. Vertical row mount with vertical barriers
2. Horizontal row mount with vertical barriers
4. Horizontal row mount with single vertical barrier
6. Horizontal row mount bezel only

Frost Glo

TYPE 01-669
RECTANGULAR SNAP IN BEZEL ONE LIGHT

This versatile switch offers Licon's exclusive "Frost Glo" illumination, solid or projected color lens caps, insertable legend, one piece construction, and front panel mounting and relamping. Mounts in common .855 x 1.095 panel coutout.

The heart of series 01-669 is Licon's double break Butterfly® switching mechanism. Available as single or double pole, with momentary or maintained action. Series 01-669 is rated at up to 10 amps (Form Z) or 5 amps (Form C) at 125/250 VAC. Contact material is solid fine silver; gold is also available for "low level" switching. Standard terminals mate with .110 Faston receptacles. Unit accepts one T-1¾ Flange Base Lamp which can be ordered separately.

Switch rating for gold plated contacts .100 A, 10 VDC Res. Max.

Licon's series 06 Lighted Pushbutton Switches offer exclusive Butterfly® switching action with the verstility of one or two lamp illumination with an excess of 200 display options. Available in either one or two poles with silver or gold contacts, series 06 is rated at 100,000 cycles life at full rated load.

Series 06 offers direct front of panel installation in a .700 x .920 panel cut-out in panels .062 to .140 thickness. The matte black snap-in bezel mount assures rigid retention and permanent alignment. 10 A at 125/250 Electrical Rating. U.L. Listed & C.S.A. Approved. All terminal spacing is .125 minimum (3mm).

All lenses accept T1-3/4 flange base lamps. (1 0r 2) (Order separately)

NON-LIGHTED PUSHBUTTON SWITCHES

76-7 SERIES
15/32-32 BUSHING SIZE

Series 76-7, 15/32 BUSHING SIZE
A "Computer Quality" switch available in either single or double pole momentary or maintained action and rated at 10 Amps 125/250 VAC in Silver or Gold contacts. Combination .110 Quick connect & solder terminals are standard. U.L. and C.S.A. listed. An optional dress bezel nut adds to the appearance of the switch.

76-2 SERIES
¼-40 BUSHING

Series 76-2, ¼-40 Bushing
A momentary action single or double pole switch rated at 10 amps 125/250 VAC — UL & C.S.A. Listed with Solder terminals. Ideally suited for applications where space is restricted. A locking tab located on switch actuator assures positive panel alignment.

PRESS

But that should come as no surprise. Since 1927, Littelfuse has provided the electronic industry with a complete line of fuses, fuseholders, circuit breakers, switches, and relays. Whatever a customer's need, we have a quality product to satisfy it.

But Littelfuse has to do more than keep up with the industry—we have to stay ahead of it. Our research and development engineers are constantly designing and testing to create tomorrow's products—more advanced, more streamlined, more versatile. Low-Profile Snap Mount fuseholders, P.C. Board fuseholders, Twin Microfuse holders, "Twist-Lock" In-Line fuseholders—these are just a few of the products developed exclusively by Littelfuse.

For detailed information on the complete line of Littelfuse products, write for Catalog #17. Or contact our representative or authorized Littelfuse distributor in your area. He will be glad to help you determine your immediate needs—and to help you plan for tomorrow's.

Littelfuse– *first in design and innovation*

P.C. Mounted Holder — 281007
A low-profile, plug-in fuseholder accommodating Littelfuse picofuses and microfuses. Edge-mounted, the holder permits easy and rapid fuse removal and replacement. Rated at 5 amps to 125 volts.

Twin Microfuse Holder — 280021
A versatile twin or single circuit holder for space-tight applications. Accepts two microfuses or a combination of micro and picofuse. Rated at 5 amps to 125 volts.

In-Line Fuseholder — 155100
A low-cost holder with "twist lock" allowing easy fuse extraction and replacement. Accepts all ¼" x 1¼" fuses and SFE fuses to 20 amps. Available in black, transparent or six other standard colors.

Low Profile Fuseholder
Square cap fuseholder snaps into chassis, eliminating need for mounting hardware. The cap snaps open for quick and easy fuse insertion and removal. Aesthetically styled to complement modern instrument panels, the holder is available in several color combinations.

HOW TO ORDER LOW PROFILE FUSEHOLDERS
Six digit number is a coded description of fuseholder

348	6	4	5
A	B	C	D

A Series Number **348** for 3AG Standard fuses, **347** for Pin Indicating.

B Terminal Style: **6**, 3/16" w. quick-connect and solder type; **8**, ¼" w. quick-connect and solder type.

C Bezel Color: Specify **1**, red; **2**, green; **3**, yellow; **4**, blue; **5**, white; **7**, black; **9**, gray.

D Cap Color: Specify **1**, red; **2**, green; **3**, yellow; **4**, blue; **5**, white; **7**, black; **9**, gray.

NOTE: To order a cap assembly **only** for 3AG standard fuses, use 348 series number and insert a **0** in the terminal style and bezel color locations (348 001). To order a cap assembly for 3AG Pin Indicating fuses, use **347** series number and insert a **0** in the terminal style and bezel color locations (347 001). To order a body assembly **only**, use 348 (for 3AG fuses) and insert a **0** in the cap color location (348 850). The body assembly only for 3AG Pin Indicating fuses is identical to 348 series.

Littelfuse offers more than 6,000 kinds of fuses, fuseholders, circuit breakers, switches, and relays, including the following:

¼" dia. x 1¼" long 3AG fuses for electronic circuit protection applications.

311 Series
Glass tube. Medium-acting for automobiles, radios, amplifiers, etc. 4-30 amps.

312 Series
Glass tube. Fast-acting for general fuse protection. 1/100-10 amps.

313 Series
Glass tube. Slo-Blo. Designed to withstand momentary high-current surges but to open quickly on sustained overloads. 1/100-30 amps.

314 Series
Ceramic tube. High interrupting capacity up to 10,000 amps at 250 volts. 1/8-30 amps.

All fuses shown above can be supplied with pigtail leads for "Soldered In" applications. Similar electrical performance also available in 9/32" x 1-1/4" and 13/32" x 1-1/2" Fuses.

342 (000) Series
3AG Miniature, Space-saving Panel Fuseholder. Rated at 20 amperes to 250 volts.

341 (000) Series
3AG Panel Fuseholder with screw driver slot knob. Rated at 15 amperes to 250 volts.

342006
3AG Watertight Panel Fuseholder. Rated at 20 amperes to 250 volts.

344 (000) Series
3AG Indicating Fuseholder for visual display of blown fuse. Two lens styles available. Rated at 20 amperes to 250 volts.

340255
3AG Shielded Fuseholder. Eliminates radio frequency interference. Rated at 30 amperes to 250 volts.

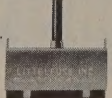
Subminiature Picofuse
9/32" long x 3/32" dia. Axial leads—275 (000) Series. Radial leads—276 (000) Series. 1/16-15 amps to 125 volts.

Subminiature Microfuse
Plug-in or pigtail types with transparent or metal caps. 10,000 amp short circuit capacity. 1/500-5 amps to 125 volts.

Subminiature Fuseholder
For picofuse and microfuse. Available in standard, indicating, or R.F. shielded types.

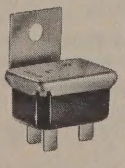
Fuse Clips
Available with solder lugs, with and without fuse stops and for printed circuit board mounting.

Fuse Blocks
Open fuse mountings with solder, screw or quick connect terminals. 1-12 poles.



Circuit Breakers
Manual reset breakers. Rated currents 4/10-4.1 amps to 250 volts.

Switches
Momentary action SPST switches. Rated at 5 amps-125 volts or 2.5 amps-250 volts.



Relays
Low voltage power relays for automotive, marine and recreational vehicle applications.

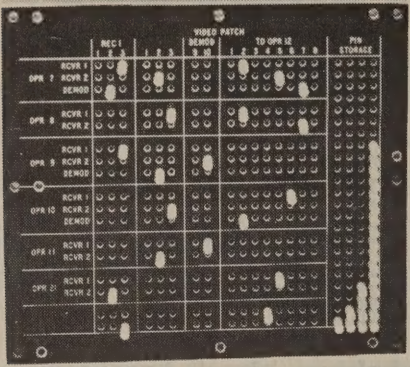
MATRIX BOARDS
SLIDE SWITCHES
LIGHT INDICATORS

MATRIX PROGRAM BOARDS



CO-ORD Matrix Program Boards are composed of 2 to 10 decks of contacts that are bussed on .250 centers. The contact rows of one deck are usually oriented perpendicular to the rows of adjacent deck(s) so as to obtain switching crosspoints. Electrical connections of the bussed contact rows are effected by inserting shorting pins at the desired crosspoints; "CO-AX", phone plug type pins are available for networks which require component insertion (Diodes, resistors, etc.). Single board matrices of up to 11,000 crosspoints are available in standard or special arrangements. Bussed and isolated contacts can be had alone or in combination. Panels may be screened, engraved, or fitted with pre-punched templates for rapid program changing.

U. S. Patent No. 3,349,361

APPLICATIONS

- Computer memories
- Cordless patch panels
- Function generators (Analog/Digital)
- Power distributors
- Thermocouple signal selectors
- Circuit/Component test programmers
- Lighting systems (Special effects)
- Variable sequence selectors
- Variable diode matrices
- Code generators
- Traffic control panels
- Decade switches
- Vending machine control
- Numeric controlled machinery
- Data channeling and logging
- Communications distributors

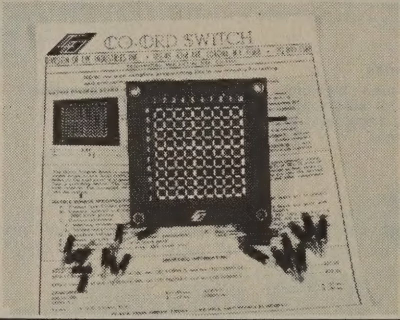
FEATURES

- Closed entry contacts
- High mechanical environment capacity
- Low interlead capacitance
- Attractive and uncluttered
- Compact package
- Standard sizes available
- Permits insertion of components into network without soldering
- Wide variety of switching combinations

SPECIFICATIONS

- Contact Resistance
  - a Total Pin Resistance: .004 OHM MAX.
  - b Volume Resistivity of Strip: .003 OHM/IN
- Breakdown Voltage: 1000 VRMS MIN.
- Current Capacity: 5 AMPS Continuous (up to 100 amps on special application)
- Materials:
  - a Plastic Parts: Black Phenolic XXX
  - b Flexible Contacts: Heat Treated Beryllium Copper
  - c Terminals: Brass
  - d Finishes: Gold, Silver or Nickel

PROGRAM BOARD KITS



KIT BPS-1 consists of a 10 x 10 matrix board similar to #63014-1, below. 10 shorting pins and 10 "CO-AX" diode pins with 1N270's installed **$30.00**

KIT BPS-2 is the same as BPS-1 but without diodes **$25.25**

10 x 10 matrix board	**$20.00 ea.**
Shorting pin	.17 ea.
Diode pin w/1N270	.99 ea.
Diode pin w/o diode	.51 ea.

AVAILABLE FROM STOCK

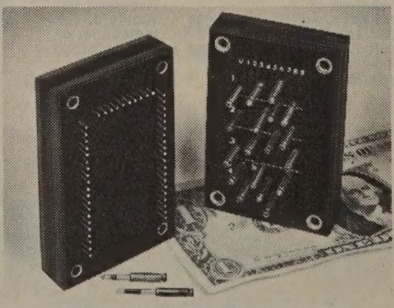
AVAILABLE FROM STOCK. ADD DASH NO. (1 Thru 9) MATRIX SIZE.

MINIATURE PROGRAM BOARD

.100 and .125 inch Center Line



TENTH INCH MATRIX AT $.08 PER POINT

These Matrix Program Boards are designed to meet the increased technological requirements for miniaturization in electronic systems and equipment. They have all the same features of the larger matrices and can be supplied in from 2 to 4 decks of bussed contacts. Single matrix boards of up to 2500 crosspoints can be furnished in one solid unit, with rugged Shorting and CO-AX (diode) pins available for programming functions. A standard 2 deck matrix measures .315 inches thick from the front to rear panel; program pins are .280 inches long by .063 inches in diameter. Termination of the bussed contacts are to .040 diameter pin terminals, which allow the matrix to be plugged into mating female receptacles or connected to directly by wave, dip, or hard soldering. Contact resistance is only .005 ohms per crosspoint; breakdown voltage 600 VRMS; current capacity 3 amps continuous.

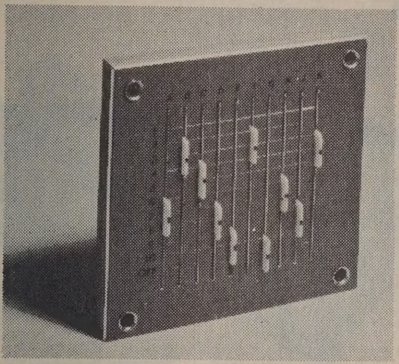
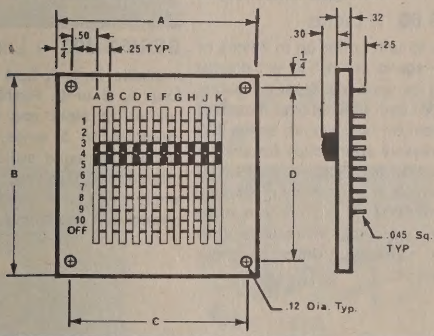
MATRIX BOARDS
SLIDE SWITCHES
LIGHT INDICATORS

MATRIX SLIDE SWITCHES





CO-ORD Matrix Slide Switches are designed to provide reliable, low cost matrix switching for applications requiring manual data entry operations. These simplified, versatile switches are available in various ranges of standard sizes, with capacities including up to 25 outputs per switching line. Each output is controlled by a separate contact slider which in turn can provide as many as 25 positions (variations). Special designed Matrix Slide Switches can be supplied with as many as 5000 switching positions.

Switching quality and reliability is achieved through such advanced designed features as; positive detent positioning resulting from the unique individual GSD (Guide-Slide-Detent) Housing, panoramic viewing of the switching functions facilitating rapid circuit selection and minimizing data entry error, rugged solid block closed construction containing each contact and slider in a basic unitized assembly, electrical and mechanical integrity assured through the use of only the highest quality materials.

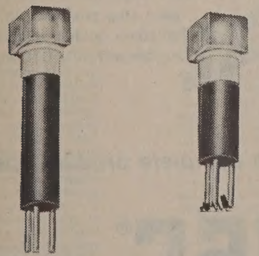
STANDARD OR SPECIAL CONFIGURATIONS



MINI-TRANS subminiature Transistorized indicator lights

The MINI-TRANS series incorporates a silicon planar transistor, either NPN or PNP, which will turn on the indicator and provide an extremely bright indication from signal levels as low as 0.30 mA. In addition to standard circuits, specially designed physical and electrical configurations can be furnished to customer specifications. Units can be supplied with a built-in resistor of any standard value. This unique transistorized design capability is ideally suited when extremely low level signals are used for front panel indications, assuring long life and maximum brightness. A wide range of standard incandescent lamps are available to meet your requirements. Except for the increased length of the housing, these indicators are compatible and have all the features of the MINI-BRITE series.

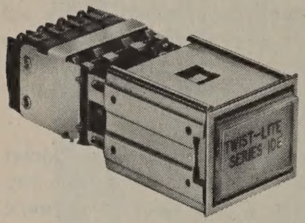
RUGGED, DEPENDABLE Control Panel Components for Demanding Applications...

Lighted Pushbutton Switches



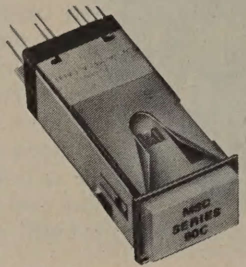
SERIES 10 & 12 4 Lamp

A modular approach to lighted pushbutton switches offering front of panel relamping and relegending without tools. Series 10 features positive hard-mount sleeve; Series 12 features spring-clip mount. Individual lamp color control; full or split displays in colors; up to 4 lines of engraved legend on ¾" x 1" display face. Snap on switch modules in momentary or alternate action; 2PDT or 4PDT. Withstands environmental extremes. Many optional accessories. Units to meet MIL-S-22885.

VERT
MANUV
FAIL
800 SQUARE TELLITE

SERIES 800, 820 & 830 4 Lamp

Rack-Mounted/plug in lighted pushbutton switches. Series 800 offers ¾" square display face; Series 820 offers ¾" x 1" display face; both models offer solid-state switching, as well as snap-action. The Series 830 is a shortened version of the Series 800 requiring approximately 1.36" less behind panel space. All units feature front of panel relamping or relegending without tools. Full or split displays in colors. Each unit available as either switch-lite or indicator-lite only assemblies with up to 4 lines of engraved legend. Withstands environmental extremes. Many optional accessories. Units to meet MIL-S-22885/80.



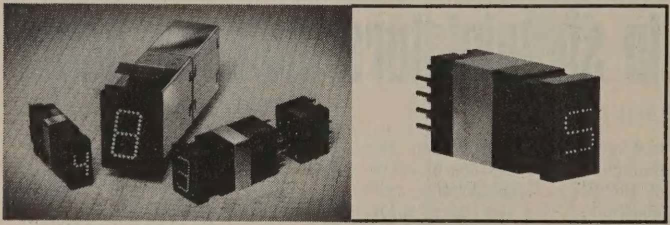
SERIES 90 2 Lamp

All Series 90 units offer up to 3-lines of engraved legend on ½" x ¾" display face. Full or split displays in colors. Series 90E and 90K utilize mounting tabs for positive hard mount; Series 90C utilizes pressure spring-clips for snap-in mounting. 90E and 90K offer 2PDT or 4PDT alternate or momentary switching; 90C offers SPDT or 2PDT alternate or momentary switching. Withstands environmental extremes. Units to meet MIL-S-22885/58.

SERIES 600 1 Lamp

Available in 1, 2, 3, 4 and 6 pole, form A, B or C. Pushbuttons in 6 colors; 12 sizes and shapes. For loads up to 2 amps, multi-point, sliding bifurcated switch contacts offered; for loads up to 5 or 10 amps, long-life snap-action contacts offered in 2-pole form C.

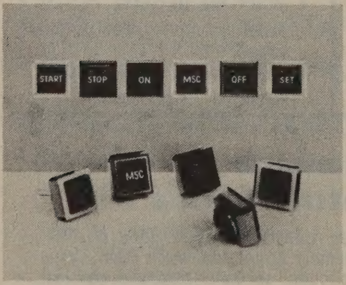
Readout Displays



SERIES 900 Fiber Optic Readouts • Model 925 High-Brightness

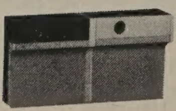
Fiber optic tubes transmit light direct to display face in easy-to-read dot-pattern segments. Incandescent lamps or light emitting diodes (LED) used as light source. These units deliver greater light intensity than can be achieved with conventional tube type, projection or bar segment readouts, due to the maximum efficiency achieved in light transfer from the source to display screen through fiber optic tubes. Model 925 offers display brightness of 2000 foot lamberts. High readability is achieved in direct sunlight with a 15:1 contrast ratio. Available in both 7 or 16 segment displays for both numeric and alpha-numeric presentation. Decoder/driver circuitry available in some models. Character heights from .27" to .85".

Solid State Touch Activators



SERIES 400
Sealed Units

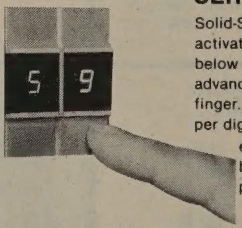
Completely sealed solid-state touch-activators for solid-state switch circuits. Provide protection against environmental extremes. Touch to activate; no pushing, pulling, or flipping of switches. No mechanical contacts; no contact bounce. Up to 3 lines of engraved legend, with or without LED status lights. Bezels available in variety of colors.



SERIES 440 Low-Cost Units

Touch to activate. Design style compatible with Series 481 Thumbwheel. Color coded legend plates, with or without LED status lights. Brushed aluminum touch-plate. Use with CMOS, TTL, DTL or HTL. Snap-in mounting.

Solid State Thumbwheel Switches - Touch-Activated



SERIES 481

Solid-State Thumbwheel Switch with touch activation. Simply touch the "touch-plate" below the numeric display, and the switch will advance, step-by-step, until you remove your finger. Stepping advance rate is 0.3 seconds per digit. Bright numeric LED display indicates each step position. No rotating of cumbersome ratchet wheels. Circuitry compatible with TTL, DTL and HTL.

Solid-State Voice Readout Systems Also Available

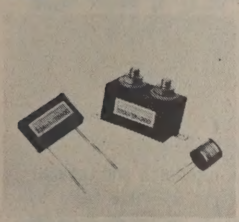
CIRCUIT PROTECTORS

MCG

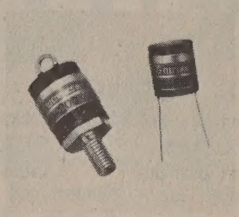
AC POWER LINE PROTECTION

TSA



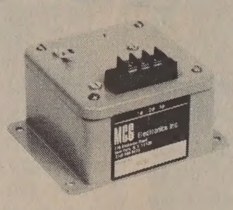
The TSA units will prevent transient damage by rapidly switching from an open circuit to a clamping state whenever a transient voltage exceeds the clamping threshold. These units operate on overvoltages of either polarity and recover automatically when the transient disappears. The TSA-1.7's & TSA-3 units are especially suited for connection across the AC line. Voltage clamping from 4.7V to 400V peak.

LA-LD



On sensing an overvoltage situation, (of either polarity), the AC Crowbar unit will turn on rapidly to heavily shunt the AC line being protected. The resulting overcurrent will operate the line circuit breaker or fuse. LA & LB units are often used as AC overvoltage monitors to energize circuit breaker trip coils. Suitable for 120 & 240VAC single phase service at 2.5A to 80A RMS.

SERIES P



The Series P operates rapidly to prevent damage to equipment operating on the AC power lines, by switching rapidly to a clamping state whenever a transient exceed the clamping threshold. The units operate on overvoltages of either polarity, on 1ϕ and 3ϕ lines and recover automatically when the transient expires. Severe transient conditions cause the protector to switch to a crowbar mode and cause an external fuse or circuit breaker to operate. Available for 120, 240, 380 & 440VAC lines, 1ϕ & 3ϕ service.

MCG SERIES

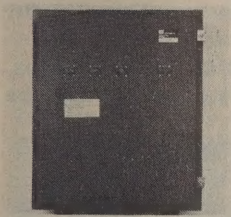
MCG series of AC line Protectors is designed to rapidly clamp (in nanoseconds) substantial transients of either polarity to safe levels. Energy handling capabilities range from 160 joules to 480 joules and is available for use on 120, 240, 277, 380 & 480VAC RMS lines in 1ϕ & 3ϕ service. LED's indicate line status & integrity of internal fusing.

MIL STD

This MIL STD-1399 AC line Protector is designed to operate on a 120VAC, 10A line and limit a 2500 transient spike (1200V at 40us) to less than 400Volts max. This unit is inserted between the equipment being protected & the AC power line, will operate at nanosecond speeds, and limit transients of either polarity.

DC POWER LINE PROTECTION

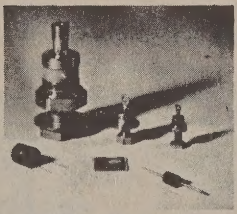
PTSA



The PTSA units are AC power line transient suppressors that are designed to absorb high energy transients (120-450 joules) that can appear on 120V, 240V, 380V & 480VAC lines in single and three phase service.

The PTSA operates rapidly to prevent transient damage by switching from an "open" circuit to a clamping state whenever a transient voltage exceeds the clamping threshold, and clamps transients very hard once the threshold level is exceeded.

TSD



The TSD series is a group of easy-to-use transient suppressors that are well suited to protect a wide variety of electronic equipments from failure due to high voltage transients.

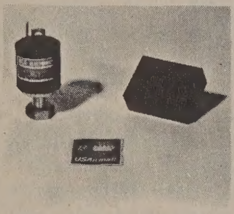
These units will rapidly clamp, by zener action, an incoming voltage transient to a selected voltage level by diverting the transient energy through itself for the duration of the overvoltage. Recovery is automatic when the transient expires.

Clamping voltages from 4.7V to 800V are available with energy levels from .1 to 30 joules.

LVC-1

The LVC-1's are overvoltage protectors that sense when a DC overvoltage is occuring and switch rapidly from an "open" to a virtual "short" circuit within microseconds. Any potentially destructive energy from transients, maladjustments, series regulator faults etc. is now provided with a very low resistance path around sensitive components, such as IC's, transistors etc. TRIP voltages from 5.2V -600V @ 3A to 470A current levels are available.

LVC-10



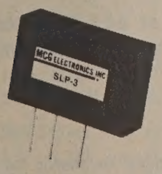
Provides Clamping and Crowbar Protection in a single package. The initial transient is zener clamped for a fixed interval (adjustable) and then the LVC-10 switches to a "brute force" crowbar (short circuit) mode, if the transient persists. Avoids NUISANCE tripping in electrically "noisy" areas. The LVC-10's are available with clamping voltages ranging from 4.7 to 100V at currents from 3A to 235A.

CCB-10

Series CCB Clamping Crowbars determine automatically on an energy basis whether a clamping or a crowbar type of protection is required. For low energy transients, the CCB merely clamps the transient to safe levels. For large energy transients, the CCB will switch to a crowbar (shorting) mode to provide brute force protection. Clamping voltages from 5.3V to 200V at current levels of 3A to 235A are available.

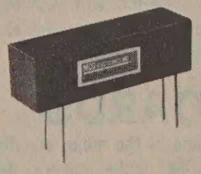
SIGNAL/DATA/TELEPHONE LINE PROTECTOR

SLP-2, 3



THE SLP −2 & −3 protectors were expressly designed to protect signal/data/telephone lines from transient overvoltages (ANSI C37.90A) caused by lightning, heavy machinery, elevator motors generators, etc. The SLP interfaces between the signal line and the sensitive circuit to provide a sophisticated blend of high speed (nanoseconds) voltage limiting and brute force protection. The SLP's recover automatically to standby when the need for protection has passed. Protection levels range from ±6 to ±200V.

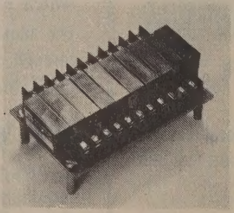
SLP-4



The SLP-4 protectors are dual versions of the SLP-3 protectors and are designed to protect both the input and return circuit lines of a single circuit from the effects of transient overvoltages. (ANSI C37.90A) Protection levels range from ±6V to ±200V.

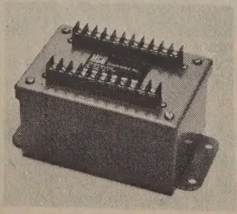
The new SLP-4 interfaces between the signal lines and the sensitive circuit to provide low cost, high speed protection.

MULTIPLE SLP



Up to 10 SLP-2's or SLP-3's modules can be mounted on a heavy duty printed circuit board. Fitted with input and output terminal strips to facilitate ease of installing or retrofitting. The assembly can be mounted flush with a chassis or supported ¼'' or more above the chassis. With a full compliment of SLP's, the board & components will fit in a 5¼ × 3'' × 1½'' (L×W×H) area.

ENCLOSED SLP



SLP-2 and SLP-3 units are incorporated in a heavy duty steel enclosure to provide an easy method of installation in the field. Up to 20 SLP units can be accomodated with input and output terminal strip connections provided at the top of the box. Installation is easy. Bolt down the box & then insert signal inputs & outputs under the appropriate terminal strip screw & tighten.

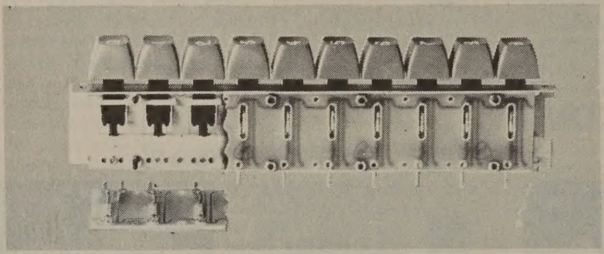
Maxi-SWITCH
KEYSTRIPS AND KEYBOARDS

The Maxi-Switch Company is a leading producer of pushbutton switch components and switch assemblies for the computer, photo-copy, business machine, automation and peripheral equipment industries.

The Maxi-Switch Keystrip construction technique facilitates the design and production of custom keyboards. Individual pushbutton stations may be purchased singly, in Keystrips, numeric blocks, or as completed Keyboards, with or without encoding circuitry. The wide range of features, options and accessories complement Keyboard adaptability.

1600 & 1800 KEYSTRIPS



1600 KEYSTRIP

Maxi-Switch Keystrips present a unique approach to switch construction. These modular units offer long mechanical life and high quality in readily available, off-the-shelf assemblies. Combinations of different contact types, contact forms and plunger actions may be used within a single Keystrip. Up to 20 or more stations may be accommodated per Keystrip with standard spacing of ⅝″ or ¾″ between stations. Other spacings are optionally available.

Standard Series 1600 and Series 1800 switches are equipped with glass reed contacts, and differ only in frame height and available options (1600—1.5″ high, 1800—1.1″ high). Contact options (1600 only) include cross-bar palladium leaf contacts and 15 ampere snap-action power contacts. Reset and lockout solenoids may also be used with Series 1600 Keystrips.

Individual reeds may be tied to a common bus on one side, or brought out to separate terminals, depending on the requirements of the application. The common bus feature saves component and mother-board space, and requires fewer solder connections.

SPECIFICATIONS

BUTTONS:

A variety of lighted and unlighted buttons available in several colors. Ask for Maxi-Switch Bulletin MS 2500 for information on buttons and Keystrip/Keyboard illumination.

TERMINALS:

Printed circuit, pierced solder lug, plug-in male/female contacts, wire-wrap, .110 quick connect.

CONTACTS:

Glass Reed, Form A or B, 28 VDC @ 250 Ma.

Cross-Bar Palladium leaf contacts, Form A, B or C (1600 only). 3 Ampere @ 28 VDC, 3 Ampere @ 115 VAC.

Snap Action Power Contacts (1600 only). 10 Ampere @ 250 VAC, ½ Ampere @ 125 VDC; or 15 Ampere @ 250 VAC, ½ Ampere @ 125 VDC.

PLUNGER ACTIONS:

Momentary Contact (standard)
Interlatch and Lockout
Alternate Action (push-push)
Lockout Only
Key Motion Sensing
Cross-Bank Interlatch and Lockout

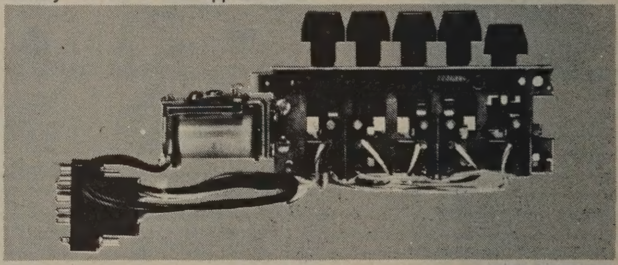
1200 & 1400 KEYSTRIPS

Series 1200 and 1400 Keystrips feature two-piece steel frames as the basic structure, with pushbutton components mounted between two frame halves.

Series 1200 and 1400 Keystrips may be lighted with one or two lamps per switch station (Form A lamp contact not available on 1400 switches with more than 3 bits). Midget groove T-1¾ bulbs are used. Lamp sockets may be furnished with solder lugs, AMP 78 Series taper tabs, 3″ pigtail lead wires, or with common bussing.

Series 1200 Keystrips provide circuit switching of up to 20 positions per keystrip. Many action options are available, and variations of standard design may be quickly accomplished using basic shelf stock for fast prototype and production service.

The range of available contact forms (A, AA, B, C or F), plunger actions, terminals and buttons allow the designer to specify switches which are exactly suited to the application.



1200 KEYSTRIP

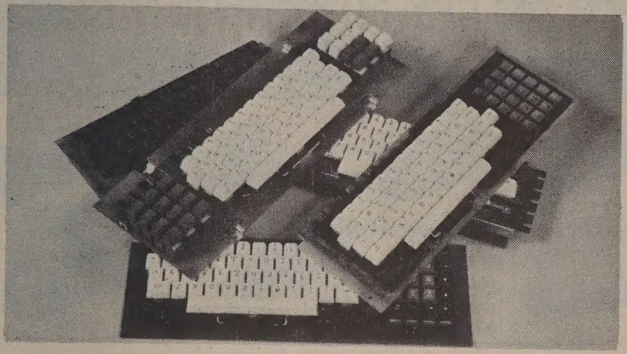
Maxi-Switch offers the newest concept in binary coded decimal switching. Series 1400 switches represent a significant advancement in the development of simplified mechanical encoding techniques, eliminating the maze of contacts, diodes, and interconnections normally associated with switch encoding.

The Maxi Binary Switch will provide 3, 4, 5 or 6-bit binary output through snap-action contacts rated at 3 amperes, 300 watts, Form "A" (SPST/NO) or Form "C" (SPDT).

KEYBOARDS

Maxi-Switch is one of the major suppliers of encoded keyboards for data terminals and other alpha/numeric data entry applications. Users may choose from a wide range of standard off-the-shelf versions such as ASR-33, ASR-37, APL 3270 and ANSI Standard. Smaller styles such as the popular 16-key encoded hex pad or 12-key, wired-only pad are also available at attractive prices.

Chances are Maxi-Switch can supply your keyboard need with a standard product, and that means a savings of both time and money. For specific information, ask your local Maxi-Switch representative for a standard keyboard catalog, or contact the factory directly. Maxi-Switch invests as much in good customer service as in innovative keyboard design. We try hard to do business on your schedule. If that sounds like a refreshing change, give Maxi-Switch a try.



The Maxi **standard** keyboard line includes several series, with many variations available within each.

Keyboard encoding may be standard USASCII or EBCDIC, or special codes as required. Standard data levels are provided. Keytops are available in a variety of sizes, styles, colors and languages. Custom legends supplied on request.

- **2900 Series:** Modular reed switch keyboards. Reeds are replaceable from the back of the circuit board should it ever be necessary. Modules in 1 through 6 stations. Proven to 100,000,000 operations.
- **3200 Series:** Low-cost mechanical switches, dual bifurcated contacts, gold-plated, built-in wiping action.
- **3400 Series:** Modular mechanical switches, single or double contact closure per key position, optional illumination in the keystem.
- **4000 Series:** Low cost/high reliability solid-state keyboards with capacitive coupled switches. Latest breakthrough in keyboard technology. Long life, environmental resistance, and large capacitance change during switching to produce reliable switching.

Maxi provides a **custom** keyboard design service. Using keyboard design kits available from local representatives (see index, back of this catalog for addresses) or direct from the factory, users may specify all keyboard parameters, including types and location of key switches, operating force, type of logic, code, button styles, colors and legends.

SPECIFICATIONS

- **2900 Series** (sold only as part of a keyboard assembly)
  Ht. — 1.54″, including keytop
  Total Travel — .175″, ±.010″
  Operating Life — 100 million (typical load)
- **3200 Series**
  Ht. — 1.59″, including keytop
  Total Travel — .180″, ±.010″
  Operating Life — 20 million (typical load)
- **3400 Series**
  Ht. — 1.59″, including keytop
  Total Travel — .187″, ±.010″
  Operating Life — 20 million (typical load)
- **4000 Series** (sold as complete keyboard only)
  Ht. — 1.45″, including keytop
  Total Travel — .165″, ±.010″

PRODUCT DEVELOPMENT

Maxi engineers are devoted to an on-going program of innovation in keyboard design. For example, Maxi is currently the only major keyboard manufacturer to offer mechanical, reed and solid-state keyboards. New products are continuously introduced to help the company stay abreast of rapidly expanding needs in the information processing industry. Watch for regular product announcements resulting from this developmental commitment.

ENGINEERING/QC

Maxi-Switch engineers have extensive experience in the design and development of custom keyboards for special applications. Their logic and keyswitch designs are subject to rugged life tests, and finished keyboards must pass rigid quality control procedures at several stages of production. Final keyboard checkout insures that each unit performs under load and is thoroughly tested to meet customer specifications.

MANUFACTURING

All Maxi-Switch keyboard and keystrip products are manufactured in a new and modern facility in suburban Minneapolis. In-house capabilities include keyboard design and layout, automatic soldering, keyswitch molding, metal stamping and automated assembly. Skilled technicians man the production assembly lines, using only the best in components and materials.

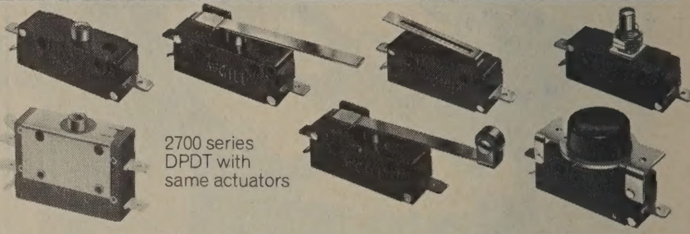
think quality specify McGill switches

snap-action

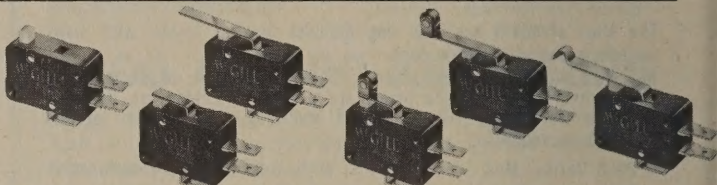
High reliability through design simplicity. Fewer parts to wear—minimum spring flexing increases life. No coil springs. Less than .005″ differential travel. SPDT, SPST. **2600 Series**—20 A, 125-250 V AC; 1 HP 125 V AC; 2 HP 250 V AC; 50/60 Hz. **2650 Series**—25 A 125-250 V AC; 1½ HP 125 V AC; 2 HP 250 V AC. Operating force: 20 oz. max. **1600 Series**—Light operating force—10 oz. max. 15 A 125-250 V AC; ¾ HP 125 V AC; 1½ HP 250 V AC. Also available as **2700 Series** in DPDT models with same actuators and rated: 20 A, 125-250 V AC, 2 HP 250 V AC, 50/60 Hz. U.L. Listed. C.S.A. Approved.



2700 series
DPDT with
same actuators

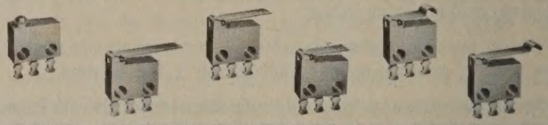
miniature snap-action

1$\frac{3}{32}$″ x ⅝″ x $\frac{13}{32}$″ case. Oversize silver contacts. Excellent wiping action and low contact bounce. SPDT, SPST. **4600 Series**—6—14 oz. max. operating force. 15A, ½ HP 125-250 V AC; ½ A 125 V DC, ¼ A 250 V DC; 4 A "L" 125 V AC. **4700 Series**—Light operating force—8 oz. and 75 gram max. 10 A, ⅓ HP, 125-250 V AC; 4 A "L" 125 V AC. U.L. Listed. C.S.A. Approved. **4613 Series** meets requirements for TV fire protection.



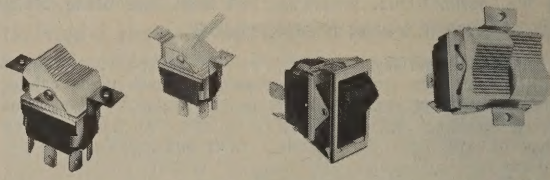
sub-miniature snap-action

4900 Series—smallest precision snap-action switches available. Case dimensions less than .250″ x .300″ x .100″. Choice of contacts, terminals and actuators. SPDT. 2 A 125-250 V AC; 2 A (Res.) 30 V DC; 1 A (Ind.) 30 V DC. Meet MIL-S-8805 specifications. Temp. range —100° F to +185° F. Up to 250° F continuous duty temp. ratings available.



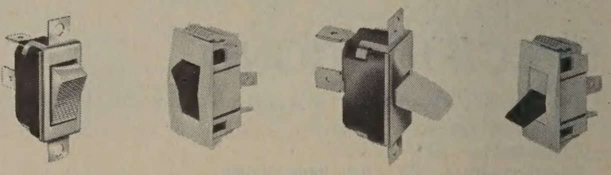
rocker and paddle

Your choice of actuator color, style. Proven reliable detent mechanism. Snap-in mounting optional. Variety of SP and DP, 3-pole, 4-pole and 2-circuit models. **0801 SP and 0811 DP Series** — 20 A 277 V AC; 1½ HP 125-250 V AC. **1801 SP and 1811 DP Series**—6 A 125 V AC; 3 A 250 V AC; ¼ HP 125-250 V AC. **0840 3-pole and 4-pole series** — 17 A 277 V AC; 6 A 600 V AC; 1 HP 125 V AC; 2 HP 250-480-600 V AC; 1, 2 or 3 phase. U.L. Listed. C.S.A. Approved.



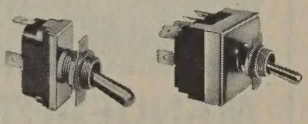
miniature rocker and paddle

High rating reliability. Choice of standard or specially styled actuators terminals, circuitry to meet your needs. Optional snap-in mounting. **0805 Series**—12 A 125 V AC; 6 A 250 V AC; ½ HP 125-250 V AC and 15 A 125-277 V AC, ¾ HP 125-250 V AC. **1805 Series** 8 A 128 V AC; 4 A 250 V AC; ⅓ HP 125-250 V AC. Also available with 6 A "L" 125-250 V AC rating. **0806 Series**—features neon indicator light. Same ratings as 12 A 0805 series switches. U.L. Listed. C.S.A. Approved.



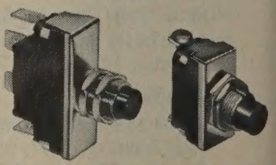
toggle

Reliable proven positive detent mechanisms. Wide variety of circuitry in 6 A to 20 A ratings. SP, DP, 3-pole and 4-pole models. Choice of spade, screw or solder terminals. U.L. Listed.



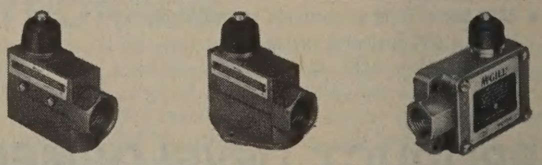
push button

Momentary and maintained contact push-button switches up to 30 A. Variety of mechanisms, including snap-action, SPST, SPDT, 2-circuit. U.L. Listed.



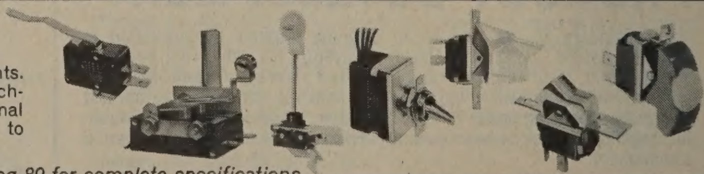
precision metal-cased

Applicable for limit, safety and automatic control uses. In die-cast housings with variety of direct action and adjustable level actuators. **1502 Series** 20 A, 125-250, 480 V AC, ½ A 125 V DC, ¼ A 250 V DC. **1503 Series** same rating with added 10 A, 125 V AC Lamp Load and 1 HP 125 V AC, 2 HP 250 V AC. U.L. Listed.



specially-engineered

Modifications of basic switches to meet application requirements. Special actuator designs and colors, mounting hardware and attachments to provide more design latitude, style-appeal and functional reliability. Complete application engineering abilities and facilities to develop the best answer to your special switch problems.



Request Catalog 89 for complete specifications.

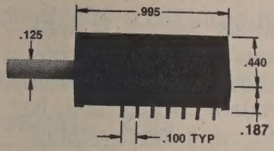
DAVEN ROTARY SWITCHES

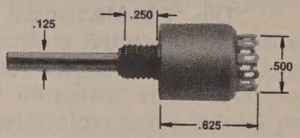
Dipswitch



SPECIFICATIONS

Switching Capacity 1/8 amp.
Up to 3 Non-shorting closures per position.
Up to 5 Shorting closures per position.
Six Positions Max. 60°
Contact Resistance .050 ohms max.
Dielectric 500 VAC
Insulation 10,000 Megohms
External Stop option
(Up to 30 ounce inches)

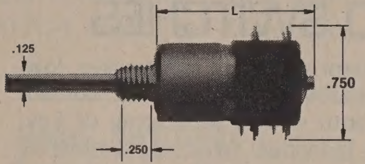
G/K Series



SPECIFICATIONS

Switching Capacity 1 amp.
1 pole, 12 position to
4 pole, 3 position
Shorting or Non-shorting
Indexing—30°, 36°, 45°, 60°
QPL per MIL-S-3786/20E
Explosion Levels "E" + "F"
Dielectric 1000 VRMS
Insulation 50,000 Megohms
Contact Resistance—.020 ohms max.
P/C and Solder Terminals
Mounting Hardware Supplied

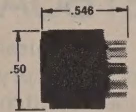
S Series



SPECIFICATIONS

Switching Capacity ½ amp.
Up to six decks from 1 pole 20 positions to 8 pole 2 positions
Indexing—18°, 22½°, 30°, 36°, 45°, 60°..
BCD 1 thru 6
BCO 1 thru 3
Dielectric 500 VRMS
Insulation 50,000 Megohms
Stop Strength 80 ounce inches
"L" from .812 to 3.0 inches

P Series



SPECIFICATIONS

Switching Capacity ½ amp.
1 pole, 10 position
2 pole, 5 position
Indexing 36°
Shorting & non-shorting
Screw driver operated
Printed Circuit Terminals
Dielectric 1000 VRMS
Insulation 50,000 Megohms
Stop strength 24 inch ounces.
Contact Resistance .030 ohms max.

KEYBOARD SWITCHES

Mechanical Enterprises offers inexpensive, low-bounce mercury contact and mechanical contact keyboard switches, both with a wide array of keytops. In addition to individual switches, completely assembled small keyboards for OEM in standardized configurations are available to save on engineering and layout charges.

The T-5 Mechanical Contact Switch is well suited to protected environments where open contacts can be used and where low cost is a prime requisite. The Mercutron Keyboard Switch, M-5, is an ideal low-cost replacement for solid-state switches and perfect for environments unsuitable for most other types of switches.

COMMON FEATURES OF M-5 AND T-5 SWITCHES

Plunger styles available are: the blade and cruciform stems for doubleshot keytops producing a flat or sloped keyboard; the slanted stem for a doubleshot keytop producing a stepped keyboard; the pushbutton style for use with a legend plate; and two plungers designed specifically to accept lenses for lighted switches.

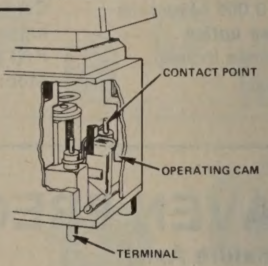
The lighted version of switches accept bi-pin style T-1 incandescent lamps. These switches are easily relamped from the front panel. Each lens contains a plastic film light diffuser which may be lettered by printing or transfer type lettering.

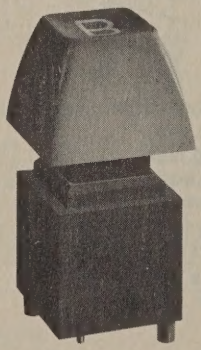
All switches are also available with alternate switching action: push on/push off.

SERIES T-5 . . . with gold-plated mechanical contacts

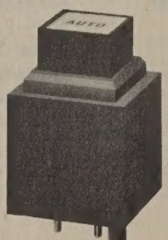
These Keyboard Switches have low-bounce mechanical contacts with a rated life of 20 x 10^6 operations.

Switching action is accomplished by movement of one gold-plated bar against another at right angles (classic cross bar switching) at a velocity determined only by spring forces. This design provides a much more constant and lower contact bounce than is found in conventional mechanical contact switches.

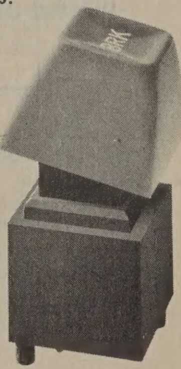




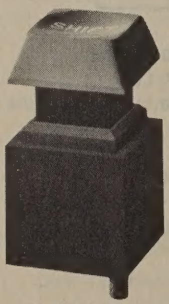
T & M-5C



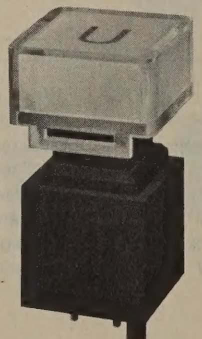
T & M-5H



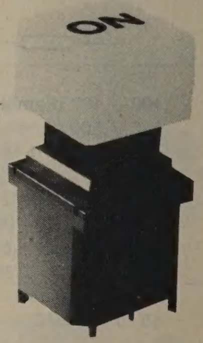
T & M-5S



T & M-5B



T & M-5L

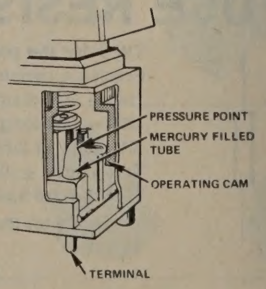


T & M-5K

SERIES M-5 . . . with flexible tube mercury contacts

Mercutron Keyboard Switches provide a low-bounce switching closure with sealed contacts. Unit prices are competitive with reed switches.

Switching is accomplished by breaking a mercury core inside a flexible tube by slight pressure on the outside of the tube. The mercury switching element terminates in pins which protrude through the switch body for soldering into the printed circuit board. The M-5 is unaffected by attitude: it will operate in any position, as well as under acceleration forces.



KEYBOARD ASSEMBLIES 10, 12 and 16 Positions

A variety of small keyboards made from T-5 and M-5 Keyswitches are available as standard units. Both encoded and non-encoded versions on 3/4 and 5/8 inch centers with a selection of keytop styles provide for numerous keyed inputs. Keyboards are made for behind-panel mounting with attractive keytop arrays projecting through single or multiple openings. Contact us for details on standard configurations.

MICRO SWITCH

TABLE OF CONTENTS

The products described in the following pages are representative of the thousands of position sensing and manual control products manufactured and distributed worldwide by MICRO SWITCH. For comprehensive catalogs write MICRO SWITCH, Freeport, Illinois 61032, Dept. 720E. Or, call (815) 235-6600. For application assistance, contact a nearby MICRO SWITCH Branch Office. See listing in this Directory. For off-the-shelf products, see your local MICRO SWITCH Authorized Distributor.

MANUALLY OPERATED SWITCHES

PUSHBUTTONS

AML p. 4160

Wide choice of visual display with power, electronic or solid state switching. Single level termination with all common types. Choice of snap in front mount or strip and matrix mount.

Series 4 p. 4165

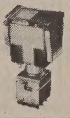
Snap in front mount with easy wiring for low installed cost. Single section. Electrical ratings from 10 amps to gold contacts to solid state switching.

Series 3 p. 4168

Matrix, individual or strip mount. 1 or 2 section. 5 amp rating. Various button styles and visual display.

Series 2 p. 4171

Individual or strip, snap in mount. 1 to 4 section buttons for many display possibilities. Widest choice of switch modules, plus coil operation.



SN/SD p. 4175

Hall effect, solid state switching. Wide selection of buttons and legends. Snap in or P.C. board mount in standard or low profile modules.

Unlighted Pushbuttons p. 4176

Bushing mounted. Wide choice of circuitry or ratings.

TOGGLE SWITCHES

Series 8 p. 4177

Complete miniature manual line. 6 amp rating. 1 to 4 poles. Variety of actuators, contacts and termination. Use where low cost and small size are critical requirements.

Type TS p. 4179

Standard size toggles, 1 or 2 pole. Various actions, circuitry and termination. Use where a lower cost standard size toggle is required.

Type TL-TP p. 4180

Sealed toggle and rocker toggle series. Standard size. 1, 2 and 4 poles. Various actuators, termination, and circuitry. Has both mil. listings and UL listings.

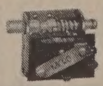
Type AT p. 4182

Toggle switch assemblies using basic switches. Wide variety of ratings, contacts, actuators, terminals, and sealing. Mil. listings available.

SPECIAL PURPOSE

Type AC p. 4184

Door interlock switches for use in hazardous electronic equipment. Variety of precision snap-acting switches.



POSITION SENSING SWITCHES

BASIC SWITCHES

Type SX p. 4185

Smallest snap-action switches from MICRO SWITCH. Rated to 7 amperes. Choice of actuators and terminal styles. Use where the smallest and least weight, snap acting switch is essential.

Type SM p. 4186

Slightly larger than SX switches. Rated to 11 amperes. Choice of contacts, actuators and terminal styles. Use for communications/office equipment and other smaller application needs.

Type V3 p. 4187
Type XL p. 4188

Standard or low operating forces. Rated to 15 amperes. Use for appliance-vending machine and similar applications. XL Solid state Hall effect integrated circuit in a V3 package.

Type Z & A p. 4189

Standard size switches. Ratings to 25 amps. High precision — long life. Wide choice of actuators and terminals. Use for general purpose applications.

Type SE/XE p. 4192

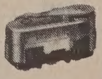
Sealed, environment-proof switches. Rated to 7 amperes. Choice of auxiliary actuators and terminal styles. Use where a sealed SM or a sealed SX is needed. Mil. listings.

Type HM p. 4193

Hermetically-sealed switches. Rated 5 amperes, 28 VDC and 125 VAC, 400 hertz. High temperature version to 500°F (260°C). The ultimate in sealing, plus small size. Mil. listings.

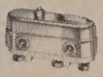
Type HS p. 4194

Hermetically sealed switch. Rated to 25 amperes, 28 VDC. High temperature version to 300°F (149°C). Choice of integral levers and terminals. Standard size switch with the best seal. Mil. listings.



Type HT p. 4194

High temperature switch (up to +1000°F 538°C). Side and panel mount. Rated 3 amperes 125 VAC. Use for oven/furnace applications.



Mercury Switch p. 4195

Low cost hermetically-sealed switches. Easy installation and low force operation. Tilt (position-sensitive) switches are actuated by the normal movements of machine parts.

SOLID STATE NO TOUCH SENSORS

103SR/400SR p. 4196

Magnetically operated Hall effect sensors. May be directly interfaced with most electronic circuits.

XK p. 4196

Eddy current, ferromagnetic operated sensor. Rugged plastic package and direct interface with logic devices.

AV p. 4197

Vane operated Hall effect sensor. 0 to 100 KHz, speed of operation.

FW p. 4197

Choice of ferromagnetic or all metals sensing proximity switches. Protected from RFI effects. Environment sealed. Direct interface with logic devices.

MICRO SWITCH

A DIVISION OF HONEYWELL
FREEPORT, ILLINOIS 61032 / PHONE (815) 235-6600

AML ADVANCED MANUAL LINE

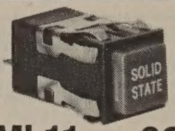
MICRO SWITCH AML (Advanced Manual Line) presents a new dimension in lighted pushbutton and indicator control. Designed by industrial designers for industrial designers, AML was developed with appearance and human factors in mind. The coordinated button height, bezel size, and the compatibility of the square and rectangular shapes combine to "harmonize" your panel.

Displays range from split-screen and hidden-color to a unique three-segment lens cap indicator — all with transmitted, projected, or dead front illumination. And a choice of lamps, including a T-1¾ wedge base lamp, neon and LED's.

Solid state pushbuttons operate at 5 V or 6-16 V with a built-in regulator, sink (TTL or CMOS) and source; electronic control from logic level switching to 3 amperes, 125 VAC; and power control up to 10 amperes at 250 VAC.

AML devices have the same shallow behind-panel depth and single level termination. They can either be snapped in place from the front, or subpanel mounted using individual strip or matrix mounting hardware.

AML is designed to comply with IEC, CEE24, UL and CSA standards.



SOLID STATE PUSHBUTTON SWITCHES . . . AML10 SERIES

These switches utilize the proven MICRO SWITCH Hall effect integrated circuit to control transistor and logic level circuitry.

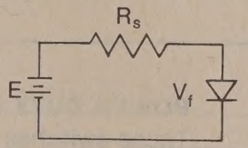
APPLICATION INFORMATION

AML12, 22 and 42 pushbuttons and indicators constructed for voltage levels of 5, 10, and 15 VDC are provided with internal resistors to control LED current to a nominal 20 mA. For those devices without internal current limiting resistors, suitable external control of the LED current must be provided. It is recommended that a minimum of 5 VDC open circuit voltage with an appropriate series resistance be used to drive LED devices. This minimizes the effect of temperature (current variation) on forward voltage of the LED. Refer to equations at right.



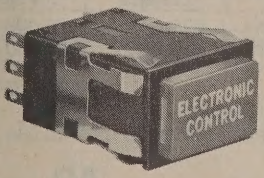
$$R_s = \frac{E - V_f}{I_f}$$

WHERE: R_s = Series Resistance
E = Supply Voltage
V_f = Forward Voltage of LED
I_f = Circuit Current

If a diode is added in series for reverse polarity protection then:

$$R_s = \frac{E - V_f - V_{PD}}{I_f}$$

WHERE: V_{PD} = Forward Voltage of Protection Diode



ELECTRONIC DUTY PUSHBUTTON SWITCHES . . . AML20 SERIES

These switches provide versatile switching capabilities from logic level switching to 3 amperes, 125 VAC.

SERIES 4 LIGHTED PUSHBUTTON SWITCHES/INDICATORS

- Choice of Solid State or Precision Snap-Action Switching
- Low Installed Cost
- Front of Panel Mounting and Relamping — Without Tools
- Distinctive Lighted Display Colors
- Attractive Housings with Barriers or Full Bezels

Series 4 provides an attractive panel display and switching versatility at a low installed cost to help you stretch your panel budget. Units can be furnished assembled, with lamp, ready to snap-in the panel. There is a choice of solder/quick-connect terminals or printed circuit board terminals.

See Catalog 200 for additional information and listings.

BUTTONS

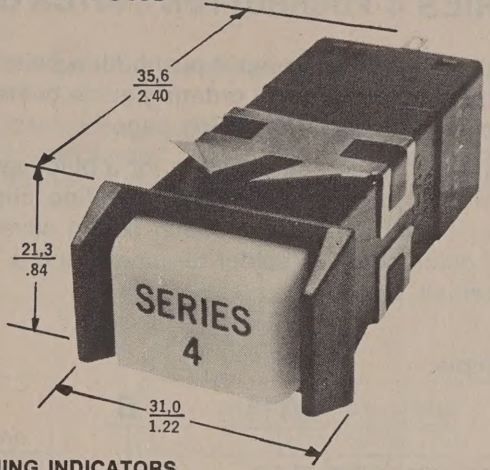
Vivid color buttons provide attractive, clearly visible lighted display with: (1) transmitted color — display color can be distinguished whether the lamp is ON or OFF; (2) projected color — button is white with the lamp OFF and colored when illuminated; and (3) hidden legend/hidden color — button appears black with the lamp off, and legend and color appear when illuminated.

LAMPS

The Series 4 lamp remains stationary during button operation, minimizing filament breakage due to a moving lamp. There is a choice of T-3¼ wedge-base lamps (6, 12 and 28 V) or T-2 telephone slide-base lamps (120 V).

HOUSINGS

Housings for switches and indicators are identical in appearance, but the indicator housings have no provision for switching. They may be snap-in mounted on panels up to .20″ (10,2mm) thick. Housings are available in full bezel or barrier styles, momentary or alternate action switching, and contain the lamp socket and termination means.

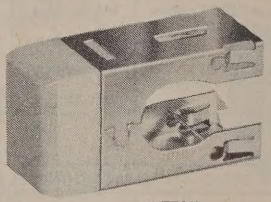


MATCHING INDICATORS

The indicators are identical externally to the Series 4 lighted switches for a harmonious panel appearance. See Catalog 200 for ordering.

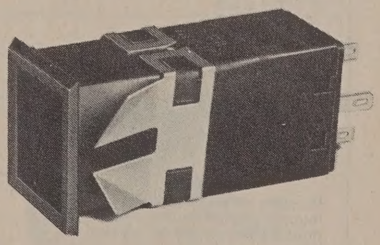
LOCKED BUTTON OPTION

Series 4 can be furnished with a locked button option for use in areas accessible to the public, where tampering and vandalism are problems. The housing has a special mounting clip with built-in button retainer. This mounting clip must be removed from behind panel to allow button removal. Button movement during switch operation is unaffected by the locked button feature. (These units cannot be relamped from front of panel.)



BUTTON

LAMP

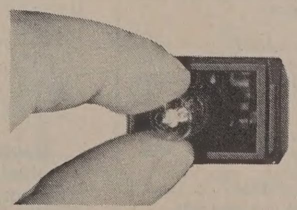


HOUSING

CONVENIENT PANEL FRONT MOUNTING AND RELAMPING

1. Snap-in mounting. Switch or indicator is easily inserted into the cutout. Mounting clips grip the panel. No tools are needed.

2. Lamps and legends can be changed from panel front. When button is removed, lamp is extracted from its socket and retained in button.



3. Ease of lamp replacement. After the inoperative lamp is automatically removed with the button, the new lamp is inserted without the use of tools.

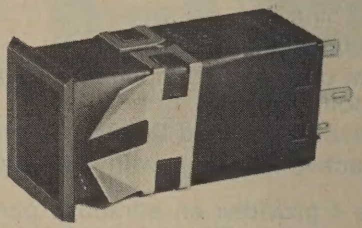
DIMENSIONS SHOWN ARE FOR REFERENCE ONLY

Key: 0,0 — mm / 0.00 — inches

SERIES 4 PUSHBUTTON SWITCH ORDERING GUIDE

Catalog listings for Series 4 pushbutton switch housings may be derived from the ordering guide below. To order buttons, refer to the following page.

4A11BAA11 is a catalog listing for a black switch housing with a bezel on all sides, mounting clips on long sides, 1-pole momentary action 5-amp silver contacts, .110″ quick-connect/solder terminals, and a T-3¼ lamp socket. UL listed.



Example:

4A11 **B** **AA** **11**

Current Sourcing, Regulated 6-16 Volts	Momentary only	SB	SD
Current Sinking, 5 Volts	Momentary only	SS	

ILLUMINATION	
11	No lamp, has lamp socket for T-3¼ wedge base lamps
41*	No lamp, has lamp socket for T-2 telephone slide-base No. 5 lamps
91	Unlighted, no lamp socket

* If the locked button option is specified in the Housing Style code, the unit will have a UL Listing of 120 volts max., lamp.

Mounting clips on the long sides of the housing are specified when individually mounted or when the long sides of strip mounted housings parallel the long sides of the panel cutout slot. The most secure mounting is achieved when the mounting clips are on the long sides.

Mounting clips on the short sides of the housing are specified when short sides of strip mounted housings parallel the long sides of the panel cutout slot.

SERIES 4 BUTTON ORDERING GUIDE

Buttons may be furnished with or without the metal shell, assembled or unassembled. When type B, C, D, E, or F buttons are ordered unassembled, the insert is also unassembled.

Catalog listings for Series 4 buttons are derived from the ordering guide, as shown in the example, below.

4B1AGN is a catalog listing for a green (transmitted color) unlegended button. (If the button shell is also desired, substitute 4B2 for 4B1 in the listing.)

Example:

4B1 A G N

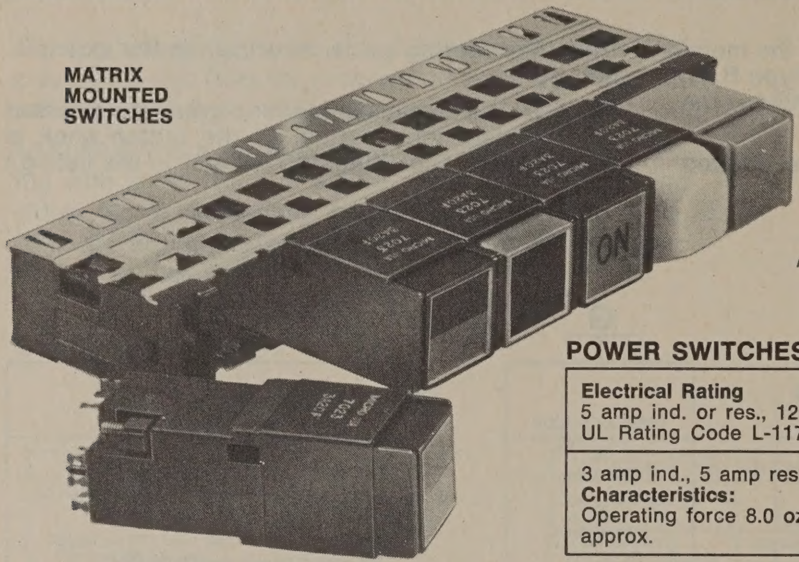
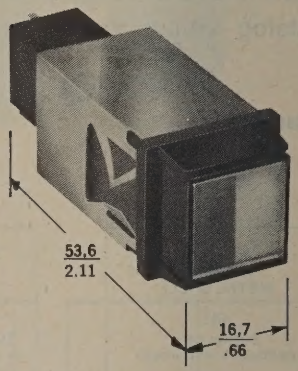
SERIES 3 LIGHTED PUSHBUTTON SWITCHES





POWER SWITCHES

Electrical Rating
5 amp ind. or res., 125 VAC
UL Rating Code L-117

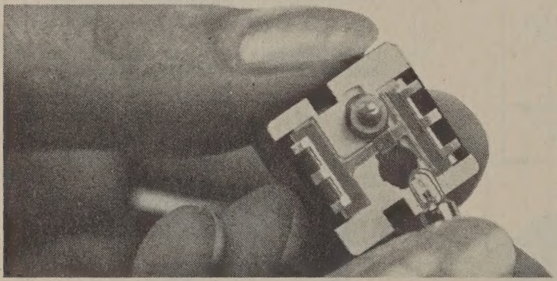
3 amp ind., 5 amp res., 28 VDC
Characteristics:
Operating force 8.0 oz. (2,22 N.) approx.

Series 3 has multiple options in the same size package. By standardizing on Series 3 as building blocks for your control panels, you can specify either matrix, individual, or strip mounting, momentary and two-level alternate-action, power or reed switches (with audible "click click" feedback), and matching lighted indicators.

Matrix mounted switches are provided with termination suitable for direct wiring, printed circuit board mounting or plug-in termination to customer pre-wired connector blocks. They can be replaced from the panel front by simply using a screw driver to disengage the switch mounting lugs from the mounting rails.

Individual mount switches have spring clips on two sides for front of panel snap-in mounting.

BUTTONS



Lamps and legends can be changed from the panel front. The button is removed by pulling it forward out of the switch housing. Lamps are retained in the button for ease of replacement.

Relegendable buttons have a transparent colorless insert which fits over a colored diffuser plate and snaps into the button's shell. Legending may be applied to the diffuser plate. The diffuser plate can be easily removed and replaced if a change of legend information is desired. To ensure proper orientation during assembly, the button is keyed to the switch housing. Lighted display is provided by one or two 5, 12, 14 or 28 volt T-1 lamps.

LEGENDING

MICRO SWITCH will furnish hot stamp legending in standard modified Gothic. Contact our local branch office for Series 3 legend order sheets that provide data on type size and possible number of characters per line.

INDICATORS

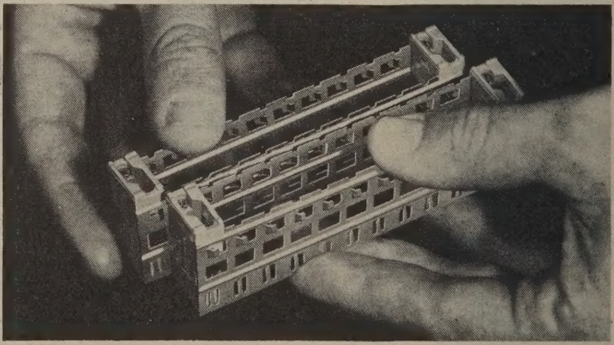
Lighted indicators are identical in size and appearance to the switches, but without provision for switching. See Catalog 200 for ordering.

MOUNTING

Mounting options for Series 3 switches and indicators are:

1. Individual mount units have integral clips on two sides of the housing for front of panel snap-in mounting. They can be mounted in separate cutouts or strip mounted in a single cutout.

2. Units that require Type 3M mounting hardware are mounted in a single cutout. Two or more rows can be attached together to form a matrix or a single row can be strip mounted.



TERMINATION-SWITCHES AND INDICATORS

Direct wiring to switch, plug-in to connector blocks, or printed circuit board termination. Available on either switch or connector.

NOTE: Caution should be exercised when soldering to direct wire terminations to prevent overheating and flux contamination of the switch contacts.

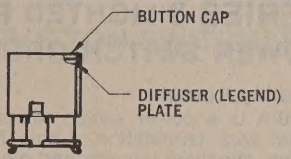
SERIES 3 LIGHTED PUSHBUTTON SWITCHES BUTTON ORDERING GUIDES



THREE-PIECE RELEGENDABLE BUTTONS

(Cap, Diffuser/Legend Plate, and Lampholder), Flat Style Single-Section or Two Section Display

Note: If lamps are not desired, omit the Lamp Code number from the catalog listing.

3D11WW1L-1 is a relegendable flat button, has a single section display, black button shell, white display color, transparent colorless cap, legend, and one 5-volt lamp. For use with switches only.

Example:

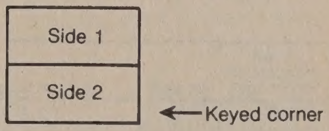
CONSTRUCTION	SHELL COLOR	DISPLAY COLOR*	CAP COLOR	LEGEND	LAMPS
3D1	1	WW	1	L	1
3D1 Single-section display 3D2 Two-section display	1 Black 2 Gray	W white R red G green B blue Y yellow D orange K black	1 transparent colorless 2 Transparent black, hidden color 3 Projected color, translucent white	Switch Buttons: L with legend N w/o legend Indicator Buttons:** M with legend P w/o legend	1 one 5 volt 2 two 5 volt 3 one 28 volt 4 two 28 volt 5 one 12 volt 6 two 12 volt 7 one 14 volt 8 two 14 volt (Omit character if no lamp desired.)

*For single-section buttons, enter a double letter at this position in the Catalog Listing. Example: Red — RR

**Note: Only "indicator style" buttons should be used in indicators, as indicated by the M or P Legend Code letters.

When ordering two-section buttons, add the letter for Side 1 first. Example: If you desire Side 1 to be Red and Side 2 Blue, enter RB.

View from top of two-section button



ONE-PIECE NON-RELEGENDABLE BUTTONS

Flat Style or Truncated Style Single-Section Display

Note: If lamps are not desired, omit the lamp Code number from the catalog listing.

3D4RM2 is a non-relegendable truncated button, has single section display, red button color, legend, and two 5-volt lamps. For use with indicators only.

CONSTRUCTION	DISPLAY COLOR	LEGEND	LAMPS
3D4	R	M	2

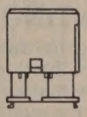
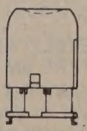
Flat Style



Truncated Style



All 3D4 type buttons will be engraved legending. Hidden color and hidden legending available on request. Contact your nearest MICRO SWITCH Branch Office.

** Note: Only "indicator style" buttons should be used in indicators as indicated by the M or P Legend Code.

SERIES 3 LIGHTED PUSHBUTTON SWITCHES
POWER SWITCH ORDERING GUIDE

Ordering Example
3A10-A is a power switch for matrix or strip mounting, has direct wire termination, 1-pole Form Z circuitry, momentary action, two lamp circuits, and black housing.

THRU-PLUNGER SWITCHES
Switches with Electrical Codes 16, 17, 66, and 67, have thru-plungers which attach to mechanical interlock devices to provide bailing and lockout functions.

Example: 3A 10 A

POWER SWITCH MOUNTING TYPE

3A
For matrix or strip mounting. Requires use of 3M type mounting hardware.

3G
For individual or strip mounting. No additional mounting hardware required.

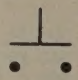
Color Code	DESCRIPTION	
	Housing (bezel*)	Barrier
A	Black	None
F	Black	Black

* Bezel provided with 3G and 3F only.

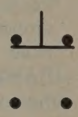
Circuitry:

X=SPST—N.O. Double Make



Y=SPST—N.C. Double Break

Z=SPDT— Double-make Double-Break Break-before-Make



ADD—1 to listing if connector block is required (3A modules only).

(Connector blocks have direct wire terminations only.)

Reed switch units are also available. See Catalog 200.

MOUNTING HARDWARE

Mounting hardware for 3A units is provided by a box girder structure. Interlocking tabs enable them to be assembled into a multi-row matrix. To specify the row length in the catalog listing, add the number of switches and/or indicators, then convert the total to the proper suffix number, i.e. "09" for a 5-unit row. proper suffix number, i.e. "09" for a 5-unit row.

Each 3M Type listing consists of two mounting bars and two mounting blocks in packet form.

COMPLETELY ASSEMBLED STRIPS OR MATRICES USING TYPE 3M MOUNTING HARDWARE

MICRO SWITCH will provide completely assembled strips or matrices at an additional charge per station of first level devices (switches) with no set-up charge. Contact your MICRO SWITCH Branch Office for pricing of assembled strips or matrices.

Example: 3M1 — 09

MOUNTING HARDWARE BASE LISTING

	4 (A, B, C, & D)	2C39	2C239

INDICATOR HOUSING MODULES

Indicators match their respective operator-indicator counterparts in panel appearance, but have no provision for attaching switch units. They utilize the same barriers for panel mounting.

MOUNTING BARRIERS

Molded color barriers are available in two panel thickness ranges (.19″ panels require the .06″ to .19″ type). For strip-mounted units, specify one more barrier than the number of units in the group.

HOLD-IN COIL ELECTRICAL DATA

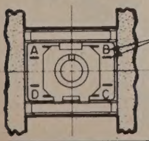
(also available in Flange mount)

Hold-in coil equipped operator-indicator housings enable electromagnetic maintained and released contact. When energized, the coil holds the device in the operated condition, after the screen has been manually depressed.

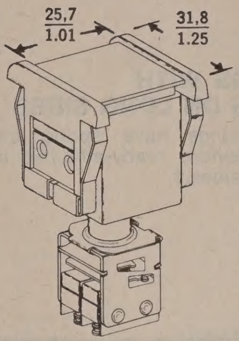
Approximate coil power ratings are 1.3 watts, 6 vdc coil and 1.7 watts, 28 or 48 vdc coil.

ELECTRICAL BAIL

The circuit at right shows a means of operating any number of hold-in coil units, one-by-one, in situations that require only one switch to be operated at a time. A cancel switch can be installed at either or both points "A" and "B" to perform clearing of all switches.



LAMP TERMINAL DESIGNATION, 2 TERMINALS FOR EACH LAMP, PLATED FOR SOLDERING



LONG BARRIER MOUNT

These housings are assembled to panels with mounting barriers attached to the longer sides.*

	4 (A, B, C, & D)	2F12	2F212

PULL-IN COIL ELECTRICAL DATA

(available in Flange mount only)

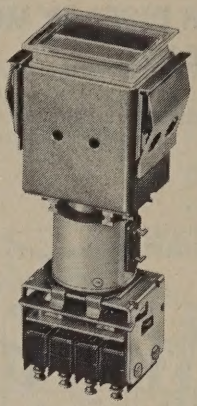
Pull-in coil equipped operator-indicators enable electromagnetic actuated, maintained and released contacts. Energizing the coil pulls in the operating plunger, causing circuit transfer in the switching unit. A 28 vdc, 2.2 amps. (approx.) is required during actuation (for about 20 ms. or less) and only .11 amp. (approx.) during hold-in. (Recommended for operation at 85 to 100% of rated voltage.)

Switch units that can be used are "TB", "PL" and all "SM" types except low force and 4-pole alternate-action designs. Maximum ambient temperature limits are 120°F (48.9°C) (1 or 2 pole momentary-action), 110°F (48.9°C) (3-pole momentary-action), 100°F (37.8°C) (4-pole momentary-action) and 90°F (32.2°C) (all alternate-action or momentary/alternate-action) switch units.

Note: A 4-pole momentary switch such as a 2D9 requires 28 volts for proper actuation.

ELECTRICAL BAIL

The circuit at right shows how any number of Catalog Listings 2D162 can be operated in one-by-one sequence. Each actuation releases previously actuated switch. Power is required only during the reset pulse. (Reset can also be accomplished by depressing previously actuated screen.)



HOUSINGS WITH FLANGES ON SHORT SIDES

These housings have spring mounting clips ready-attached to the shorter sides.‡

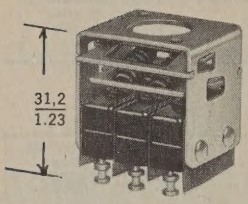
FREEPORT, ILLINOIS 61032 / PHONE (815) 235-6600

SERIES 2 SWITCH MODULES

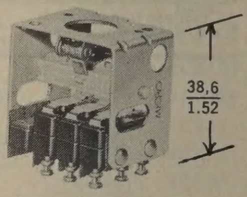
Interchangeable type 2D switch modules attach to spring clips on the bottom of operator-indicator housings. Dependable performance at power or low energy loads is assured by MICRO SWITCH time-proven snap-action basic switches. Options include momentary action (push-on release-off), alternate-action (push-on push-off); 1, 2, or 4-pole double-throw and twin-break circuitry; and solder, screw or quick-connect terminals.

"SM" SUBMINIATURE (MULTI-SPDT) SWITCH MODULES



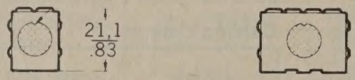
MOMENTARY ACTION

"SM" switch modules are available with momentary-action in a choice of two styles, one having a pronounced touch-feedback, while the other has a low force for rapid operation; alternate-action; and a combination momentary/alternate-action. Extra length turret type terminals are solder plated.



ALTERNATE ACTION

KEYING TAB FOR ORIENTATION OF SWITCH UNITS WITH OPERATOR-INDICATOR UNITS



NOTE — 'T2' TERMINALS ARE PLATED FOR SOLDERING

SN SOLID STATE PUSHBUTTON SWITCHES

SWITCHING CONCEPT

The Hall effect solid state concept is one of the most reliable switching elements ever designed. An integrated circuit, actuated by magnets, produces an analog control voltage. This voltage is converted into a digital output with a trigger circuit. Two isolated outputs are available from each switch module which may be used individually or wired in parallel. Level and pulsed outputs are available.

The 11SN Series switches are made for direct panel mounting with snap-in hardware and the 101SN Series, 201SN Series and 301SN Series mount direct to printed circuit boards without additional mounting or support hardware. Lighted modules are available in both the 11SN Series and the 201SN Series.

SN BUTTONS

The SN Series is ideal for building custom arrays. There are thousands of legends tooled and we have the in-house capability to tool any special legend you may require. Multiple-unit buttons and space bars with complete mounting hardware are available. In fact, MICRO SWITCH has the largest selection of button shapes, sizes, and colors in the industry.

SD SOLID STATE MODULES

BUILD YOUR OWN LOW PROFILE KEYBOARD

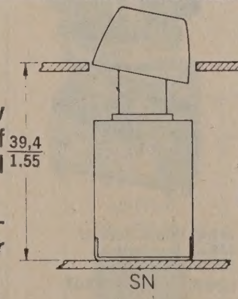
The MICRO SWITCH Series SD module is a low profile solid state keyboard module. The heart of the SD module is the proven MICRO SWITCH Hall Effect integrated circuit.

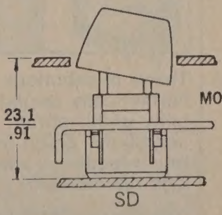
The SD module is directly compatible with all common logic families with no special buffering or electronic circuitry needed.

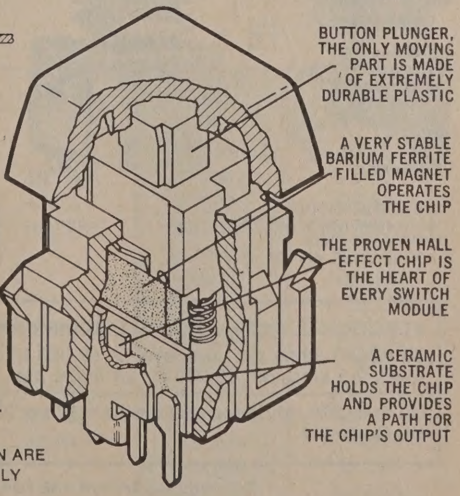
Buttons are available in a wide variety of sizes, shapes, and colors.

SD modules are available with:

- Level or pulsed outputs
- Sourcing or sinking outputs
- Momentary or alternate action
- Scanning interface
- LED Lighting
- Stepped or sloped buttons







BUTTON PLUNGER, THE ONLY MOVING PART IS MADE OF EXTREMELY DURABLE PLASTIC
A VERY STABLE BARIUM FERRITE FILLED MAGNET OPERATES THE CHIP
THE PROVEN HALL EFFECT CHIP IS THE HEART OF EVERY SWITCH MODULE
A CERAMIC SUBSTRATE HOLDS THE CHIP AND PROVIDES A PATH FOR THE CHIP'S OUTPUT

MOMENTARY-ACTION

SEALED AT BUSHING, BUTTON, PANEL AND SWITCH UNITS

Catalog Listing **2PB901-T2** meets the submergence requirements of MIL-STD-108D (up to 10 p.s.i. water pressure for one hour). It is sealed facenut-to-panel, button-to-facenut, and bushing-to-facenut (prevents entry of water from back of panel, up and over bushing wall). The two SPDT switch units are potted in a corrosion-resistant metal enclosure.

The knurled facenut is chrome finished to provide an attractive panel appearance with the black button.

WITH BUTTON AND PANEL SEALS

This two-piece design assembly enables the pushbutton to be separated from the switch unit and mounted in the panel. The switch unit is then easily wired and snapped into place from behind the panel. There is an elastomer seal bonded between the plunger and button collar and an "O" ring seals the button assembly to the panel front.

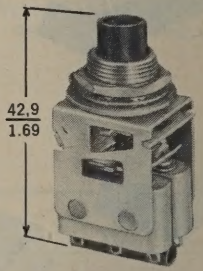
HERMETICALLY SEALED SWITCH UNITS

2-POLE MOMENTARY-ACTION



Hermetic Seal

Sealing consists of metal-to-metal fusion around the cover, actuator, base and mounting holes of each switching unit. The terminals are joined to the housing by glass-to-metal seals. The vapor-proof container permits use in damp locations without danger of condensation on the contacts, as well as providing protection from external contaminants. All external parts are corrosion resistant and meet MIL-S-6743 specifications. This design also meets explosion-proof requirements of MIL-E-5272.

Electrical Rating: 3 amps, ind., 5 amps res., 28 VDC and 115 VAC 400 cps.

These pushbuttons are equipped with MICRO SWITCH "HM" hermetically sealed switch units which provide electrical stability under abrupt changes in atmosphere and environmental conditions. Good feel of the switching action is provided by a touch-feedback which is transmitted through the button when it is operated.

See Catalog 200 for additional information and listings.

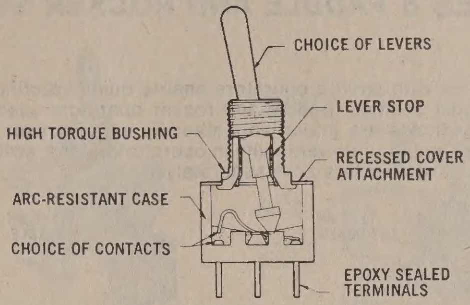
SERIES 8 MINIATURE MANUAL SWITCHES

The MICRO SWITCH Series 8 line of miniature manual switches is ideally suited for commercial applications which have limited space requirements and demand high quality and performance standards.

All switches have silver contacts and solder terminals unless otherwise noted. Many additional circuitry combinations, actuators, terminals variations and contact materials are available. See Catalog 200.

Complete dimension drawings and specifications are shown in Catalog 200.

QUALITY CONSTRUCTION



Electrical Data

Fine Silver Contacts: 6 amps, res.; 2 amps, ind., 125 VAC (60Hz) and 28 VDC. UL Listed (most models): 6 amps, 125 VAC. Gold/Nickel Plated Brass or Fine Silver Contacts: 0.5 VA max. at 20 volts max.

11TS AND 12TS TOGGLE SWITCHES

Series 11TS and 12TS toggle switches are ruggedly constructed for contact protection from dust and moisture. Available with either solder, screw or .250″ width quick connect terminals, this series offers a choice of single-pole, double-throw or double-pole double-throw circuitries. The series is UL and CSA listed.

TL TOGGLE SWITCHES

Type TL toggle switches have environment-proof sealing meeting military specification MIL-S-3950 (Immersion). Operating temperature range from −65° to 71°C (−85° to 160°F). 1, 2 and 4-pole circuitry. Standard and Pull-to-Unlock toggle levers. 2- and 3-position, maintained and momentary toggle action.

For additional information, circuitry and terminal options refer to Catalog 200. For UL Listed versions see Catalog 100 or convert the listings below. Substitute a 5 in place of the 1 before the dash. Example: 1TL1-2 becomes 1TL5-2.

△ Circuitry diagrams are shown under Series TP.
* These positions only are momentary. All others are maintained.
** Toggle lever is blocked from these positions. Toggle becomes two position, with center being one extreme position.
† Also add appropriate suffix letter to the Military Approval number.
‡ See Pull-to-Unlock configurations on the preceding page.

TP ROCKER BUTTON SWITCHES

"TP" rocker button actuated switches combine the advantages of toggle switch circuitry and current carrying capacity with versatile pushbutton manual control and styling. Their internal operating mechanism and case design are identical to the "TL" lever actuated toggle switches. They also offer similar versatility with two button styles, two- and three-position, maintained and momentary operation and 1-, 2- and 4-pole circuitry. "TP" rocker button switches have a temperature range of from —65° to 160°F (—54° to 71°C). Flush panel or above panel mounting. Series TP is UL listed. Catalog 200 supplies additional information, circuitry and button options, and listings.

* These positions only are momentary. All others are maintained.
‡ Refer to TL Electrical Rating Chart.

** Toggle lever is blocked from these positions. Toggle becomes two position with center being one extreme position.

SPECIAL CIRCUITRIES

Catalog Listings with —10, —50, and —70 suffix numbers shown in the TL, TP, and TS Ordering Charts have special "on-on-on" circuits, as illustrated. TL's with —12 suffix are same as —50, except keyway position is maintained; while —72 is same as —50, except that opposite keyway position is momentary.

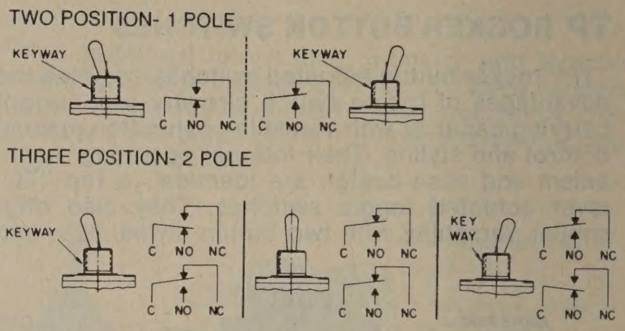
MICRO SWITCH

A DIVISION OF HONEYWELL
FREEPORT, ILLINOIS 61032 / PHONE (815) 235-6600

AT TOGGLE SWITCH ASSEMBLIES

AT Toggle Switch Assemblies couple a toggle switch operator with one or more precision SM, SX, or V3 type basic switches. Momentary and maintained two position and three position devices are available. Schematic at right shows actuation by positions. AT switches offer minimum depth behind panel. Basic switches are UL and CSA listed.



ELECTRICAL RATINGS (BASIC SWITCHES)

For 6AT, 13AT, 23AT, and 22AT Switches

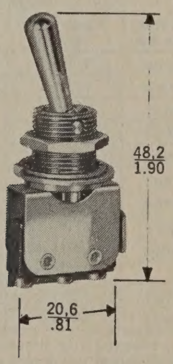
UL Rating Code L4	Rating at 30 VDC		
	Type Load	Amperes at Sea Level	50,000 feet
5 amps, 125-250 VAC	Inductive	3	2.5
	Resistive	5	5
	Max. Inrush	24	24

For High Capacity AT Switches

UL Rating Code L86	Rating at 30 VDC		
	Type Load	Ampere Capacity at Sea Level	50,000 feet
15 Amps, 125-250 VAC ⅓ HP, 125-250 VAC ½ Amp, 125 VDC ¼ Amp, 250 VDC 5 Amps, 125 VAC (L)	Inductive	10	6
	Resistive	10	10
	Motor	6	6

6AT 2-POSITION

Series 6AT Toggle Switch Assemblies control 1, 2, or 3-pole, double-throw precision SM basic switches. Silver contacts in a choice of pierced solder terminals, "T" turret terminals, or "T2" double-turret terminals. Bushing sizes are offered in ¼" or ¹⁵⁄₃₂" as charted below. Gold contact versions for low energy circuits are listed in Catalog 200.



Mounting Style	Number of Poles	Type Contacts	Catalog Listings		
			Solder Terminals	"T" Terminals	"T2" Terminals

	3	Silver	6AT10	6AT10-T	6AT10-T2

* Extra Long Toggle Lever — 1.70mm/.67"

† Momentary position opposite keyway. Key washer in place of key tab.

22AT

Series 22AT Toggle Switch Assemblies contain 8 SPDT silver contact SM basic switches. Basic switches are mounted in two banks controlled by a single lever. Movement of lever from the center position actuates one bank of 4 switches in each extreme position providing a variety of wiring combinations. Splash type bushing and lever seals prevent the entrance of moisture and dust behind the panel, or into the contact area.

AC DOOR INTERLOCK SWITCHES

For use on hazardous electronic equipment. They automatically cut power when service door or drawer is opened helping to protect personnel and equipment.

To test circuits with the power "on" the actuating rod can be manually set (pulled) to a maintained-on position. The actuating rod automatically returns to the normal or reset position as door closes.

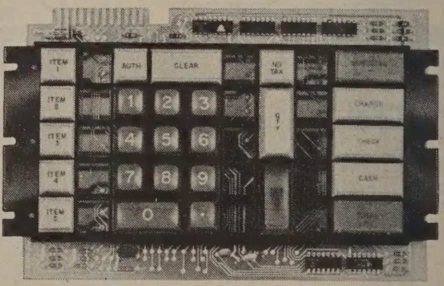
KEYBOARDS



MICRO SWITCH now offers a line of truly effective, Sealed Solid State Keyboards for applications in industrial, aerospace, marine, military and other severe environments. These ruggedly constructed, sealed keyboards are especially designed to provide protection against accidental spills of coffee or sodas, splash-over or drip through of oil and moisture, and accumulation of sand, dust, chips or other contaminants which can damage or cause failure of non-sealed units. In addition, this custom designed sealing capability protects the expensive electronics usually located behind or underneath the keyboard. Sealed keyboards meet the requirements of NEMA 2, 3, 3R, 12 and 13, and military specifications (MIL-STD-202) for sealing, vibration and shock.

KEYBOARDS TO FIT EVERY NEED

At MICRO SWITCH, we have the world's most complete line of solid state keyboards . . . which means unmatched design flexibility for you. Our application engineers will custom tailor a keyboard to your exact specifications, whether from our time-proven SW series or our new low-profile SD series.

Choose from keys offering over 10,000 legends, 30 colors, and 60 shapes, including standards, sculptured or re-legendable keys — or create new keys to fit your needs. Even lighted and two-level keys are available.

MICRO SWITCH keyboards are available with features like MOS, TTL and DTL encoding, and with two-key or N-key rollover. Your choice of alpha and numeric arrays.

So whatever your needs, and whatever your budget, we'd like to supply a keyboard to fit. Contact a MICRO SWITCH Branch Office for complete information.

TYPE SX SUBMINIATURE BASIC SWITCHES

The SX series basic switches are the smallest snap-action switches from MICRO SWITCH. These switches are ideal where savings in space and weight are important. Unless otherwise noted, all listings have silver contacts. Variations include high temperature designs for up to 400°F (204°C), gold contacts for low energy applications, and bifurcated gold contacts for maximum reliability.

The SX switches are available with several types of terminations. The T and T2 terminals provide easy lead wire attachment.

Additional terminal types and switch/actuator variations are available in Catalog 200.

MICRO SWITCH A DIVISION OF HONEYWELL
FREEPORT, ILLINOIS 61032 / PHONE (815) 235-6600

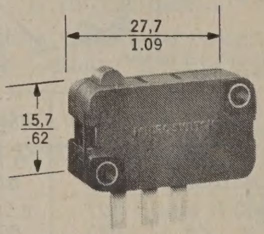
XL MECHANICALLY OPERATED SOLID STATE SWITCHES

Series XL combines precision mechanical switch operating and mounting convenience with solid state reliability. It uses the Hall sensor developed by MICRO SWITCH. An integrated circuit, actuated by a magnet located in the operating plunger, produces a digital output.



Mounting dimensions and mechanical characteristics are similar to the popular V3 type snap-action switch. Over 500 actuators are available, including pin plunger, straight levers, simulated roller levers, and roller levers.

XL switches can be used directly with electronic circuits, such as discrete transistors, integrated logic or SCR's. The digital logic level output eliminates the need for conditioning circuitry to obtain a square wave output.

Terminals are combination solder/quick-connect. A terminal housing can be provided for use with AMP .110″ push-on terminals.

For more information, see Product Sheet XL.

ELECTRICAL CHARACTERISTICS, 5 VDC CIRCUIT

	Typ.	Max.	Remarks
Supply Current* At 24° ±2°C, supply voltage of 5 ±0.5% VDC	2.5mA	4.0mA	Output transistor OFF

△ Lever may not be self returning.

‡ Typical values. Contact Branch Office for information on tolerance.

** Other lever styles are available. Contact Branch Office.

NOTE:
The output transistors of the listings shown are "normally open", i.e., they are not conducting with plunger in free position. To order devices which are "normally closed" (conducting with plunger in free position), substitute 12 for 11 immediately after the XL in the catalog listing. Example: 37XL12XA-11.

TYPES Z AND A STANDARD BASIC SWITCHES

The type Z switch design meets most applications needs. Modifications of the standard silver contact design and material, spring configuration, and plunger locations give the type A switches greater electrical load handling capacity. Other changes in materials and switch design provide operating characteristics, temperature tolerances, and sealing to cover a wide range of special requirements. See Catalog 100.

Terminal variations include solder, quick-connect, and side facing screws.

Features include operating force down to 1 oz (28,4 gms.) Differential travel down to .0002 to .0003 inch (0,005 to 0,008mm). Power load switching capacity to 25 amps and motor handling capacity of 2HP at 250 VAC.

Catalog 100 provides additional listings for all variations and accessories shown in this section.

TYPE SE AND XE ENVIRONMENT-PROOF SWITCHES

Type SE and XE switches are the smallest environment-proof switches offered by MICRO SWITCH. Both types enclose basic switches within a corrosion resistant aluminum housing. Type SE switches enclose a type SM basic switch and XE switches enclose the smaller SX basic switch.

Type SE and XE offer power load switching capability to 7 amps and temperature tolerance to 230°F (110°C) with high temperature versions to 300°F (149°C). Catalog 200 gives additional information and listings for SE and XE switches, actuators, and terminations.

MERCURY SWITCHES

MICRO SWITCH mercury switches are glass tubes into which stationary electrodes and a pool of mercury are hermetically sealed. Tilting the tubes moves the mercury pool, which makes or breaks contact between the electrodes. There is a wide range of sizes, electrical capacities, and operating characteristics. Maintenance costs are minimized since there are no moving parts to wear out.

FREEPORT, ILLINOIS 61032 / PHONE (815) 235-6600

SERIES SR MAGNETICALLY OPERATED SOLID STATE PROXIMITY SENSORS

Series SR solid state Hall effect sensors are versatile, reliable devices operated by the magnetic field of a magnet or electromagnet. They can be used directly with electronic circuits, such as discrete transistors, integrated logic, or SCR's. The digital level output eliminates the need for conditioning circuitry to obtain a square wave output.

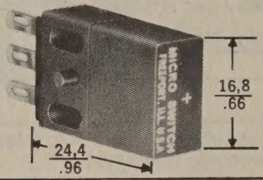
400SR SENSORS

The rugged 400SR plastic package has elongated mounting holes which simplify mounting and adjustment. Solder quick-connect (3-pin) terminals accept standard .110 x .020 push-on connectors. A locating boss aids in sensor orientation and gang mounting. The boss corresponds to an indentation on the other side of the housing to facilitate positioning. A silver cross mark on the sensor face identifies the sensitive area for accuracy in magnet location.

103SR SENSORS

Solid state circuitry for the 103SR is sealed in a threaded aluminum bushing providing environmental protection, plus ease of mounting and adjustment. Six-inch 20-gage stranded leadwires are color coded (other types and lengths are available). The output can be either digital current sourcing, sinking, or analog (linear).

These sensors meet the applicable portions of NEMA Type 3, 3R, 3S, 4, 4X, 6, 12 and 13 classifications.



For more information, see Product Sheets SR and 400SR. Data is included on magnetic field sensor, interfacing, magnets and Calibrated Hall Element.

† Operating characteristics apply over the full temperature range and 6-16 VDC supply.

SERIES XK FERROUS METALS SENSITIVE PROXIMITY SENSORS

Series XK Proximity Sensors are ferromagnetic metals sensitive and will detect stationary or moving targets. They are actuated without physical contact or attraction between the sensor target. Ordinary ferrous metal of any thickness or thin non-ferrous metal foil targets will operate the device.

Completely self-contained, XK sensors utilize the Eddy current principle.

These sensors meet the applicable portions of NEMA Type 3, 3R, 3S, and 13 classifications. They are capable of being gang mounted for use in cam sequencing applications.

ORDERING INFORMATION

Catalog Listing	Termination
101XK11-1	One foot of 22 Gage stranded, irradiated PVC insulation
101XK11-Q	Accepts AMP "110" faston or other .110 x .020" push-on terminals

Fall Time		1.0µsec.	90% to 10%

AV SERIES VANE OPERATED SOLID STATE POSITION SENSORS

Series AV incorporates a Hall effect sensor and magnet in a rugged easy-to-apply package. It is operated by passing a ferrous vane through the gap between the magnet and Hall sensor. The vane shunts the magnetic flux from the Hall sensor, causing a digital output to be produced.

Unlike magnetic pick-ups, there is no minimum speed of operation. The AV may be operated at any speed from 0 to 100 kHz. As long as the vane is in the gap, the output remains in the operated condition. The On and Off time can be programmed by the dimension of the vane, enabling the sensor to be used in many application situations.

The AV may be used as a limit switch by operating with one large vane; as a tachometer sensor by using a toothed wheel; or as a machinery synchronizing element by using a cam or sector. Leadwires or 3 pin solder/quick-connect termination is available. The housing material and leadwires are UL recognized.

For more information, see Product Sheet AV.

SERIES FW MINIATURE SELF CONTAINED PROXIMITY CONTROLS

100FW SERIES

Series 100FW proximity switches utilize the eddy current principle. They are actuated by metal objects without physical contact.

Shielded Sensor. Switches with a shielded sensor have the housing extended flush to the sensing face, thus shielding the sensor from the effect of metallic material that might be located near the sides of the switch.

Unshielded Sensor. Switches with an unshielded sensor have a longer operating point than the shielded design. 100FW series switches detect all metals and are especially sensitive to ferrous types.

200FW SERIES

Series 200FW proximity switches are operated by the magnetic field of a permanent magnet or electromagnet. The switching element is a Hall sensor with a digital output.

Sensor Design. The sensor is completely shielded with an all-metal face which provides physical and environmental protection to the switch. Since the 200FW is not affected by surrounding non-ferrous metals, the sensor can be used in applications that require detection of movement through a non-ferrous wall.

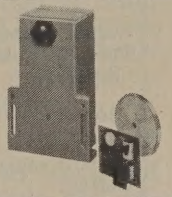
OTHER PRODUCTS

NO-TOUCH POSITION SENSING SWITCHES

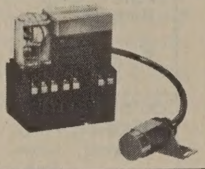
REQUEST CATALOG 100.

PHOTOELECTRIC CONTROLS



Photoelectric controls detect opaque or translucent materials at short or long range. The many types provide you with the broadest selection available.

PROXIMITY CONTROLS



Proximity controls respond to the nearness of metal. MICRO SWITCH offers the most complete line in the industry.

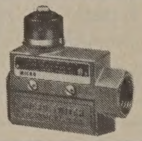
ELECTRO MECHANICAL POSITION SENSING SWITCHES

REQUEST CATALOG 100.

OILTIGHT LIMIT SWITCHES

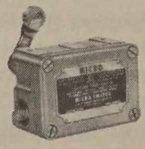
Various limit switches provide years of application proven reliability even in the most demanding environmental conditions.

ENCLOSED SWITCHES



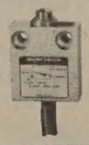
Enclosed switches provide a wide selection of sizes, sealing, actuation, circuitries and electrical ratings.

EXPLOSION-PROOF SWITCHES



Some explosion-proof switches are fully interchangeable with non-explosion proof types. Others are both explosion-proof and sealed for use in outdoor hazardous applications.

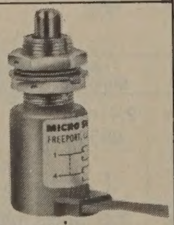
MINIATURE OILTIGHT LIMIT SWITCHES



The "914CE" are miniature enclosed switches. They are environmentally sealed and have a pre-wired cable.

SMALL SEALED LIMIT SWITCHES

REQUEST CATALOG 200.

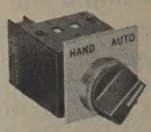


"EN" limit switches offer environment-proof versatility. Many combinations of actuators, circuitries, terminals and electrical ratings are offered for military aerospace and commercial aircraft applications.
The "HE" is a hermetically sealed version of the EN switch. Applications will be similar except the HE meets maximum sealing requirements.
"HR" switches combine hermetic sealing with high temperature capabilities.

MANUALLY OPERATED CONTROLS

REQUEST CATALOG 100.

PW MINIATURE OILTIGHT

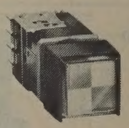


Square format PW Miniature oiltight manual controls save panel space yet provide much of the same operating choices as heavy duty oiltight devices.

PT HEAVY DUTY OILTIGHT

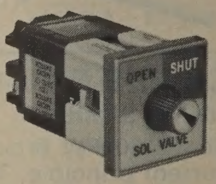
Heavy duty oiltight controls use tandem mounted contact blocks for multiple circuitry choices. Large square legend plates communicate even under the worst conditions.

PM COMPACT OILTIGHT



Modern square shape PM compact pushbuttons/indicators are the smallest oiltight controls.

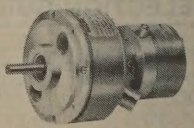
CMC MULTILIGHT OILTIGHT



MICRO SWITCH CMC combines switching, indicator and legend into a single unit with up to 16 heavy duty or 32 electronic duty circuits in an almost unlimited sequence of actuation.

ES CURRENT SENSOR

The ES package contains a solid state Hall sensor operated by a very low resistance coil. A digital output is provided as long as the current exceeds the specified level. They are used in circuits to protect against damage due to short circuits or other overcurrent conditions. 100 MICROSECOND RESPONSE TIME. Request Product Sheet ES for more details.



DC CONTROL MOTORS

If you'd like to give your products a faster start, ask us about our complete line of low inertia motors with fast acceleration and deceleration. Sizes from 1 to 6 inches diameter, with integral tachometer options. Request product sheets for more details.

Low-cost, low profile reliable rotary switches, with up to 10 factory-set stops, featuring patented "poker chip" detent action for fast, positive positioning. Detent index is 36 degrees. Both models measure .570" dia. and .300" high. They have molded-in terminals and a slotted shaft for screwdriver adjustment.

Model SW62S has molded-in spacers for PC board standoff.

Model SW67S is O-Ring sealed, both shaft-to-bushing and bushing-to-panel.

See Bulletin S-67 for detailed specifications.

Model SW32 (PC board mounting)
Model SW37 (Panel mounting)

Lowest profile switches available. These O-Ring sealed rotary selector switches provide control of several circuits in an absolute minimum of space. Detent action is at 60 degree intervals. Both switches measure .350" in diameter. They are ideally suited for miniaturized electronic and communications equipment and testing circuitry.

Model SW32 has ½ inch tinned terminal leads.

Model SW37 has solder-lug terminals.

See Bulletin S-66A for detailed specifications.

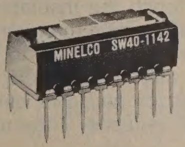
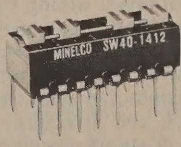
Miniature DIP Slide Switches



MINELCO SW40-1142



MINELCO SW40-1412

Model SW-40

Minelco Miniature DIP Slide Switches are available in the widest variety of switching combinations in the industry. They feature true "make-before-break" action and have spring loaded, double ball bearing detent action for smooth and positive location of each switching position.

Each switch can perform many functions. They are designed for a wide variety of applications. Clear plastic cover optional.

See Bulletin SW-69

ROTARY SWITCHES

There's an Oak Product For Almost Every Switching Need.

The Switch Division of Oak Industries Inc. offers the industry's broadest range of switching devices. Switch types include:

Rotary	**Rocker**
Lever	**Toggle**
Pushbutton	**Keylock**
Keyboard	

A complete line of solenoids; rotary, linear, tubular, stepping switch and the Magton high precision rotary solenoids are also available from OAK. See **eem** Page 3614 Solenoid Product Section 4500 for additional information.

There are dozens of catalogs that describe the products in detail. Only a limited amount of data is given in these pages. Contact your OAK distributor or field sales office, listed in the directory section of **eem**, for catalogs and product information.

A major service to switch users is Oak's complete in-house fabricating, and assembly capability. Oak can handle all metalworking, wiring and PC board attachment requirements, to deliver a finished switch subassembly ready to incorporate into your equipment.

For IMMEDIATE DELIVERY, most popular types of Oak Switches are available from stock through a nationwide network of electronic distributors.

ROTARY SWITCHES

STANDARD TYPES

The most extensive line of stock rotary switches in the industry, from ½" diameter to 2$\frac{5}{16}$" diameter are available. A wide range of the most popular types, are stocked for immediate delivery by OAK distributors nationwide.

OFF-THE-SHELF SWITCHES

Typical of the variety of switch configurations is the distributor product listing for the Type AM "Acorn" 1" diameter switch shown on the next page. In addition, a similar choice of switches is available on the types listed below:

- ½" Subminiature enclosed, 11 position, up to 4 sections, 1-3 poles per section. Single section switches with PC terminals.
- 1$\frac{5}{16}$" Type F and FC, 11 position, up to 2 phenolic or ceramic sections, 1-4 poles per section. (Single section switches with PC terminals).
- 1⅞" Type H and HC, 11 position, up to 4 phenolic or ceramic sections. 1-4 poles. Single section switches with PC terminals.
- 1$\frac{17}{32}$" Type K, 12 position, up to 6 phenolic sections, 1-6 poles, plus special purpose types.
- 1$\frac{17}{32}$" Type JC, 12 position, up to 5 ceramic sections, 1-6 poles, plus special purpose types.
- 2$\frac{5}{16}$" Type L and MF, up to 23 positions, 4 phenolic sections, 1-2 poles. Single section switches with PC terminals.

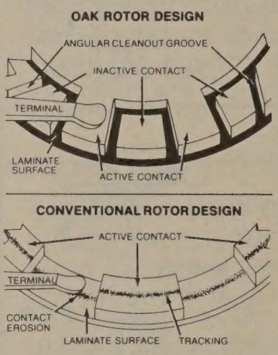
MODULINE™ ROTARY SWITCHES

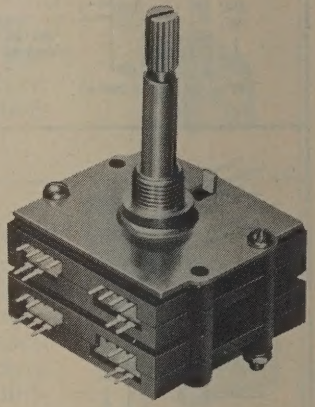
In addition to the complete assembled, off-the-shelf switches, the MODULINE program offers you an almost unlimited choice of switch modifications, with fast delivery from the distributor's factory-approved assembly facility. You can select the detent angle, switching configuration, shaft length, shaft end, shaft angle and bushing style, in up to 5-section switches.

MODULINE switches are generally shipped by the distributor in 3 days or less, depending on quantity. Request Form SP-467 for more information.

NEW "COMMUNICATOR" PROGRAMMABLE UP TO 60 POSITION ROTARY SWITCH

Eliminates opens, shorts, backlash and internal misalignment





The Communicator Series rotary switches from Oak mark a breakthrough in rotary switch design. Functional design innovations offer unparalleled long-term contact registry and switch integrity. For the first time ever, a switch capable of up to sixty positions can be offered with guaranteed switch position accuracy for the life of the switch.

The exclusive rotor design assures high dependability because the stationary wiping contacts never touch the insulator surface. Instead, they move from electrically active to electrically inactive metal surfaces. Tracking is eliminated due to Oak's exclusive clean-out grooves and rotor circuit design. In addition, contact erosion or the formation of particles between contact and insulator is drastically reduced. Intermittent opens or shorts are eliminated.

Index notches in the edge of the PC board rotor function as a cam for the detent mechanism. Since the rotor and cam are of one piece construction, misalignment between detent and contact as well as backlash from loose rotors is virtually impossible!

Fully programmable design with up to 60 detent positions are available. Oak will design a metalization layout for the double-sided PC board to match your truth table and provide the desired outputs. A single section can accommodate two seven-segment readouts or two eight-bit binary codes with separate commons. The number of switch positions is programmed by changing the number of index notches cut into the board edge. Request Form F-890 for more information.

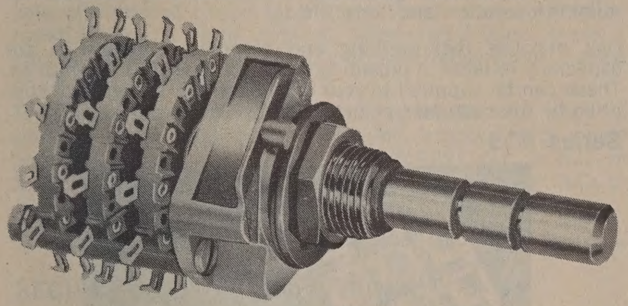
ROTARY SWITCHES

Typical of Distributor Availabilities is this Listing from the Oak Distributor Catalog

TYPE AM "ACORN" 1″ ROTARY SWITCH



Rugged miniature switches with diallyl phthalate stators insulation and acetal copolymer rotors.

Designed to meet demanding electrical and mechanical requirements. Only 1″ in diameter, ideal for spacesaving applications in transistorized circuits, miniature electronic equipment and instrumentation. Materials and finishes suitable to withstand 50-hour salt spray test. Contacts are silver plated brass with gold plating. Offer longest shelf life and easy solderability; double-wiping and self-cleaning. For unusually severe circuit requirements, use switches with silver alloy contacts, listed below.

SPECIFICATIONS

SIZE: 1″ dia. nominal, with 1 to 3 sections. Max. Depth, 1³⁄₃₂″.

MOUNTING: Single hole, with ⅜-32 bushing, ⅜″ long. Locating lug on ⅜″ radius.

SHAFT: .250 $^{+.000}_{-.003}$; 1½″ long; grooved for break-off at ¾″, 1⅛″.

INDEXING: Unidex™ 30°.

STOP STRENGTH: One fixed stop, 15 in./lbs.; one adjustable stop, 10 in./lbs.

STATOR INSULATION: Diallyl Phthalate per MIL-M-14.

ROTOR INSULATION: Celcon (Acetal Copolymer).

FINISH: Suitable to withstand 50-hour salt spray per MIL-S-3786.

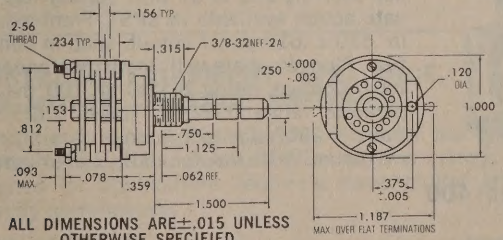
CONTACTS STANDARD: Silver plated brass, with additional gold plating of 15 millionths.

CONTACT RESISTANCE: 0.003 to .015 ohms.

ELECTRICAL RATING: Break .5 amp at 28 volts DC, 0.25 amp at 110 volts, AC, resistive. Carry 5 amps.

HARDWARE: Includes ⅜-32 mounting nut and lockwasher.

PACKAGING: Oakote protective packaging protects switches from tarnish and corrosion.



ALL DIMENSIONS ARE±.015 UNLESS OTHERWISE SPECIFIED.

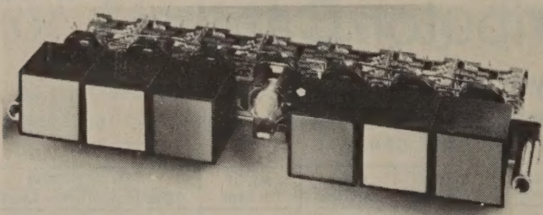
PUSHBUTTON AND KEYBOARD SWITCHES

Illuminated Pushbutton Switches

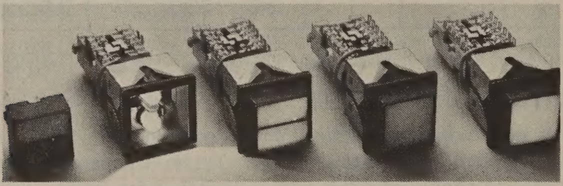
Series 300



The Series 300 pushbutton switches are constructed for reliable performance and long life (500,000 minimum) in demanding applications. Single, dual and four-lamp displays, with momentary, interlock, alternate action or indicator available on the same switch bank. Switching up to 4PDT. Modular design, with up to 12 stations on a single bank, in any switching mix. Front relampable, with replaceable legend plates and button assemblies. Lamps are stationary, eliminating movement when button is actuated. Lamp terminals are independent of switch and can be factory wired.

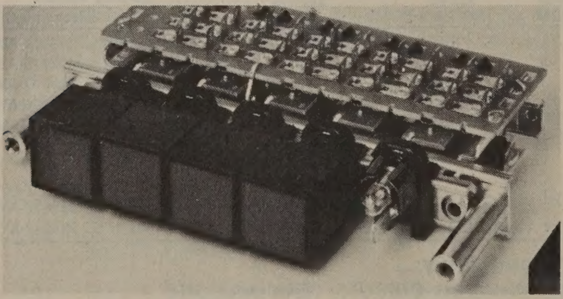
Options include solder clip, printed circuit clip or printed circuit lug, terminals; choice of lunar white, white, red, green, amber, yellow, orange or blue legend plates. Rated at 0.5 A @ 28 VDC, 0.25 A @ 110 VAC for silver plated brass contacts, at 1.0 A @ 28 VDC, 0.5 A @ 110 VAC for solid silver contacts. For more information request Form F-853.

Series 300SL



Single pushbutton switches with snap-in construction for fast mounting. Same reliable switch design as Model 300, with some options and ratings. Single or split display with dual-lamp construction. Button housing has finger grip for easy removal to permit lamp replacement from front of panel. For more information request Form F-853.

Series 1300



Series 1300 switches are low cost, single-lamp, single display, front relampable units that can be supplied with up to 21 buttons on a bank. Buttons are on ¾" centers. Low power modules, rated 1 A @ 28 VDC have up to 10-pole switching capability. Power type, rated 6 A @ 125 VAC available as DPDT or 4PDT. Button operations include normal latching, momentary, accumulative latching, notched latching, push-push, group latching and mechanical or electrical blockout.

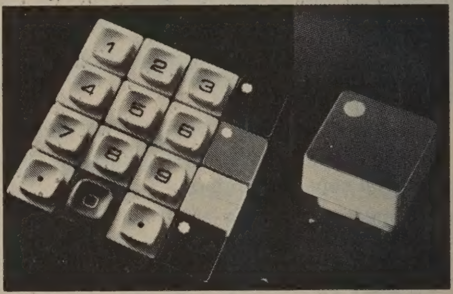
Keyboard Switches

Four series of Oak keyboard switches offer a wide range of design options for any application from data entry terminals to business machines.

All series can be supplied in a wide range of key colors and legends. All feature gold-alloy, crossbar-wiping contacts for reliable operation and long life.

Oak in-house metalworking and assembly capabilities are especially reliable in providing complete keyboard assemblies. These can be supplied to your specifications, using parts supplied by the customer, or produced by Oak.

Series 415



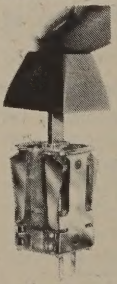
The low-profile Series 415 has a height of 0.415" above the printed circuit board and is available with either ⅝" or ¾" square buttons, or rectangular for two station operation.

SPST, normally open, tested to 10 million operations. Temperature range −20°C to +75°C. Travel 0.100", pretravel 0.70". Contact bounce 3 milliseconds maximum. Write Oak for additional information.

Series 415LED

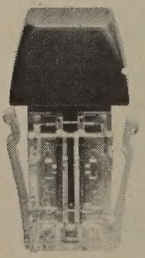
The basic Series 415 switch, with flat top and light emitting diode to provide positive visual confirmation of data entry and operation status. Eliminates errors in operation of data terminals, communications, security and educational equipment. 0.610" square buttons allow the Model 415LED to be combined with Model 415 on the same keyboard array. (Request Bulletin F-729 for additional information).

Series 475



The compact, high reliability Series 475 switches have been tested for more than 20 million operations. Available switching actions include SPST and DPST, N.O. or N.C., SPDT non-shorting and SPST with dummy lug. Alternate action available in SPST. Front-mounting in .510 x .610 panel cutout, snap-in construction. Plungers mate with industry standard key tops. Contact rating 5 VDC @ 100 ma. Temperature range 0-85°C. Travel 0.125". Pretravel 0.090". Contact bounce 3 milliseconds maximum. Write Oak for additional information.

Series 400



Combines low cost with long life (20,000,000 operations) in a housing 0.5 x 0.5 x 1.0 high. Available with either plug-in or optional snap-in mounting. Switching options include SPST, DPST, N.O. or N.C. and SPST with dummy lug. Also available are positive non-shorting SPDT and alternate action SPST, N.O. or N.C. Contact rating 5 VDC @ 100 ma. Temperature range 0-85°C. Travel 0.125". Pretravel 0.070". Contact bounce 3 milliseconds maximum. Write Oak for additional information.

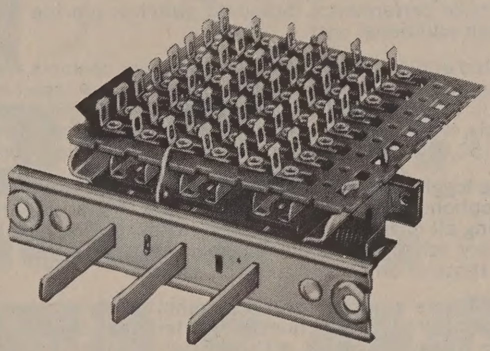
PUSHBUTTON, KEYLOCK AND POWER ROTARY SWITCHES

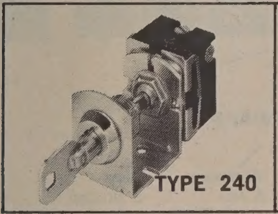
MULTIPLE PUSHBUTTON SWITCHES

Full flexibility, permitting a wide range of circuit design possibilities, is incorporated in Oak's multiple pushbutton switches. Available with solder tab terminals, quick connecting terminals, and printed circuit tabs. Current and voltage ratings on resistive load at room ambient: silver-plated brass, break 1 amp at 28 VDC, 0.5 amp at 110 VAC; silver alloy, break 2 amps at 28 VDC, 1 amp at 110 VAC.

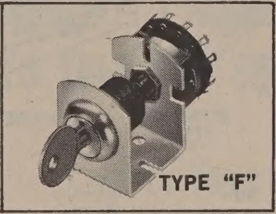
Type 130 (shown) provides from 1 to 21 buttons with ¾″ spacing, or 1 to 25 buttons with ⅝″ spacing. With single phenolic insulator, switching is up to 6 SPST, N.O. or N.C., or 5 SPDT; with stators on two sides, 12 SPST, N.O. or N.C., or 10 SPDT. Request Form SP-684 for more information.



SECURITY KEYLOCK SWITCHES



TYPE 240



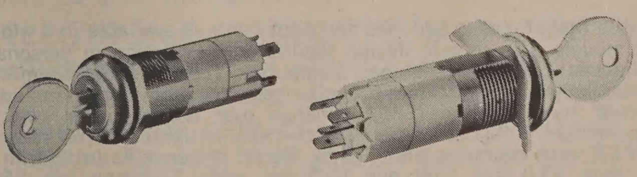
TYPE "F"

For applications requiring maximum security. Oak provides keylock switches for power requirement of 1 to 38 amps and from 2 to 8 switching positions. These tamper-proof keylocks are available in cylindrical and flat key styles with a wide range of standard key pull locations.

The economical Type 240 keyswitch series for industrial equipment and appliances handle power input ratings of 7½ to 38 amps, including motor ratings of ¼ to 1 H.P., 120 V, or 2 H.P. at 240 V. Single or double pole switching is available with indexing from 2 to 8 positions with key pull locations in increments of 45 degrees. Request Form SP-735 for additional information.

Low power rotary switching with keylock security utilizes the Oak "F" type switch, which features a patented Unidex™ detent with a choice of 36, 45, 60, and 90 degrees throw with key pull locations in increments of 45 degrees. Current and voltage ratings with resistive load at room ambient: silver-plated brass break 1 amp at 28 VDC; 0.5 amp at 110 VAC; silver alloy break 2 amps at 28 VDC; 1 amp at 110 VAC. Multiple section switches available. Request Form F-706 for further information.

ANTI-STATIC KEYLOCK SWITCHES



Combines security with equipment circuit protection against static discharges that can reach 20,000 volts under appropriate atmospheric conditions. Essential in data terminals, and any other low current devices. Long life, up to 10,000 operations, UL and CSA listed with wide range of key and switching options.

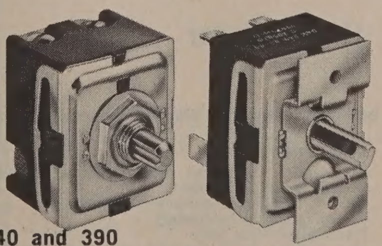
Operating voltages from dry circuit to 4 amps @ 120 VAC: ¾″ diameter x 2$\frac{1}{16}$″ deep for high density packaging. Switching enclosed: SPST, SPDT, SP3T, SP4T, DPST. Electrical ratings: 1.0 amp @ 28 VDC, 4.0 amps at 120 VAC, Contact resistance: 10 milliohms. Request Form F-781 for additional information.

ELECTRICAL EQUIPMENT, APPLIANCE, AND MOTOR CONTROL SWITCHES

Oak offers three series of rotary switches for the control of diverse electrical equipment, appliances, and motors. All are designed for applications requiring compactness and high capacity performance.

Series 910

Engineered on the long-accepted "Diamond H" slow-break principle, Series 910 switches provide high capacity, dependable switching, and years of reliability. Available with 2, 4, or 6 spade terminals for simplified wiring. Single or double pole, 2 to 8 positions (off-on, 3 to 7 heats) with special circuit variations and motor rated circuits also available. Ratings: 15 A, 120-240 V; 20 A, 120-240 V; 1 H.P., 120 V; 2 H.P., 240 VAC only; 30 A, 120-240 V; 1 H.P., 120 V; 2 H.P., 240 VAC only; 20 A max. on any one circuit. ½ to 1 H.P., 120 V; 1 to 2 H.P., 240 VAC. Request Form SP-587.



Series 240 and 390

Series 240 with screw terminals and Series 390 with spade terminals are electrically and mechanically interchangeable. Available with single or double pole, indexing from 2 to 8 positions in steps of 45, 51.42, 60, 72, 90 or 180 degrees, operating full rotary or with stops as required. U.L. listed. Standard AC ratings range from 7½ to 38 amps, including motor ratings of ¼ to 1 H.P., 120 V; 2 H.P., 240 V. Request Form SP-738 for additional information.

TOGGLE SWITCHES

This new series of Oak miniature toggle switches offer many important **standard** features that make them the preferred switch for all commercial applications. In spite of their small size, their rugged construction assures no compromise with quality or performance. Standard switches provide the following characteristics without additional cost.

■ Rated at 6 Amp @ 125 VAC ■ Solid silver contacts are standard ■ U.L. and C.S.A. listing available ■ High impact, molded case ■ Insert-molded or epoxy-sealed, terminals eliminate solder flux contamination ■ High-torque-resistant bushing assembly, with mounting hardware ■ Anti-rotational actuators ■ Long operating life (over 50,000 cycles) ■ Vibration resistant construction.

These toggle switches are available in an almost unlimited range of combinations and options. Theoretically, over 200,000 variations are possible. Most types, including all of the most popular switches, can be supplied from stock, or on short delivery schedules. Compare the number of styles and options described here with those of other toggle switch sources.

■ Six toggle actuators plus a pushbutton style ■ Available in 1, 2, 3 or 4 poles ■ Nine switching functions ■ Six terminal styles, including three PC types ■ Three contact materials ■ Three bushing styles, plus o-ring seals ■ Three handle and hardware finishes ■ Three mounting nut types ■ Nine color caps. Request Form F-811 for more information.

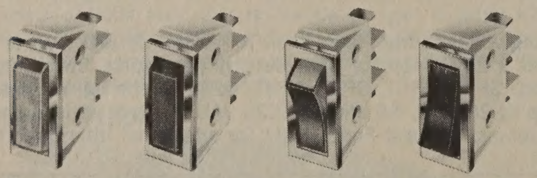
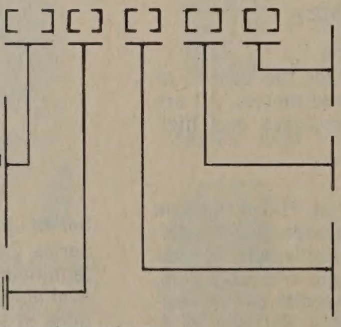
SNAP-IN ROCKER SWITCHES, PILOT LIGHTS



This versatile line of rocker switches and pilot lights is available in a wide variety of models. The snap-in design facilitates installation in personal care appliances, business machines, computers, test and measurement instruments, home and restaurant appliances. Available types include lighted on-off rocker switch (SPST), change over on/on rocker switch (SPDT), momentary unlighted rocker switch (NO), unlighted on/off rocker switch (SPST), and matching pilot lights. Metric dimensions (with trim): 33.4 mm. long, 33.0 mm. high, and 15.0 mm. wide. Terminals are .250 Quick-connects. Your Oak distributor can supply any of the switches that can be described by the part numbering system shown. Request Form F-924.

How to Order



Series indicates body color switch and or indicator function.

White Body	Black Body	Description
14	24	On/off/on, 3 position, center off, unlighted
15	25	On/off, spst, unlighted
16	26	On/on, spdt, change-over, unlighted
17	27	On/off, spst, illuminated
18	28	Neon pilot light only
19	29	Momentary; spst, normally open unlighted

Trim
T = Chrome Bezel added if requested

Voltage must be specified on illuminated versions only due to the internal series resistor required for the neon lamp.
—1 = 16 Amp, 120 Volts ac. (Lighted only)
—2 = 8 Amp, 240 Volts ac. (Lighted only)

Actuator or lens shape.
F = Flat shape of actuator or lens
C = Curved shape of actuator or lens

Actuator or lens color.
W = White actuator
B = Black actuator (unlighted only)
A = Amber color lens
R = Red color lens
C = Clear color lens

Part numbers and code letters must be specified in the sequence shown above.

Examples:

1. 25T-W-F	Black body, on/off, spst, unlighted, trim added, white actuator, flat shape.
2. 15-B-C	White body, black actuator, curved shape.
3. 17T-R-F-1	White body, trim added, red illuminated lens, flat shape, 16 amp, 120 volts ac.
4. 19-B-C	White body, black actuator, curved shape.

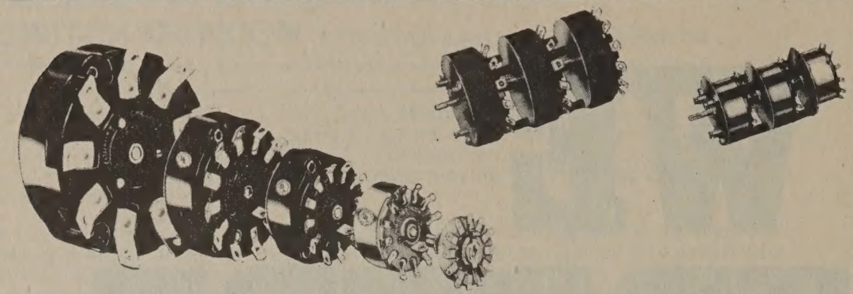
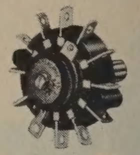
OHMITE® power tap switches, high current, non-shorting type



INTRODUCING

MODEL 711

Smallest Switch for Its Rating
7 Amps, 125 Volts



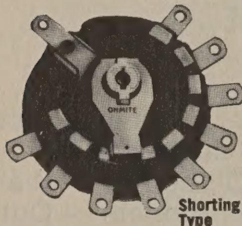
All Ohmite switches feature the slow-break, quick-make action deemed so desirable for switching of AC current.

All models except 711 feature all ceramic, arc-proof bodies and solid silver alloy, fixed and movable contacts. The large, thick, silver-alloy fixed contact disks are permanently welded to copper studs. These, in turn, are riveted and soldered to sturdy terminal lugs, assuring a permanent mechanical and electrical joint. The rotor (moving) contact, also of solid silver-alloy, is riveted and soldered to the contact arm. Face of the rotor contact is slightly rounded assuring a perfect seating of the contacts with a slight rubbing, self-cleaning motion on every operation. Models 111, 212, 312 and 412 are UL listed.

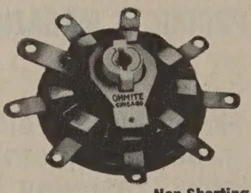
The new Model 711 tap switch was designed to achieve high current capability with small size. It is actually smaller than many low current instrument switches. It interrupts 7 amperes at 125 VAC and can carry 15 amperes AC or DC. The Model 711 features a melamine phenolic body with solid silver-alloy fixed and movable contacts.

Model	Alternate Current Rating		Diameter	Shaft Diameter	Max. Panel Thickness	Weight	No. of Taps
	Amps.	Volts					
711	7	125	1⅛″	¼″	⅛″	.047 lb.	3-11
111	15	125	1¾″	¼″	¼″	.16 lb.	3-11
212	20	150	2¼″	¼″	¼″	.4 lb.	3-12
312	30	300	3⁵⁄₁₆″	¼″	¼″	.75 lb.	3-12
412	50	300	4³⁄₁₆″	¼″	¼″	1.4 lb.	3-12
608	100	300	6″	⅜″	1″	5 lb.	3-8

ALL CERAMIC OPEN TYPE TAP SWITCHES



Shorting Type



Non-Shorting Type

Designed to transfer currents of several amperes in circuits requiring high voltage insulation. Ceramic body construction. Monel metal taps; silver-graphite brush.

Switches up to 8 taps are approximately 3¼″ diameter including lugs; 9 to 12 tap switches are approximately 4¼″ diameter. Switches can be ordered assembled 2 to 3 in tandem. Single hole mounting by means of ⅜″ diameter bushing and hexagon nut accommodates panels up to ¼″ thick (maximum).

Maximum current capacity is 7 amperes but only 3 amperes at 120 V.A.C. should be interrupted. Current ratings are less for all direct current circuits above 20 volts, for inductive circuits and high voltages.

OHMITE® OHMITROL solid state power and motor speed controls

FEATURES:

- Conserves space & power
- Smallest 1 & 2 KW control
- AC & DC output types
- Built-in on-off switch
- Adjustable control range
- Choice of component & portable styles
- Long life

ELECTRICAL FEATURES

Load rating: 10 amperes 125/250 volts ac.
Contacts: fine silver, double-break, break-before-make
Circuits: single-pole and double-pole
Dielectric strength: 2000 volts ac rms.
Life: 25,000 operations at maximum rating

MECHANICAL FEATURES

One-piece molded-nylon body has integral, serrated, spring-lock clips.
Bezel molded integral with body.
Metal bezel available.
Molded-in light-dispersing lens.
Interchangeable lens-caps in wide choice of colors.
Positive mechanical indication of switch-contact position.
250,000 mechanical operations.

TERMINALS

Style A—1/4-inch quick-connect
Style B—3/16-inch quick-connect
Style C—Solder-lug, for #12 wire

STANDARD LAMPS

Integral with switch;
Internally connected per diagrams above.
6, 12, and 28 volt incandescent lamps standard.
125 and 250 volt neon lamps standard.

SPECIAL ORDER LAMPS

125 volt incandescent lamp available.
125 and 250 volt Blue or Green neon lamps available. Consult factory for price and delivery information.

COLOR DESIGNATIONS

Body and integral bezel
White—C7, Grey—C8, Black—C9,

Transparent lens-cap
Red—1, Clear—2, Amber—3,
Green—4, Blue—5

Opaque pushbutton-cap
White—7, Grey—8, Black—9,
Blue—10, Green—11, Red—12

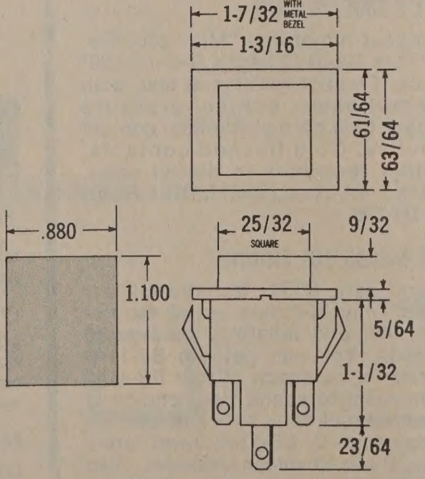
TYPE DG – Lighted Indicators

Type DG Lighted Indicators are identical in size and mounting with Type DL and DP switches and can be grouped easily with them without need for special mounting provision. A choice of different lens-cap heights is available.

TYPE DGS the low-profile indicator extends the same distance from the panel as the Type DL or DP switch in its ON position (1/16 inch).

TYPE DGT the high-profile indicator extends the same distance from the panel as the Type DL or DP switch in its OFF position (9/32 inch).

OUTLINE DIMENSIONS
(inches)



METAL BEZELS (optional)

Gold-color—F1, Chrome—F2

MARKINGS

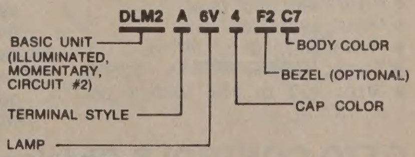
Letters, numbers, and symbols can be applied to lens-caps.

MOUNTING

Snap-in mounting in rectangular hole; fits any panel-thickness 1/32 to 3/16 inch.

ORDERING EXAMPLE

Develop catalog-number of unit by adding to the basic Type Number, shown above, the applicable code-letters or numbers in the sequence shown below.



OSLO CONTROLS INCORPORATED

417 Washington Ave., North Haven, Conn. 06473 Tel. (203) 239-3515

OTTO CONTROLS **OTTO CONTROLS**

OTTO snap-action switches MAKE & BREAK everytime

because the OTTO design features inherent rocking-action that breaks welds and wipes contacts clean.

PUSHBUTTONS* miniature & moistureproof

TYPE P1 (MIL-S-8805/3)

P1-1

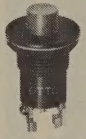
P1-2

P1-3

P1-5

P1-6

P1-7



P1-8

FEATURES

- 250,000 mech. cycles.
- High contact pressure: 120 gr.
- Low contact resist: <10 milliohms.
- Repeatable trip point within .001".
- Rolling sleeve principle seals button.
- Sealed case and terminals.

Pushbutton is sealed by silicone rubber boot operating on a "rolling sleeve" principle to give long life and smooth operation. Case & terminals sealed against environment and solder flux. Load ratings: 10 A. res., 5 A. ind., 3A. lamp. Contact forms: N.O., N.C., 2-circuit. Red or black button.

TYPE P3 Commercial Grade

P3-3

P3-6

P3-7

P3-8

Momentary or push-pull double-break action. Same specs as P1 military series. Choice of solder or screw terminals. Designed for use in panel boards, computers, business machines, instruments. Can be used as limit switch.

twostep™ for applications requiring 3 modes of operation

FEATURES

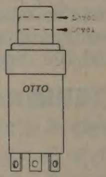
- Unique 2-position design.
- Sequential contact action.
- 12 contact arrangements.
- Make- before-break contact option.
- Moistureproof construction.
- 100,000 mechanical cycles.

P2-1

P2-3

P2-6

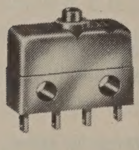
Ideal for "off-high-low", "off-slow-fast", "Stop-fine-course" applications. Each level operates an independent set of SPDT circuits rated to 5 A. Twelve contact arrangements are offered to satisfy just about any circuit requirement. Also available as DPDT single detent.



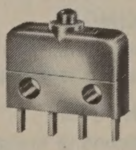
BASICS* unique patented design assures extraordinary long life less than 10 milliohms contact resistance

SUB-SUBMINIATURE

TYPE B3 for low level circuits



MIL-S-8805/76



MIL-S-8805/101

CHARACTERISTICS

- Contact Resistance: .010Ω max.
- 10 million mech. cycles.
- 100,000 cycles at full load.
- Operating Force: 5^{+3}_{-2} oz.
- Release Force: 1.5 oz. min.
- Pretravel: .035" max.
- Overtravel: .006" min.
- Move. Diff.: .015±.005 in.
- Temp. Range: −65° to +125°C.
- Size: .200" or .156" wide x .350" h. x .510" lg.

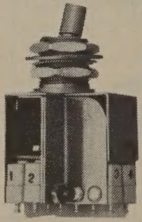
MIL-S-8805/76 THIN B3-4140

For your run-of-the- "MIL" projects, OTTO's B3-4140 series is only .200" thick. Contact resistance less than 10 milliohms, contact pressure higher than normal, minimal contact bounce. Gold flashed contacts, solder terminals in diallyl case. Rated 4A Res. SPDT; 8A. Res., SPDT-DB.

MIL-S-8805/101 THINNER B3-1140

Brand new, OTTO inspired military spec. Only .156" thin, yet all the rating, life, and reliability of the /76 version. You can get five B3-1140 series in the space of four B3-4140 with room to spare. Your choice of double-break form X, Y, Z and single break form C. B3-1140 turret terminals, B3-2140 solder terminals. Also commercial versions.

TOGGLE/PUSHBUTTON ACTUATORS



T1-0001. Four position, 6-pole toggle featuring MIL-S-8805/4 basic switches. Positions #1 & #3 are 2PDT maintained action each, position #4 is 2PDT momentary, position #2 is center "off". Rated 7A. res. each pole. **T1-0004.** Same except 3-position, 4-pole toggle. Position #1 is 2PDT momentary, position #2 is center "off", position #3 is 2PDT maintained action. **T1-0005.** Same as T1-0001 except all four positions are maintained action.

T2-0001. Combo toggle & pushbutton. It's a 2-position toggle and a pushbutton switch all in one. 30° toggle throw, .135" total pushbutton travel with 4.5 lbs. operating force. Rated 10A res. & ind.

T4-0001. Four-way toggle with 4-pole N.O. double-break momentary action. Rated 5A. res. Dims.: 1.156 dia. X 1.160 behind panel.

SNAP-IN ROCKER/LEVER SERIES R, SERIES LE

The Series R and Series LE rocker and lever switches are high quality with actuators styled to complement modern panel design. Both series snap-in front panel mounting. Bezel and actuator colors can be color coordinated. A black bezel and black actuator is supplied, unless otherwise specified. Spring steel springs hold the switches firmly in place. Rated at 5 Amperes with resistive load at 120 VAC or 28 VDC; 2 Amperes with resistive load at 250 VAC: both SPDT and DPDT versions are available. Solder-lug terminal.

SPECIFICATIONS

Contact Rating: 5 Amperes with resistive load at 120 VAC or 28 VAC; 2 Amperes with resistive load at 250 VAC.
Electrical Life: 100,000 make and break cycles at full load on all models.
Contact Resistance: 10 milliohms maximum initial at 2 to 4 VDC, 100 milliamps for both coin silver and gold plated contacts.
Insulation Resistance: 1000 megohms minimum.
Dielectric Strength: 1000 Volts RMS at sea level.

MATERIALS

Case: Black phenolic resin.
Rockers and Lever Handles: Nylon.
Mounting Bracket: Stainless steel.
End Contact: Coin silver, silver plated.
End Terminal: Brass, silver plated.
Center Contact and Terminal: Brass or zinc, silver plated.
Snap-in Springs: Spring steel, nickel plated.
Bezel: Nylon.

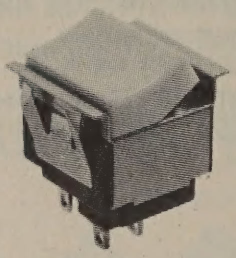
ROCKER AND LEVER SWITCHES



LIGHTED ROCKER DPDT

LIGHTED ROCKER SNAP-IN MOUNT—SERIES LR

This high quality lighted rocker switch snaps into front of panel. The bezel/lens combination suits them for attractive modern panel styling. A choice of bezel and lens colors is available (Table 1). A black bezel with a white lens is provided, unless otherwise specified. SPDT and DPDT models available. Solder-lug terminals. Bulb is not supplied. (Use bulb sizes T 1½ and T 1¾). Separate lamp circuit for added flexibility. Rated at 5 Amperes with resistive load at 120 VAC or 28 VDC; 2 Amperes at 250 VAC. Actuator/lens is removable from front for easy bulb replacement.

SPECIFICATIONS

Contact Rating: 5 Amperes with resistive load at 120 VAC or 28 VDC. 2 Amperes with resistive load at 250 VAC.
Electrical Life: 100,000 make and break cycles at full load.
Contact Resistance: 5 milliohms maximum initial at 2 to 4 VDC, 100 milliamps for both coin silver and gold plated contacts.
Insulation Resistance: 20,000 megohms minimum.
Dielectric Strength: 1000 Volts RMS at sea level.

MATERIALS

Case: Melamine.
Housing: Stainless steel.
Bezel: Nylon.
Lens: Lexan (R).
Snap-in Springs: Spring steel, nickel plated.
End Contacts: Coin silver, silver plated.
End Terminals: Brass, silver plated.
Center Contact and Terminals: Brass, silver plated.
Lamps Socket Terminals: Brass, electro-tin plated.

REAR-PANEL MOUNTED ROCKER AND LEVER

Ruggedly constructed, these compact switches can handle 5 Amperes at 120 VAC. Both rocker and lever models are available. Designed to mount behind a front panel, standoff hardware is provided. Terminals are solder-lug. SPDT, DPDT, 3PDT, and 4PDT sizes are available in both styles. Actuator color is black, unless otherwise specified. See Table 1 for color choices.

SPECIFICATIONS

Contact Rating: 5 Amperes with resistive load at 120 VAC or 28 VDC; 2 Amperes with resistive load at 250 VAC.

Electrical Life: 100,000 make and break cycles at full load on all models. All momentary models—40,000 cycles.

Contact Resistance: 10 millohms maximum initial at 2 to 4 VDC.

Insulation Resistance: 1000 megohms minimum

Dielectric Strength: 1000 Volts RMS at sea level.

MATERIALS

Case: Black phenolic resin.

Rockers and Lever Handles: Nylon.

Housing: Stainless steel.

Mounting Bracket: Stainless steel.

End Contact: Coin silver, silver plated.

End Terminal: Brass, silver plated.

Center Contact and Terminal: Brass or zinc, silver plated.

Hardware Supplied: Two screws, two lockwashers, two nuts, and two standoffs for 1/8 inch panels.

RAYTHEON TOGGLE SWITCHES

MINIATURE TOGGLE SWITCHES

Quality ultra-small toggle switches combining high current capacity and long life in a miniature package. The small case size makes them ideally suited for miniaturized equipment where front, and rear of panel space is limited. There are two mounting styles: bushing mounted, and right angle PC mounted. All standard terminals have coin silver contacts and terminals. PC, right angle PC, and wire-wrap terminals have gold contacts and terminals.
Most models UL listed. File E53864.

SPECIFICATIONS—ELECTRICAL

Current Rating: Coin silver contacts 5 Amperes resistive load at 120 VAC or 28 VDC, or 2 Amperes at 250 VAC. Brass contacts with gold over nickel plate 0.4 Volt-Amperes at 20 Volts maximum (AC or DC).

Contact Resistance: 10 milliohms maximum initial at 2 to 4 VDC, 100 milliamps for both silver and gold-plated contacts.

Insulating Resistance: Over 1000 megohms between terminals and case ground at 500 VDC.

Dielectric Strength: 1000 VAC between terminals and case ground for a duration of 1 minute.

Electrical Life: 100,000 (40,000 on momentary types) on-off, switching actions at rated current.

SPECIFICATIONS—MATERIAL

Case: Black phenolic resin.

Toggle: Brass, chrome plated.

Bushing: Brass, nickel plated.

Housing: Stainless steel.

SPECIFICATIONS—CONTACTS

STANDARD TERMINALS AND CONTACTS:

End Terminals: Contact surface—coin silver; Body—coin silver or brass, silver plated.

Center Terminal: Contact surface—brass or zinc, silver plated; Body—brass or zinc silver plated.

PC TERMINALS:

End Terminals: Contact surface—brass with 50 millionths minimum gold plate, over 200 millionths nominal nickel plate; Body—brass with 50 millionths minimum gold plate, over 200 millionths nominal nickel plate.

Center Terminal: Contact surface—brass or zinc with 50 millionths minimum gold plate, over 200 millionths nominal nickel plate; Body—single pole model. Brass with gold plate over nickel plate. Two, three and four pole models-brass, silver plated, or zinc, gold plated.

WIRE-WRAP AND RIGHT ANGLE PC TYPES:

End Terminals: Contact surface—brass with 50 millionths minimum gold plate, over 200 millionths nominal nickel plate; Body—brass with 50 millionths minimum gold plate, over 200 millionths nominal nickel plate.

Center Terminal: Contact surface—brass with 50 millionths minimum gold plate, over 200 millionths nominal nickel plate; Body—brass with 50 millionths minimum gold plate, over 200 millionths nominal nickel plate.

HARDWARE SUPPLIED

Flatted toggle: one N-3 dress nut, one N-2 hex nut, one standard locking ring;

Right angle toggle: none (has non-threaded bushing);

All other toggles: two N-2 hex nuts, one standard locking ring.

BUSHING MOUNTED

Four toggle styles are available: standard length bat, long bat, long plastic bat, and flatted toggle. The flatted style is supplied with a special dress mounting nut (N-3). Solder lug, PC pin, or wire-wrap (R) terminals are available on some styles. Not all combinations of switch size, toggle style, and terminals are available. See chart on page 5.

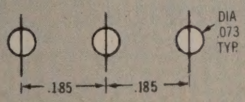
HARDWARE NOT SUPPLIED

PC MOUNT VERSION



PANEL AND PC MOUNT—SERIES S1

These subminiature slide switches have the same toggle-action mechanism as used in the Raytheon toggle switches. A spring-loaded teflon actuator operates the mechanism. The standard version can handle 6 Amperes resistive at 120 VAC or 20 VDC (3 Amperes at 250 VAC). A low energy version Model S1A2M2 has gold plated contacts for levels as low as 0.4 Volt-Amperes at 20 Volts maximum (AC or DC). Panel mounting or PC board mount models are available. A black slide handle is provided, unless otherwise specified on special order; see Table 1. Terminals on panel mount style are solder-lug.

SPECIFICATIONS

Contact Rating—Standard Version: 6 Amperes with resistive load at 120 VAC or 28 VDC; 3 Amperes at 250 VAC.
Contact Rating—Low Energy Version: 0.4 Volt-Amperes at 20 Volts maximum; AC or DC.
Contact Resistance: 10 milliohms maximum initially.
Electrical Life: 40,000 actuations at full load.
Mechanical Life: 250,000 actuations (low energy).
Insulation Resistance: 100,000 megohms minimum.
Dielectric Strength: 1000 Volts RMS at sea level.
Actuation Force: 150 to 350 grams initially.

MATERIALS

Case: Melamine.
Housing: Stainless steel.
Slide Handle: Nylon.
End Contact—Standard Version: Coin silver, silver plated.
End Contact—Low Energy Version: Brass with 50 millionths minimum gold plate over 200 millionths nominal nickel plate.
End Terminal: Brass, silver plated.
Center Contact and Terminal—Standard Version: Brass, silver plated.
Center Contact and Terminal—Low Energy Version: Brass with 50 millionths minimum gold plate over 200 millionths nominal nickel plate.

BUSHING MOUNTED SNAP-ACTION—SERIES P

These momentary snap-action switches are especially recommended for low energy circuits because of their gold-on-brass contacts. The solder-lug terminals are epoxy sealed. Two sizes of snap-on nylon caps are available in a choice of colors. The switches can be wired for either normally open or normally closed operation. SPDT and DPDT.

SPECIFICATIONS

Common Contact: Brass with gold plate over nickel.
Center and End Contact: Precious metal inlay on brass, gold plated.
Contact Rating: 1 Ampere resistive load at 120 VAC or 28 VDC.
Terminals: Gold over brass terminals, epoxy sealed.
Insulation Resistance: 1000 megohms minimum.
Dielectric Strength: 1000 Volts RMS at sea level.
Electric Life: 60,000 cycles minimum at full load.
Mechanical Life: 100,000 make and break cycles, minimum.
Maximum Allowable Force on Plunger: 10 pounds.

MATERIALS

Case: General purpose phenolic.
Housing: Stainless steel.
Bushing: Cadmium with clear chromate over brass. High torque to withstand 12 inches per pound.
Hardware: Two hex mounting nuts, one internal tooth lockwasher, one locking ring.

BUSHING MOUNTED BUTT CONTACT—SERIES MP

These tiny, low cost switches, just over 1 inch long, can carry 1 Ampere at 28 VDC. Butt contacts for simple, reliable operation. Standard terminal is solder-lug. Black phenolic plunger. SPST only.

SPECIFICATIONS

Contacts: Coin Silver.
Contact Rating: 1 Ampere resistive load at 120 VAC or 28 VDC or 0.5 Ampere at 250 VAC.
Terminals: Coin Silver.
Insulation Resistance: 20,000 megohms minimum.
Dielectric Strength: 1000 volts rms at sea level.
Initial Contact Resistance: 10 millohms, maximum.
Electric Life: 1,000,000 make and break cycles.
Total Plunger Travel: MP1F1 = .110 includes .020 minimum over travel. MP1E1 = .055 includes .020 minimum pre travel.
Actuation Force: 8 ounces ± 4.
Case: Diallyl Phthalate (DAP).
Bushing: Brass, cadmium plated with clear chromate finish.
Hardware: 1 Hex mounting nut; 1 internal tooth lockwasher.
Mounting Hole: ¼ inch diameter.

RAYTHEON PUSH BUTTON SWITCHES

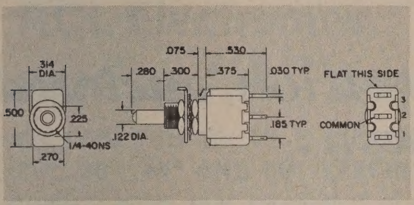
BUSHING MOUNTED 6 AMP, SERIES 6P

These snap action bushing mounted switches have a 6 Amp rating at 120 Vac. Standard solder lug terminals. Two versions available: momentary, and alternate action.

ORDERING INFORMATION

Model No.	Contacts	Description	Caps*
6P1K1	SPDT	Alternate Action	C7, C8
6P1F1	SPDT	Momentary	C7, C8

*There is a choice of colors available in either style. See Table I page 8. Specify color and style.



SPECIFICATIONS

Contact Rating: 6 amps with resistive load @ 120 VAC or 28 VDC; 3 amps with resistive load @ 250 VAC.
Contact Resistance: 20 milliohms max. initial @ 2-4 VDC, 100 milliamps for both coin silver & gold plated contacts.
Insulation Resistance: 1,000 megohms min.
Dielectric Strength: 1,000 volts RMS @ sea level
Electrical Life: 100,000 operations at full load
Operating Force: 2.5 pounds

MATERIALS

Case: Melamine
Bushing: Brass, nickel plated
Housing: Stainless steel
Plunger: Nylon
End Contact: Coin silver, silver plated
End Terminal: Brass, silver plated
Center Contact & Terminal: Brass, silver plated
Hardware: Nut—Brass, nickel plated
Locking Ring—Brass, bright nickel plated
Lockwasher—C.R.S., bright nickel plated

SNAP-IN ALTERNATE ACTION 6 AMPERE—SERIES 6P

This miniature snap-in pushbutton has a pushbutton cap less than ½ inch square. Yet the switch can carry a big load—6 Amperes at 120 VAC. An attractive front panel bezel can be color coordinated with the cap, both being available in a choice of colors. The alternate action, push on-off feature, is an added plus in a switch of such a small size. SPDT configuration only. Standard solder-lug terminals. Switch is held firmly in place in panel by spring steel clips. Front panel mounted.

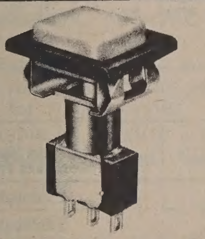


TABLE 1

*Other colors available. See Table 1. Specify color required.
**Sequence depends on wiring.

SPECIFICATIONS

End Contact: Coin silver, silver plated.
End Terminal: Brass, silver plated.
Center Contact and Terminal: Brass, silver plated.
Contact Rating: 6 Amperes with resistive load at 120 VAC or 28 VDC; 3 Amperes with resistive load at 250 VAC.
Insulation Resistance: 1000 megohms minimum.
Dielectric Strength: 1000 Volts RMS at sea level.
Initial Contact Resistance: 20 milliohms maximum at 2 to 4 VDC.
Electrical Life: 100,000 operations at full load.
Operating Force: 2.0 pounds.

MATERIALS

Case: Phenolic resin.
Housing: Stainless steel.
Spring: Steel, nickel plated.
Bezel: Nylon.
Cap: Nylon.
Bracket: Stainless steel.

SNAP-IN SNAP-ACTION SERIES P-J81

These snap-action pushbutton switches mount from the front of the panel, snapping into place and held by nickel plated spring steel clips. The pushbutton cap is less than ½ inch square. Both cap and bezel can be color coordinated by selecting from the available colors; see Table 1. A white cap with a black bezel is supplied, unless otherwise specified. Terminals are solder-lug and are epoxy sealed. Both bezel and cap are nylon. The switches can be wired for either normally open or normally closed operation. SPDT and DPDT.

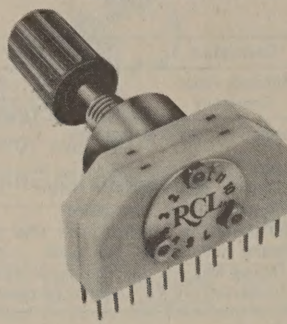
RCL Electronics

"X" switches

series "X30" 12 position, enclosed molded pc switches...



ONLY RCL OFFERS THESE EXCLUSIVE FEATURES:

- An exceptionally sturdy miniature switch with adjustable stops, as standard, designed for insertion into printed circuit boards. Engineered to withstand unusual stress and strains.
- Provides the ultimate in reliability as soldering is completely eliminated.
- Behind panel stickout is .687″ (17.46mm) for 1 deck and .300″ (7.62mm) for each additional deck.
- Eliminates all point to point wiring-labor costs.
- Sells at lower cost than old-fashioned open deck wafer switches.
- Up to 12 active positions per deck — shorting or non-shorting, with 30° spacing.
- On any one deck of a multi-pole switch a variety of combinations of shorting (MBB) and non-shorting (BBM) actions may be obtained. For example, a six pole switch may be ordered with 4 poles — shorting action, and 2 poles, non-shorting action.

GENERAL FEATURES:

- Adjustable stops offer maximum versatility at no extra charge. (Fixed stops optional at no extra charge.)
- Up to 12 positions per pole (30° Spacing) and as many as 6 poles per deck are available.
- Shorting and non-shorting poles may be grouped on one deck in any combination. Shorting and non-shorting positions on any one pole are also available.
- Switching elements are completely enclosed.
- Contact and lug assembly is integrally molded and completely enclosed. This eliminates the possibility of movement of contacts and terminals, and prevents flux flowing onto the contact surface during soldering or cleaning operations.
- Industry standard spacing on terminals.
- Shaft and panel seals available.

ELECTRICAL FEATURES:

- **Initial contact resistance** — .015 max.
- **Current breaking capacities:**
  250 MA — 115 VAC resistive
  250 MA — 28 VDC resistive
  125 MA — 28 VDC inductive
- **Dielectric strength (voltage breakdown)** —
  a. Between any two adjacent positions — 1000 V-RMS (60 cycles)
  b. Between any active position to ground — 1000 V-RMS (60 cycles)
- **BCD Coding Available**
- **Current Carrying Capacity** — 5.3 amps
- **Insulation Resistance** (measured at 25°C, 50%RH) — 10° megohms
- **Capacitance** — Between adjacent active contacts — .2 pF max. Between contact and common terminal — .2 pF max.

UP TO 12 DECKS ARE AVAILABLE

MECHANICAL FEATURES:

- Life expectancy — in excess of 25,000 mechanical operations. (NOTE: The actual life is determined by a number of variable factors. These include: electrical loading, environment, rate of rotation, maximum contact resistance, minimum insulation resistance, and the minimum voltage breakdown which is required at the end of the life.)
- Detent — stainless steel roller-type snaps positively from position to position. The detent housing is made of special high strength plastic, providing positive action and minimal wear. Commercial series, "Zamac" (Zinc) detent housing.
- Stop strength — Designed to withstand 10 pound-inches of torque.
- "Molded-in" terminals result in exceptionally high contact stability, completely eliminating movement.
- Terminal locations clearly marked on rear cover plate.
- Materials and Finishes:
  Rotor — Lexan
  Rotor Blade — Beryllium copper (heavy silver plated) Gold plating available — consult factory
  Detent Housing — High Grade Die Cast
  Shaft — Stainless steel

series "V" switch

AVAILABLE IN 12, 10, 8 OR 6 POSITIONS! (30°, 36°, 45° AND 60° SPACING) WITH TRUE ½" DIAMETER AND .355" LENGTH!

A totally integrated series of switches where all common angles of rotation are available in a single subminiature size (½" True Diameter x .355 length).

Overall length including terminals (total depth-behind-panel) has been significantly reduce to less than ½" (.355)!

SPECIFICATIONS:

Contact Resistance: 10 milliohms maximum initial.

Insulation Resistance: 50,000 megohms initial; 10,000 megohms minimum between mutually insulated parts.

Voltage Breakdown: 600 VAC minimum between mutually insulated parts.

Electrical Rating: Will make and break 50 milliamperes: 115 VAC for 25,000 cycles or 200 milliamperes: 115 VAC for 10,000 cycles.

Poles: Available in 1 and/or 2 poles.

Spacing Between Positions: Available with 30°, 36°, 45°, 60° Spacing.

Deck and Terminal Arrangement: Available only in one deck with terminals projecting from rear of switch.

Shaft Length, Flat and Orientation: Available in accordance with individual requirements.

Materials and Finishes: In accordance with applicable MIL specs.

Contacts: Common Terminals, Wipers: Metal alloys with characteristics consistent with performance requirements.

Environmental Requirements: Meets or exceeds MIL-S-3786.

Explosion Proof: Per paragraph 4.8.12 of MIL-S-3786.

MEETS ALL REQUIREMENTS OF MIL-S-3786/20 & 35

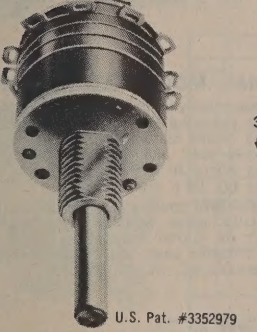
series "c" miniature rotary switches

- Up to 12 active positions per deck shorting **or** non-shorting, with 30° spacing.
- Shorting **AND** non-shorting poles may be grouped on one deck in any combination.
- As many as 6 poles per deck.
- All individual deck parts are self-contained, and are permanently molded into place.
- Available with adjustable stops.
- **MILITARY QUALIFIED TO MIL-S-3786/41 AND LISTED ON QPL**



U.S. Pat. #3352979

6	1, 3, 5, 7, 9, 11

SERIES "CC" (COMMERCIAL VERSION OF SERIES "C")

All specifications and features remain essentially the same as in the Series "C" switch. Electrical specifications are:

1. - Initial contact resistance—.015Ω max.
2. Current breaking capacities
   1/8 amp—115 V.A.C. resistive
   1/8 amp— 28 V.D.C. resistive
   1/8 amp— 28 V.D.C. inductive
3. Dielectric strength (voltage breakdown)—
   a. between any two adjacent positions—500V (60 cycles)
   b. between any active position to ground 1000V (60 cycles)

Materials and tooling are modified to reduce cost.
Priced at the same level as open frame or wafer switches.
Off-the-shelf delivery.
For ordering information see below, but indicate CC. (For example: 11-CCM-2).

ELECTRICAL FEATURES

1. Initial contact resistance — .010Ω max.
2. Current carrying capacity — 5.5 amps.
3. Current breaking capacities
   ¼ amp — 115 V.A.C. resistive
   ¼ amp — 28 V.D.C. resistive
   ⅛ amp — 28 V.D.C. inductive.
4. Dielectric strength (voltage breakdown) —
   a. between any two adjacent positions — 800 v RMs (60 cycles).
   b. between any active position to ground 1500 V (60 cycles).
5. Insulation resistance (measured at 25°C, 50% RH at sea level) — 10^5 megohms.
6. Thermal EMF — 1 microvolt/°C maximum.
7. Capacitance — between adjacent active contacts .5 PFD Max.
8. Capacitance — between contact and common terminal .9 PFD Max.

MECHANICAL FEATURES

1. Life expectancy — in excess of 50,000 mechanical operations.
2. Detent — stainless steel roller-type detent snaps from position to position. Detent housing made of special high-strength plastic, providing positive action and minimal wear.
3. Stop strength — Designed to withstand 10 pounds-inches of torque.
4. "Molded in" terminals give exceptional terminal strength, completely eliminating movement.
5. Terminal locations clearly marked on rear cover plate.
6. On any one deck of a multi-pole switch, a variety of combinations of shorting (MBB) and non-shorting (BBM) actions may be obtained.
7. Materials and finishes:
   Rotor — Lexan
   Rotor blade — Beryllium copper (silver plated)
   Contacts & solder terminals — solid silver alloy
   Housing — Diallyl Phthalate
   Stator — Diallyl Phthalate
   Shaft — stainless steel
8. One piece contact terminal construction has holes large enough to accept two #22 AWG wires.
9. Shaft and panel seal at additional cost may be specified by using prefix "S" before switch type numbers. Bushing and shaft stick-out from mounting surface is reduced by 1/16". Overall length of switch from mounting surface is increased by 1/16".
10. Explosion proof per paragraph 4, p. 12 of MIL-S-3786.

ENGINEERING NOTE
Series "A" available with above specifications but with "wrap-around" turret-type solder lugs. "Across-terminal" dimension is .820 (±.002).

ADJUSTABLE STOP VERSIONS AVAILABLE

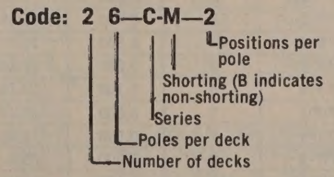
MULTI-DECK SWITCHES UP TO 12 DECKS AVAILABLE

For multi-deck version of these switches, indicate number of decks as follows. Merely change first number of coding as shown:

Number of decks	
One deck	1 1-CB-4
Two decks	2 1-CB-4
Three decks	3 1-CB-4

"M" = Shorting action (MBB)
"B" = Non-shorting action (BBM)
Supplied unless otherwise specified.

Code: 2 6—C-M—2



e.g. this is 2 decks, 6 poles per deck, Series "C" shorting action, 2 positions per pole.

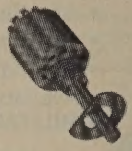
RCL Electronics

miniature rotary switches

(LOW COST COMMERCIAL VERSIONS)



Completely automated facilities and mass production tooling, now makes RCL highly competitive in commercial applications with "obsolete" wafer-type and open frame switches.

Material and tooling are modified to reduce cost, but comparable performance is maintained with our "standard" series of switches, to correspond with "instrument type" switches.

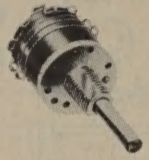
MODIFICATIONS OF ELECTRICAL FEATURES

COMMERCIAL TYPE "CC," "DC," "HC," "FC," "RC"

- Initial Contact Resistance: .015Ω max.
- Current Breaking Capacities:
  1/8 amp — 115 VAC resistive
  1/8 amp — 28 VDC resistive
  1/8 amp — 28 VDC inductive
- Dielectric Strength (Voltage Breakdown):
  a. Between any two adjacent positions — 500V (60 cycles)
  b. Between any active position to ground — 1000V (60 cycles)

COMMERCIAL TYPES "EC," "TC"

- Current Carrying Capacity: 6 amps
- Current Breaking Capacity (Rated Load at 125°C)
  1 amp — 115 VAC resistive
  3/4 amp — 28 VDC resistive
  1/4 amp — 28 VDC inductive



SPECIAL MODIFICATIONS AVAILABLE

All commercial version RCL switches are available with the following features at additional cost:

- Spring return feature (Series CC and DC only)
- "Push-to-turn" and "pull-to-turn" spring loaded action where an isolated position is required (Series CC, DC)
- Non-standard shaft and bushing lengths
- Specially coded outputs, including decimal to binary for digital applications
- 1/4" diameter shaft and 3/8"-32 threaded bushing (Series CC, DC, HC, AC only)

RCL STANDARD SERIES	RCL SERIES	BODY DIAM.	MAX. POS. PER DECK	MAX. POLES PER DECK	MAX. NO. OF DECKS

R RPC	RC RCPC	.586	12	4	1
FJ	FCJ	.524	10	3	1
RJ	RCJ	.586	12	4	1
	K	1.260	12	2	8

RCL "PIP"/DIP SWITCH

"PROGRAMMABLE IN-LINE PACKAGE" SWITCH

LOW PROFILE VERSION

STANDARD VERSION

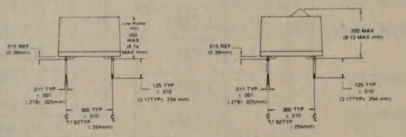
- 2-10 position decimal miniature input device
- Replaces slide switches, toggle switches, thumbwheels, etc.
- Positive detent action
- Low and uniform contact resistance
- Snap-on transparent plastic shield available
- True wiping action
- Delivery from stock
- Withstands ultrasonic cleaning
- Long life expectancy (3000 operations per rocker minimum)
- Rocker marking available for positive position identification
- Competitively priced

ORDERING INFORMATION

RCL PART NUMBER	NO. OF ROCKERS	LENGTH INCHES	LENGTH MM
PIP-2	2	0.300	7.62
PIP-3	3	0.400	10.16
PIP-4	4	0.500	12.7
PIP-5	5	0.600	15.24
PIP-6	6	0.700	17.78
PIP-7	7	0.800	20.32
PIP-8	8	0.900	22.86
PIP-9	9	1.000	25.4
PIP-10	10	1.100	27.94

- To order Protective Covers, specify RCL PIP Part Number and Covers.
- To order Low Profile Switch use Suffix "LP"

DIMENSIONS



LOW PROFILE RECESSED ROCKER VERSION

- Low Profile above PC Board .265
- Provides total security once the switches are set
- Recessed Rocker prevents accidental actuation of positions
- Can be easily sealed prior to board immersion
- Red marker available for positive position identification

The "PIP" switch may be inserted into a standard header or IC packaging receptacle without the use of any additional attachments. Flow soldering may be substituted to achieve direct mounting. Interconnecting wiring is completely eliminated.

GENERAL FEATURES

EASE OF OPERATION: Programs easily modified by manually changing position of rocker arms.

ECONOMICAL: Board mounted switches permit updating circuits without costly wiring changes.

DEPENDABILITY: Complete insulation of contact surfaces from unwanted surrounding risks.

SIZE AVAILABILITY: From 2 through 10 positions.

INTEGRATED TERMINALS: Terminals are molded into the basic switch structure, offering the ultimate in contact protection.

SMALL SIZE: Overall height will not exceed .320". Utilizes least possible P.C. board space.

WIPING BALL CONTACT: Spring loaded contacts prevent possible "opens" during normal operation, including shock and vibration. Important in logic applications.

PLASTIC DUST COVER: Available as an optional feature. Permits switch to remain in position during cleaning or soldering operations with minimum resultant contamination. Aids in prevention of accidental actuation of switch during regular day to day operations.

ELECTRICAL SPECIFICATIONS

SPST Switching: Make before break

Current Voltage Ratings:

Non-Switching	Switching
50 VDC @ 100 mA	5 VDC @ 100 mA (Typ.) 24 VDC @ 25 mA (Max.)

Contact Resistance:
100 Milliohms (Max.) after life, measured at
100 Milliamps and 5 VDC (Typ.)

Insulation Resistance (at 100 VDC):
Between adjacent open or closed switches —
1 x 10^{11} ohm (initial)
1 x 10^{9} after environmental tests

Dielectric Breakdown Voltage: Between adjacent open or closed switches — 500 VDC (Min.)

Circuit Capacitance (between adjacent switches): 5 pfd

MECHANICAL SPECIFICATIONS

Operating Temperature: −40°F thru +195°F

Shock: Per MIL-STD-202, Method 205. No discontinuity exceeding 10 microseconds.

Vibration: Discontinuity shall not exceed 10 microseconds when tested in accordance with MIL-STD-202D, Method 204, Condition C

Life Expectancy: 3000 operations per rocker (Min.)

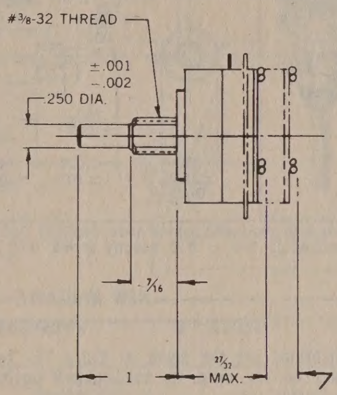
FRONT VIEW



5/16 EACH ADDED DECK

SERIES "EC" (LOW COST COMMERCIAL VERSION OF SERIES "E")

All specifications and features remain essentially the same as in the Series "E" switch. Materials and tooling are modified to reduce cost. Electrical specifications are derated by approximately 40%.

Priced at the same level as open frame or wafer switches. For ordering information see below but indicate EC. (For example: 11-ECM-2)

ELECTRICAL FEATURES

SERIES E

- Contact Resistance: .010 ohms max. initial
- Current Carrying Capacity: 10 amps
- Current Breaking Capacity:
  2 amp — 115 VAC Resistive
  1 amp — 28 VDC Resistive
  .5 amp — 28 VDC Inductive

SERIES EC

- Current Carrying Capacity: 6 amps
- Current Breaking Capacity:
  1 amp — 115 VAC Resistive
  ¾ amp — 28 VDC Resistive
  ¼ amp — 28 VDC Inductive

MECHANICAL FEATURES

- Life Expectancy: In excess of 50,000 mechanical operations
- Rotational Torque: 20 to 80 ounce-inches depending on number of poles per deck and number of decks.
- Stop Strength: 15 pound-inches.
- Solder terminals will accept two .032 diam. (AWG #20) wires.
- "Molded-in" terminals result in exceptionally high contact stability, completely eliminating movement.
- Shaft and Panel Seals at additional cost may be specified by using Prefix "S" before Switch Type Numbers. This reduces bushing and shaft stick-out from mounting surface by 1/16". Overall lengths of switch from mounting surface is increased by 1/16".
- Explosion Proof per paragraph 4.8.12 of MIL-S-3786.
- Weight: 1 Deck Switch 1.75 oz. For each additional deck add .500 oz.

ALSO AVAILABLE IN 12 POSITION VERSION AS SERIES "T" AND IN 12 POSITION COMMERCIAL VERSION AS SERIES "TC"

ALTHOUGH ONLY 1 DECK IS SHOWN FOR ILLUSTRATIVE PURPOSES, UP TO 20 DECKS ARE AVAILABLE.

Available with shortened behind panel depth of .563 max.
(Instead of .640 ± .010, specify Series "FF".)

NOW AVAILABLE

SERIES "G" 6-POSITION SWITCHES

Specifications are the same as RCL's "F" series, but with 60° throw and non-shorting only. Up to 1 pole-6 position, or 2 pole-3 position.

Available with standard solder lugs or printed circuit terminals.

½" DIAMETER

This subminiature rotary switch has been designed to offer the features of larger switches in a fraction of the space formerly required.

SPECIFICATIONS FOR BOTH "F" AND "R" SERIES

Contact Resistance: 10 milliohms maximum initial.

Insulation Resistance: 50,000 megohms initial; 10,000 megohms min. between mutually insulated parts.

Voltage Breakdown: 600 VAC min. between mutually insulated parts.

Electrical Rating: Will make and break 50 milliamperes: 115 VAC for 25,000 cycles or 200 milliamperes 115 VAC for 10,000 cycles.

Contacts: Shorting or non-shorting contacts.

Deck and Terminal Arrangement: Available only in one deck with terminals projecting from rear of switch.

Shaft Length, Flat and Orientation: Available in accordance with individual requirements.

Materials and Finishes: In accordance with applicable MIL specs.

Contact Terminals: Solid silver alloy gold plated. Will accept Two #22 AWG wires.

Common: Terminal brass gold plated.

Wipers: Solid silver alloy.

Environmental requirements: Meets or exceeds MIL-S-3786. Explosion proof per paragraph 4.8.12 of MIL-S-3786.

A subminiature rotary switch with adjustable stops... permits the user to vary the number of positions!

FEATURES

- **From 2 to 10 positions available merely by moving external plate!**
- **Shorting or non-shorting action available.**
- **As many as 3 poles possible on one deck!**
- **Instant switching to any desired number of positions.**
- **Available with P.C. terminals. To order use Suffix P.C.**
- **Permits stocking of a minimum number of switch types.**
- **Ideal for breadboard setups and prototype work — where rapid circuit modification may be desired.**

This switch is furnished with one internal fixed stop and one external adjustable stop plate. This permits adjustment of the number of positions.

Adjustments are made merely by rotating the external adjustable plate until its integral stop tab passes through the proper hole in the switch front plate.

RCL Electronics

keylock switches

SERIES CC, DC, HC, FC, RC

Provides maximum security by permitting operation only by authorized personnel.

Adaptable to most RCL commercial style miniature rotary switches (6 to 12 positions).

Specifications: 8 tumblers . . . 7/8" diameter . . . Double bitted lock. Operation by double sided flat key . . . 2 provided. Secured by nut at rear of panel to prevent unauthorized loosening or dismounting.

CONFIGURATIONS

STANDARD KEY WITHDRAWAL POSITIONS

Available With Key Removal Only at Position Indicated.

Engineering Note: All Configurations Available For Key Withdrawal In Every Position. Contact Factory. Special 2, 3 or 4 key lock Switches available to provide limited access on different levels of authority. Consult factory.

ORDERING INFORMATION

To order Keylock Modification, use prefix -001

EXAMPLE:

To order CC Type Switch (Commercial Version) 2001-11-CCM-2
(2 position, single pole, single deck with keylock)
(4001 would indicate 4 position Key Withdrawal — available only in 12 position switch)

Refer to RCL miniature Rotary Switch Catalog for complete ordering information on all series of switches.

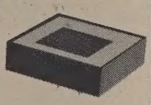
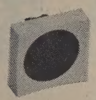
PRODUCTS OF:
REFAC electronics corporation
DEPT. EM, P.O. BOX 809, WINSTED, CT 06098 (203) 379-2731

TOUCH SWITCH FEATURES

- Extremely fast turn-on and turn-off.
- Very low transient noise.
- Exceptionally rugged construction for long life and ease of handling during assembly.
- Economical design. Simple to mount.
- Clean, contemporary graphics to accent highly functional packaging.
- Unique ability to handle inductive loads as well as dry circuits or low level applications with ease.
- Optional legendizing.





Part No.	Description	Rating	Contact Form	Contact Resistance	Operating Force	Life	Temperature Range	Terminal Type	Nom. Weight	Dimensions	Touch Plate Dimension	List Price

SPECIFICATIONS

ELECTRICAL

Current Ratings: Carry — 10 amps, continuous
Make and Break, 2 amps up to 120 VAC or up to 30 VDC at 10,000 and 20,000 cycles respectively.
Higher loads may be switched with shorter life.

Contact Resistance: .003 ohms max., initial
.010 ohms max., end of life

Insulation Resistance: > 10^{14} ohms

Voltage Breakdown: Between Poles — 2,000 V. RMS
Between Contacts — 1500 V. RMS
Between Decks — 6,000 V. RMS
Circuit to Frame — 3,000 V. RMS

MECHANICAL

Terminal Strength: Withstands 5 lbs. pull.
Detent: Star wheel type
Stop Strength: Withstands 50 in-lbs.
Mounting: 2 hole type, see outline drawings.
Construction: Open frame type

MATERIAL

Current Carrying Parts: Solid Silver-Alloy
Terminals: Turret type capable of attaching two 20 AWG wires. Terminals are integral with contacts.
Decks: Glass Epoxy per Mil-P-18177
Detent and Shaft Assembly: Stainless Steel

ENVIRONMENTAL

Temperature Range: Commercial, —40°C. to +85° C. Military, —65°C. to +125°C.
Other: Designed to meet the general requirements of Mil-S-3786.

Shigoto Switches— perfect as nature.

Nature seldom makes mistakes. Likewise Shigoto. You get fewer out-of-tolerance switches from us. And, because we control manufacture from design to delivery, you get them when you want them. Any way, shape or form you want them. Shigoto *has* to save OEM's production dollars. Naturally! We make a living helping you make money.

Some of the standard items in the Shigoto switch lineup:

- slide type
- toggle
- rocker type
- snap action
- lever type
- illuminated
- keyboard
- rotaries
- thumb wheel
- P.C. board type
- knife type
- limit type
- ganged
- reed type
- key lock
- foot pedal

Perfect switches for big savings.
Naturally, from Shigoto.
Write for our catalog today.

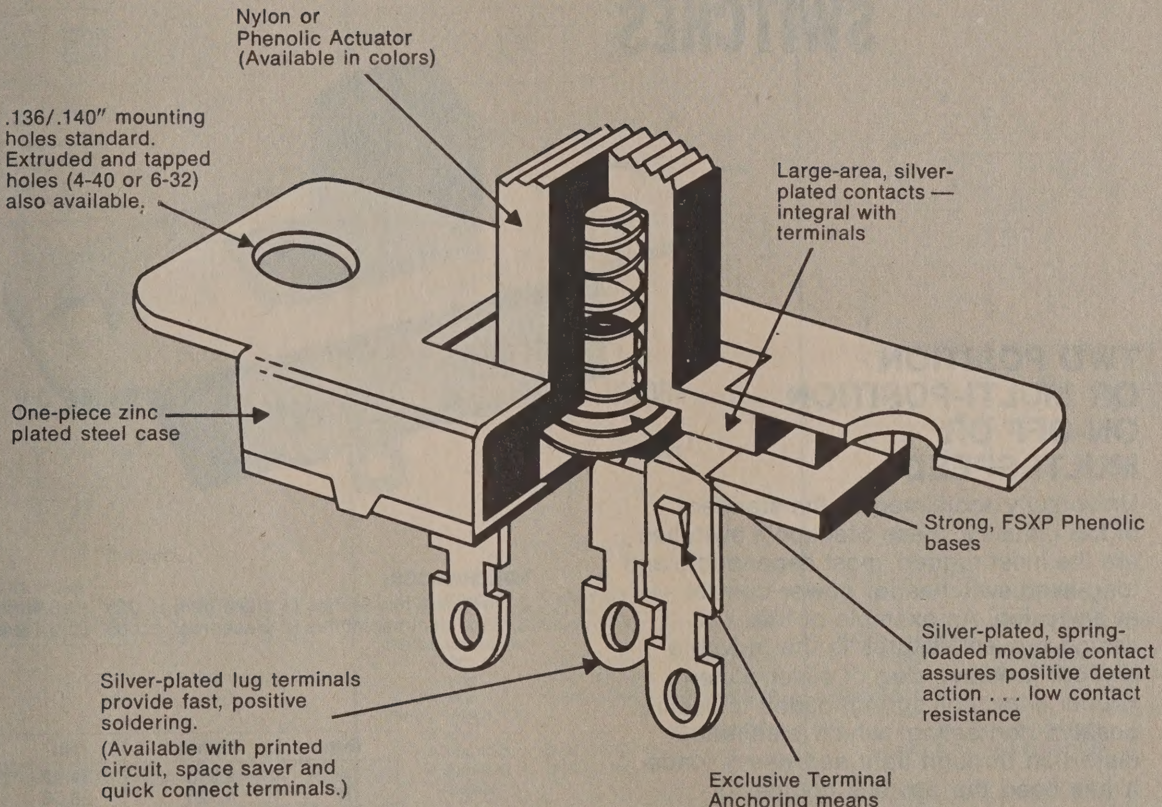
... THE INSIDE STORY



Nylon or Phenolic Actuator (Available in colors)
.136/.140″ mounting holes standard. Extruded and tapped holes (4-40 or 6-32) also available.
Large-area, silver-plated contacts — integral with terminals
One-piece zinc plated steel case
Strong, FSXP Phenolic bases
Silver-plated, spring-loaded movable contact assures positive detent action . . . low contact resistance
Silver-plated lug terminals provide fast, positive soldering.
(Available with printed circuit, space saver and quick connect terminals.)
Exclusive Terminal Anchoring means

For over 35 years, Stackpole switches have been noted for quality. This reputation stems from the basic design and is continued through the use of carefully selected raw materials fabricated on the most modern high volume production machinery in existence.

Our rigid silver plated sliding contact as featured on Series 10 and 20 switches is coil spring loaded. The contact does not flex. This is definitely advantageous in high current applications.

The terminals in all switches are locked to the base either by swaging or with a lance, to prevent push-through during assembly. These are but a few of the hidden features which make Stackpole the number one choice in applications requiring low cost switches.

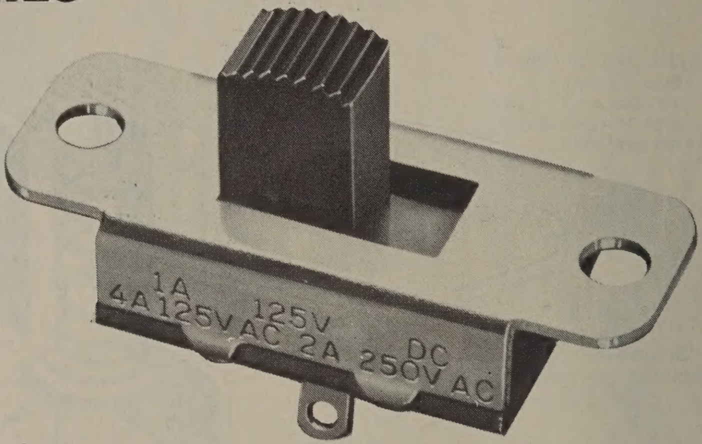
BASIC SINGLE-POLE SWITCHES



TWO POSITION OR MULTI-POSITION ON-OFF OR MULTI-SPEED

Universally acclaimed as the standard of the industry, these Stackpole switches are the most rugged, most dependable and long-lived switches for power control — at any price. An example of the design-proven features is the movable contact (a heavy slug of silver-plated copper alloy, coil spring-loaded to assure positive contacting) which eliminates distortion through light and heavy loads. It has been the obvious choice for thousands of applications and proven through the hundreds of millions of Stackpole switches in customer use today.

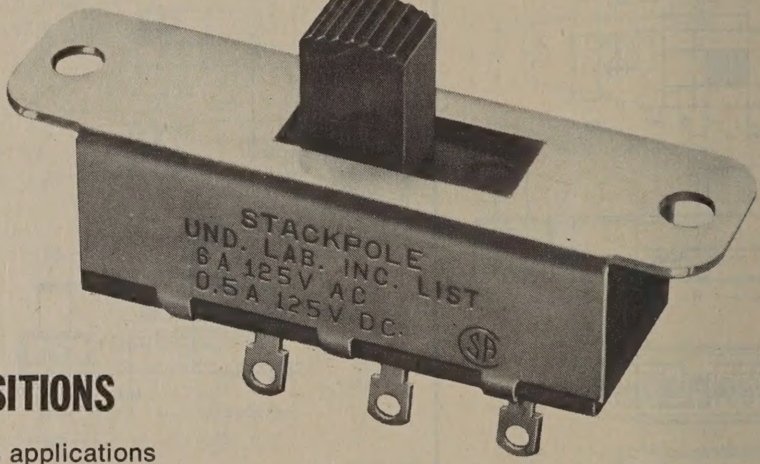
MULTI-POLE, LARGE-CASE SWITCHES



TWO-
THREE-
FOUR-POSITIONS

For the numerous applications where multi-poles and the allied Stackpole rugged features are required, these switches offer the designer/engineer the same superior quality and design excellence as the basic single-pole switches; the highly acclaimed coil spring-loaded slug contact, the lance-anchored, wrap-around terminal and the numerous Stackpole options and accessories.

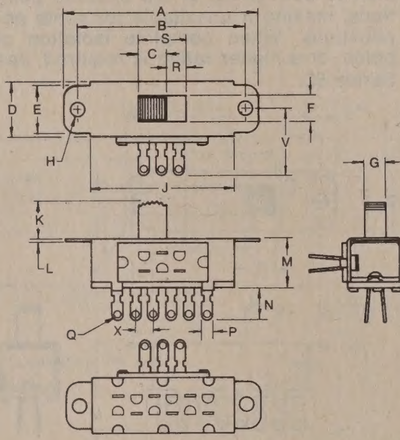
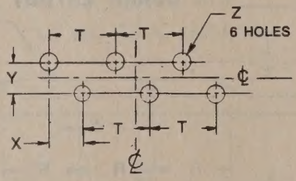
TRIPLE-POLE, DOUBLE-THROW

(CONTROL FOR THREE CIRCUITS)

Rugged circuit control allows three isolated double-throw switching functions in one package. Either maintained or spring-return versions. Available to 6 amps.



P.C BOARD LAYOUT



125 VAC UL & CSA RATING	PART NO.
Maintained Action 6 amp.	S-1132SD06-O

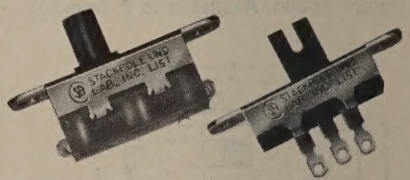
OPTIONS FOR

ACTUATORS

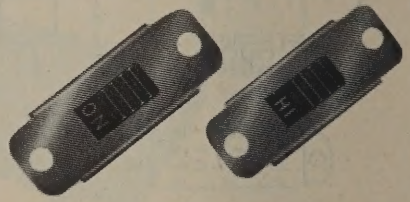
Standard: The .34″ (8.6mm) high actuator is our standard in phenolic or nylon materials. Non-standard heights from .22″ (5.6mm) to .75″ (19.0mm) in various colors are available in production quantities.

Non-Standard Shapes: Stackpole is often called upon to complement a special design by altering the actuator of a switch. Round, screwdriver slots or any shape required to accommodate your design can be made available.



STACKPOLE LAB. INC. LIST
STACKPOLE LAB. INC. LIST

Lettering, such as ON-OFF, HIGH-LOW, can be hot stamped in various colors on that portion of the knob exposed in the switch window. Consult the factory for available stamps.



GLAMOUR CAPS

Available in a variety of colors. Press-fit to a standard slide switch actuator for easy, fast assembly.

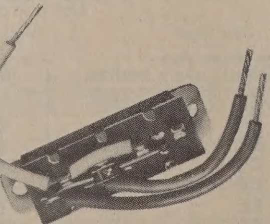
WELDED LEADS

Switches can be supplied pre-wired (18 or 20 gauge leads) or with preassembled components (diodes, resistors) to assist in production handling. Consult factory for details.



MOUNTING

All switches are supplied with .138" (3.51mm) diameter mounting holes. Optional mounting holes available include extruded #4 or #6; or extruded and tapped 4-40 or 6-32.

For PC mounting, the extended mounting ears can be removed from the switch. Twist-tab mounting is available on the complete line of single-pole, two position & Series 20 three position slide switches.

ROCKER VERSIONS

Most Stackpole slide switches are available as rocker switches. For mounting and rocker selection see pages 4252 and 4253 of this catalog.

Special base materials, case plating, actuator materials and precious metal contacts are available on most rocker switches.

Stackpole is often called upon to design switches to meet customer's special specifications. Please contact factory for your needs.

SPECIAL DETENT

The "feel" or operating force can be altered on Stackpole switches to meet customer requirements. If standard switches do not provide desired results, please contact factory for alternatives.

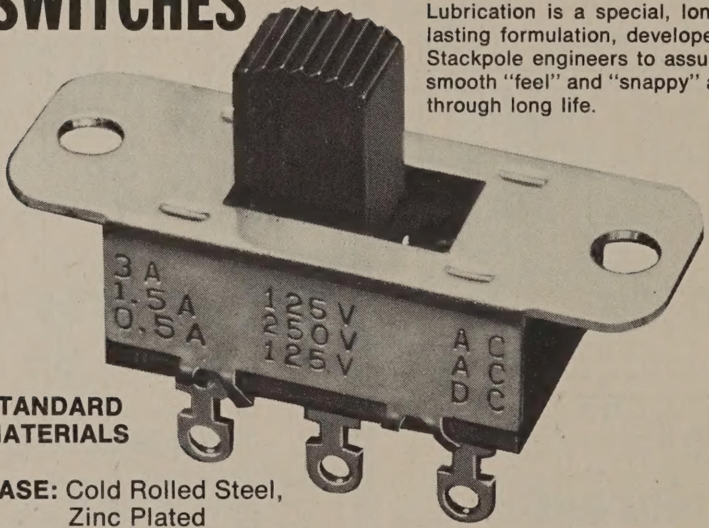
BASIC DOUBLE-POLE SWITCHES

SIMPLE TWO-CIRCUIT SWITCHING

These famed Stackpole switches are mass produced with many unique design features. The terminals are firmly anchored in the base by a swaging process which assures that they will not loosen or shift, even after rugged use. Terminals are silver-plated copper alloy, heavier than that found in any similar product. Lubrication is a special, long-lasting formulation, developed by Stackpole engineers to assure a smooth "feel" and "snappy" action through long life.



STANDARD MATERIALS

CASE: Cold Rolled Steel, Zinc Plated
BASE: Fibre surfaced XP Phenolic Laminate
ACTUATOR: Phenolic or Nylon, Black
TERMINALS: Copper Alloy, Silver Plated
SLIDING CONTACT: Silver Clad Phos. Bronze (Except S-5224XD11-U)

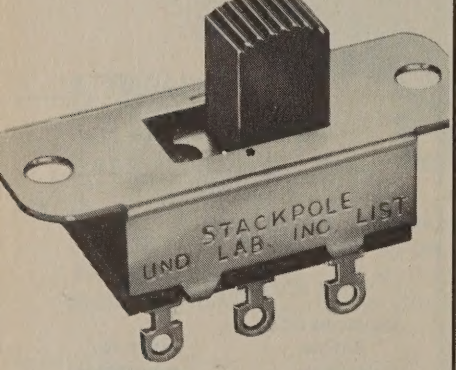
BASIC DOUBLE-WIPE CONTACT SWITCHES

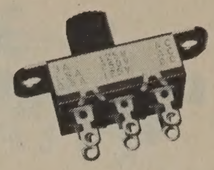


PREFERRED IN MODERN INSTRUMENT APPLICATIONS

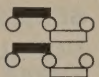
Stackpole engineering sets the standard for switch precision in double-wipe contact switches for dry circuit applications (low voltage and current). Specifications, such as low contact resistance over long life with provision for either shorting or non-shorting contacts, are provided in a design which utilizes redundant contacting by virtue of double-wipe contacts.

STANDARD MATERIALS

CASE: Cold Rolled Steel, Zinc Plated
BASE: Fibre Surfaced XP Phenolic Laminate
ACTUATOR: Phenolic or Nylon, Black
TERMINALS: Copper alloy, Silver Plated
SLIDING CONTACT: Silver Clad Phos. Bronze



SERIES S-70
BASIC "ON-OFF" SWITCH



Available in double-pole and single-pole (one row of terminals removed to provide single-pole operation). Ideal instrument "ON-OFF" switch. Available to 1 amp.

TOLERANCES - PG. 4234

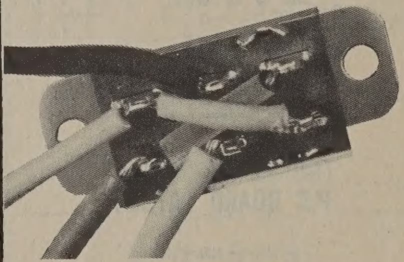
WELDED LEADS

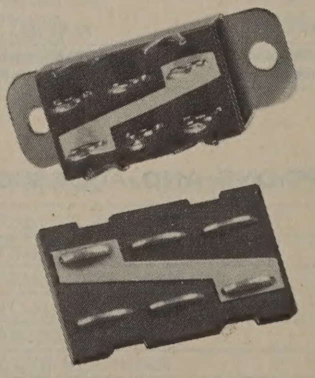
Switches can be supplied pre-wired to assist in production handling —



JUMPER STRIPS

Double-pole, double-throw switches can be supplied with reversing jumper strips to reverse polarity in a circuit.

(**Note:** For UL or CSA applications a solder guard is required.)



MOUNTING

.138 (3.51mm) diameter mounting holes are standard on all switches. Number 4 and number 6 extruded or number 4-40 and number 6-32 extruded and tapped mounting holes are available in production quantities on most switches. Twist-tab mounting is available on Series 50, 51, 55, 70 and 71 switches. See page 4241 for details.

TERMINAL SHIELDS

Snap-on nylon shields to meet UL-94V-2 requirements are available for Series 50 and 70 switches.

ROCKER VERSIONS

Series 50, 55 and 70 switches are available as rocker types. See pages 4252 and 4253 for illustrations.

Special base materials, case plating, actuator materials and precious metal contacts are available on most rocker switches.

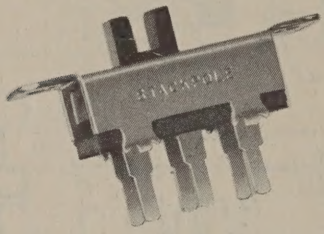
OPTIONS FOR MINIATURE SWITCHES

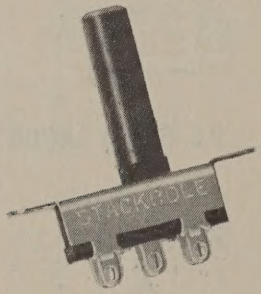
ACTUATORS

Standard is .19″ (4.8mm) high, black nylon actuator. Non-standard lengths and colors are available in production quantities. Please consult factory. (Actuators can be supplied with white or red dot to indicate "ON-OFF".)

Non-Standard Shapes: Stackpole is often called upon to complement a special design by altering the actuator of a switch. Round, screwdriver slot, or any shape required can be supplied.



Contact factory for decorative caps on miniature slide switches.



MOUNTING

.100″ diameter (2.54mm) clearance mounting holes are standard. Also available in production quantities are #4 extruded or 4-40 extruded and tapped mounting holes.

DETENT

Heavy detent is available on most miniature switches—specify as required.

SERIES S-98 SPECIAL MOUNTING

Ideal for rigid PC board mounting.

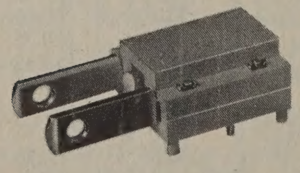
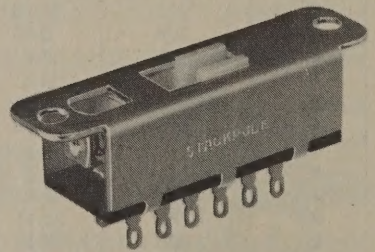
STACKPOLE CUSTOM SWITCHES



1. AC BLADE SWITCH

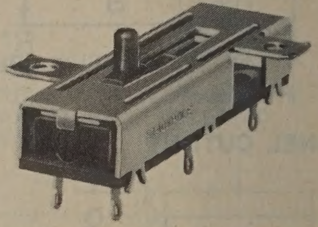
This switch was designed for use in a rechargeable battery pack.

When the switch is plugged into an AC receptacle, the switch permits the battery to charge. When plugged into the power tool, a probe in the tool shifts the switch, providing battery power to be made available to the tool.



2. FOUR-CIRCUIT MICROPHONE SWITCH

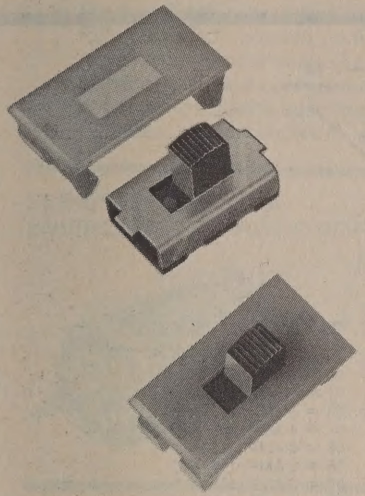
Compact and rugged, this four-pole, two-position switch with spring-return is used as a function switch offering multiple circuit capability necessary for CB mike applications.



3. HIGH SEPARATION SWITCH

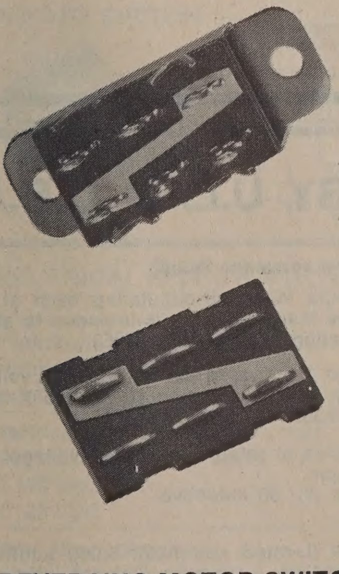
Video game manufacturers satisfy FCC separation requirements with a simple, low-cost slide switch. This specially designed double-pole, double-throw switch accomplishes a signal separation in excess of 60 decibels between the inputs and outputs of the switch (separation is measured at approximately 70. MHz). The switch is supplied with or without a grounding tab.

STACKPOLE CUSTOM SWITCHES



4. SNAP-IN MOUNTING

Simple attachment of a special nylon plate to a slide switch provides an effective, economical means of mounting the switch to a housing. The "adaptor" can be supplied with Stackpole two position Series 20, 22 or 25 switches. The "adaptor" with switch assembled is merely snapped into the opening of a housing, eliminating screws, rivets and other mounting hardware.



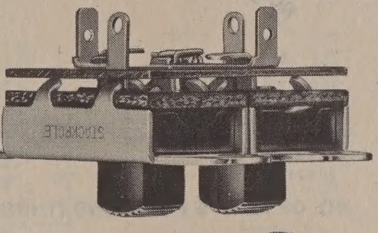
5. REVERSING MOTOR SWITCH

Reversing circuitry is accomplished by attaching a brass strip to each side of the base, mechanically attached by the staking of terminal to base.

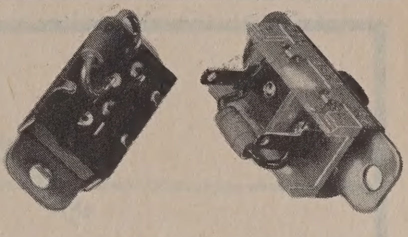
This construction eliminates the need for external cross-jumpering by soldering wire leads and allows for the space needed, if quick connectors are used.

6. DOUBLING THE SWITCHES CAN HALVE THE COST

By ganging two slide switches, Stackpole saves this customer the time required to make two additional solder connections in the unit. Ganging can also solve complex switching function problems efficiently. This single operating knob controls the "ON-OFF" of two separate functions in a floor polisher.

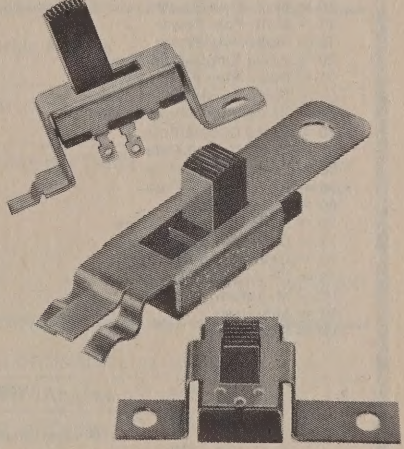


WET PICKUP
SCRUB
POLISH
SHAMPOO
OFF



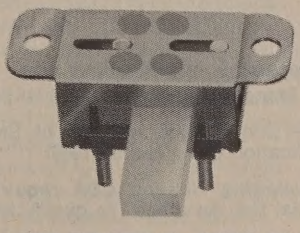
7. MULTIPLE SPEEDS ECONOMICALLY

Attaching diodes to slide switches to accomplish two-speed operation becomes even more attractive when the switch provides a terminal with enough room to attach a quick connector. Stackpole switches are listed by UL and CSA with diodes attached.



8. SPECIAL MOUNTING — NO PROBLEM WITH STACKPOLE INGENUITY

Remarkable flexibility can be built into every Stackpole slide switch by simply modifying the case. Difficult for you? Easy for us. Consult Stackpole for help on those unusual design problems.



9. LOW-PROFILE, SIDE-SLIDE MINIS

Available in single- and double-pole, two-position, this side-actuated switch is ideal where space is at a premium. Available with standard printed-circuit and standard solder-lug terminals, this low-profile mini-switch offers high reliability at low cost.

All information as contained on our product sheets is provided in good faith and is based on Stackpole's experience and testing programs. These recommendations are non-binding and do not absolve customers from their responsibility for checking the suitability of our products for their particular applications. Equally, such recommendations are not to be regarded as authorizing use of our products in contravention of any patent rights, and no liability is accepted by Stackpole for patent infringement.

THE STACKPOLE SWITCH NUMBERING SYSTEM

All Stackpole Switches are assigned a number to help you identify the item you desire. This number will also help speed your product through UL and CSA listing when applicable.

STACKPOLE SWITCHES ARE LISTED BY U.L. & C.S.A.

UL AND CSA REQUIREMENTS

OUR FILE NUMBERS ARE: UL E10809
CSA LR3969

The applicable specifications are:

UL — Standards for Safety, SPECIAL-USE SWITCHES, UL-1054

CSA — Construction and Test of, SNAP SWITCHES, Specification C22.2 No. 55-1957.

The following UL and CSA requirements must be met by "Special Use Switches" to qualify for UL and CSA listings.

I. General Requirements

1. Minimum air gaps (across a surface or through air) between live and dead metal parts or between live parts of opposite polarity — 3/64″ minimum for ratings of 250 V or less.
2. CSA requirements are the same as for UL except that the air gap between live and dead metal parts at the wiring terminals must be 3/32″ minimum for all applications except radio devices and 1/8″ minimum for radio devices.

II. Test Conditions (in the sequence listed)

1. Mold Stress: 300 hours in an air-circulating oven at the maximum temperature that the switch is intended to attain in the end-use application (typically 50-105°C).
2. Overload: 50 cycles at 1.5 X rated current at rated voltage for ampere ratings up to and including 10 A (1.25 X rated current for ratings greater than 10 amperes).
3. Endurance: 6,000 cycles at rated current and voltage at a cycling rate of 6-10 cpm.
   a. AC — power factor .75/.80 inductive
   b. DC — resistive
4. Continued Endurance (L-rated switches): 6,000 additional cycles at rated current on a tungsten-filament lamp load at 120 VAC.
5. Temperature Rise: Temperature rise is taken as close to the body of the switch as possible with thermocouples soldered directly to the switch terminals. The current used is the maximum ampere rating of the switch. Maximum permitted temperature rise is 30°C.
6. Dielectric Test: 1000 V RMS, 60 Hertz for 1 minute between
   a. live and dead metal parts
   b. live metal parts of opposite polarity
   No failures at any step are permitted.

STACKPOLE®

ROTARY SWITCHES

Stackpole rotary switches combine the high reliability of fully enclosed, modular construction with economy and a wide range of off-the-shelf options. Three separate series provide sizes and configurations to meet any application need. For complete specifications of standard rotary switches, request Bulletin 73-108.

ADVANTAGES

All series feature totally enclosed designs, seal out dirt, moisture and corrosion, seal in lubrication. Rugged, torsionally rigid assemblies withstand rough usage. Series 100 conforms to MIL-S-3786 for shock, vibration and explosion-proofing.

Series 80 has 13/16" x 9/16" body with in-line pins, ideal for either PC board insertion or hand solder applications.

DELIVERY

Fastest in the industry. Within two weeks for standard configurations, within three weeks on specials (samples in 2-3 days). Request Bulletin 73-108 for information and method of specifying custom-design switches.

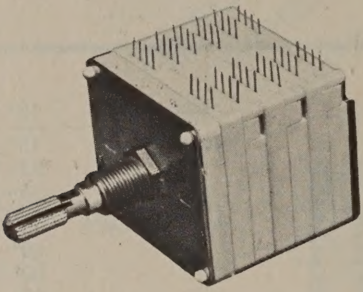
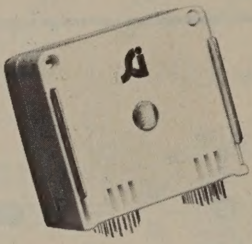
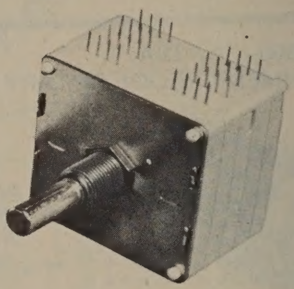
P/REL™ STANDARD GRIGSBY'S NEW PROGRAMMABLE ROTARY ENCODED LOGIC SWITCH

- Fully programmable up to 60 detent positions





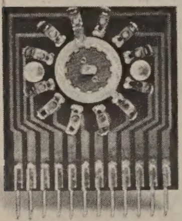


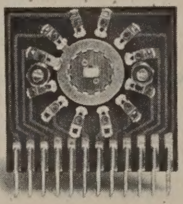
ELECTRICAL RATINGS

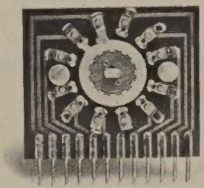
Current Carrying Capacity	.25 amp @ 115 VAC
Resistive Load	.125 amp @ 115 AC
Contact Resistance	initial 0.10 ohm maximum
Insulation Resistance	100 megohms
Dielectric Strength	500 VAC minimum
Contact Life	25K cycles of 720° (50K cycles of 360°)

Operating Force	14 to 24 inch oz. standard
Temperature Ranges	-55°C to +85°C
Insulation	Molded Valox 310
Programmable Disc	Plated Copper clad laminate
Contacts	Plated spring tempered material
Front Plate and Shaft	Cold rolled steel cadmium plated
Bushing	Brass, aluminum or die cast zinc

NEW SM-PCB ROTARY SWITCHES







- Three profile heights .625", .742", .875"

Current and Voltage Ratings: Resistive Load.
Brass silver plated, make and break:

.550 amp at 28 VDC	.170 amp at 115 VAC RMS
135 amp at 100 VDC	.8 amp at 24 VAC RMS

Coin silver alloy, make and break:

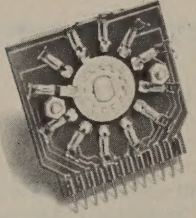
1.10 amp at 28 VDC	.335 amp at 115 VAC RMS
.27 amp at 100 VDC	1.6 amp at 24 VAC RMS

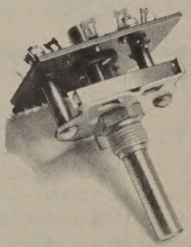
Current Carrying Capacity:
Brass silver plated - 2 amp Coin silver alloy - 2 amp

Dielectric Stength: 750 VAC between critical parts and ground.

Contact Resistance: (Path resistance not included).
Silver plated parts - average initial 5 milliohms.
Coin silver alloy parts - average initial 3 milliohms.

SK-PCB





- Available in standard .875" profile height

Current and Voltage Ratings: Resistive Load.
Brass silver plated, make and break:

1.5 amp at 28 VDC	.230 amp at 115 VAC RMS
.22 amp at 100 VDC	1.75 amp at 24 VAC RMS

Coin silver alloy, make and break:

.34 amp at 100 VDC	.450 amp at 115 VAC RMS

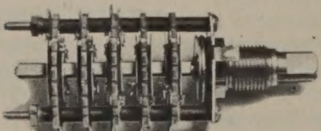
Current Carrying Capacity:
Brass silver plated - 2 amp, Coin silver alloy - 2 amp

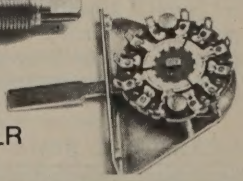
Dielectric Strength: 750 VAC between critical parts and ground

Contact Resistance: (Path resistance not included)
Silver plated parts - average initial 3 milliohms.
Coin silver alloy parts - average initial milliohms.

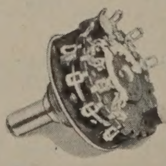
SUBMINIATURE TYPE ROTARY SWITCHES

- Available 1-6 Poles
- 12 position 30° Throw





SMLR



Current and Voltage Ratings: Resistive Load.
Brass, silver plated, make and break:

.550 amp at 28 VDC	.170 amp at 115 VAC RMS
.135 amp at 100 VDC	.8 amp at 24 VAC RMS

Coin silver alloy, make and break:

1.100 amp at 28 VDC	.335 amp at 115 VAC RMS
.27 amp at 100 VDC	1.6 amp at 24 VAC RMS

Current Carrying Capacity:
Brass silver plated - 7 amp. Coin silver alloy - 9 amp

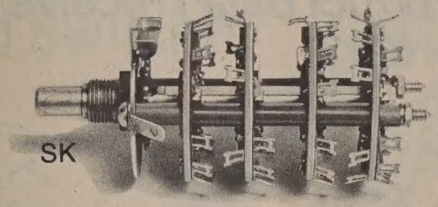
Dielectric Strength: 750 VAC between critical parts and ground.

Contact Resistance: Silver plated parts - average initial 5 milliohms.
Coin silver alloy parts - average initial 3 milliohms.

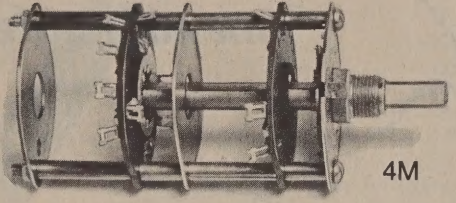
Standard Grigsby

Rotary Switches

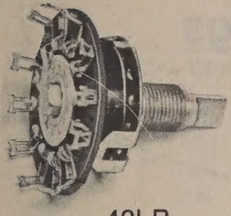
SK, 4M, 42LR, 7M, 5M ROTARY SWITCHES



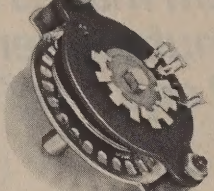
SK



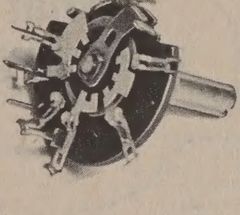
4M



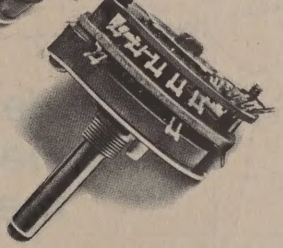
42LR



7M



5M



Current and Voltage Ratings: Resistive Load.
Brass, silver plated, make and break:

1.5 amp at 28 VDC	.230 amp at 115 VAC RMS
.22 amp at 100 VDC	1.75 amp at 24 VAC RMS

Coin silver alloy, make and break:

2.6 amp at 38 VDC	.450 amp at 115 VAC RMS
.34 amp at 100 VDC	3.4 amp at 24 VAC RMS

Current Carrying Capacity:
Brass silver plated - 9 amp. Coin silver alloy - 12 amp

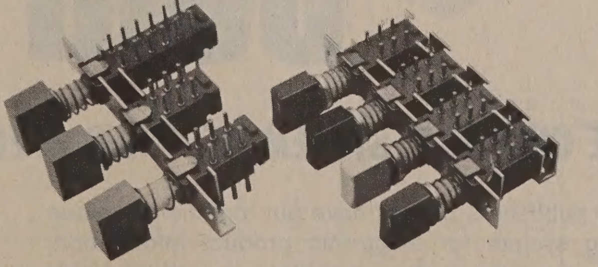
Dielectric Strength: 1,000 VAC between critical parts and ground.

Contact Resistance: Silver plated parts - average initial 5 milliohms.
Coin silver alloy parts - average initial 3 milliohms.

New Dual Flex Detent™
added to 7M line

- 1 9/16″ Detent
- Dual ball starwheel design for long life
- Positive indexing

PB 400 PUSHBUTTON SWITCHES



Contact Resistance: (Contact + Path): Average initial less than 5 milliohms. Average after 25,000 cycles (no load) is less than 10 milliohms.

Insulation Resistance: Between adjacent terminals, also between terminals and chassis - greater than 7,500 megohms.

Current/Voltage Ratings: Resistive Load a.c. 40 watt/d.c. 15 watt.

100 ma @ 150 VDC	175 ma @ 250 VAC
350 ma @ 125 VAC	1.3 amp @ 28 VAC

Current Carrying Capacity: 2 amp maximum

Voltage Breakdown: Between all terminals connected together and mounting chassis, also between adjacent terminals—1500 VAC minimum.

Switching Functions: 2, 4, 6 and 8 pole, double-throw, non-shorting.

A/C Switch Availability: A two pole double throw A/C switch, rated at 4A/250V can be included in the switching functions on any available switch chassis.

Standard Grigsby's Engineering Staff will answer any inquiries regarding your switch problems or switch design. Because our switches are custom built, it is necessary for us to know how you wish to combine your options and what circuitry is required. Your own drawings may be submitted or you may use our convenient layout sheets that are available without charge by contacting our Sales Office.

What can I use to keep all the manufacturers' product data I receive in order?
What system makes filing or retrieving manufacturers' catalogs fast and easy?
Which file system have thousands of engineers purchased because they know it works?

eem FILE SYSTEM

THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

Here's how to order your eem FILE SYSTEM:

For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:

United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

United Technical Publications, Inc., Div. of Cox Broadcasting Corp. • 645 Stewart Ave., Garden City, N.Y. 11530

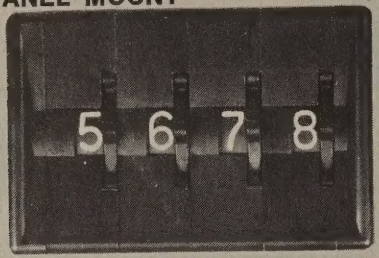
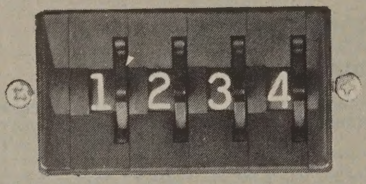
Thumbwheel Switches

FRONT PANEL MOUNT



REAR PANEL MOUNT



ECONOMICAL TO SPECIFY, EASY TO INSTALL, EFFICIENT IN USE

SAE's family of Thumbwheel Switches consists of three rear-mounted widths and two front-mounted widths. Up to four characters can be hot-stamped on the .500″ wide wheel.

Contact springs and holders are unique in that one design fits all switches. Contacts can be arranged in any of the four quadrant positions, or even four contacts can be mounted, if required, for 4-pole switching. This versatility makes it possible to duplicate every existing output code and also allows the design of complex switching codes not available from any other manufacturer.

There are six fingers to provide greater circuit design flexibility in adapting to codes.

Printed circuit boards offer the flexibility of different terminations to suit your particular application. Almost any type of connection can be made.

SPECIFICATIONS

Materials:

Housing, opaque wheels, contact spring holder and end plates made from SE-O polyester thermoplastic for dimension stability, solvent resistance, low surface friction and excellent resistance to wear.

Translucent wheels made from Lexan.

Detent spring formed from corrosion-resistant stainless steel.

Contact spring is phosphor bronze with .00005″ minimum gold over .00005″ minimum nickel.

PCB is .031″ fiberglass, flame retarded epoxy resin per MIL-P-13949D with .00003″ minimum gold per MIL-G-45204, Type II, Class 1 over .0002″ minimum nickel per QQ-N-290, Class 2.

Hardware is corrosion resistant steel.

Mechanical:

Life: Over 1,000,000 detent operations.

Operating Force: 7 to 12 ounces.

Operating Temperatures: −20°C to +70°C.

Weight: Approximately ⅓ ounce.

Environmental:

Vibration: 15G's 10-2000 cycles per MIL-STD-202, Method 204.

Shock: 200G's for 6 ms.

Electrical:

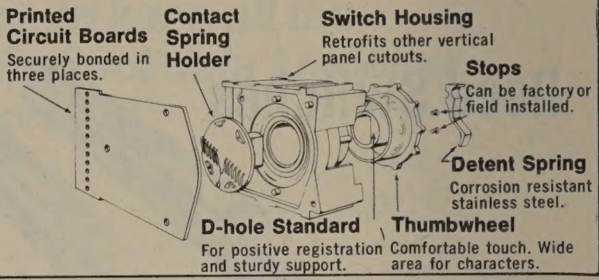
Rating: 0.100 amp at 115 VAC or 28 VDC (resistive). Current carrying capacity (non switching) is 1 amp per common output line.

Contact Resistance: 0.1 ohm maximum.

Insulation Resistance: 1000 megohms.

Dielectric Strength: 100 V RMS.

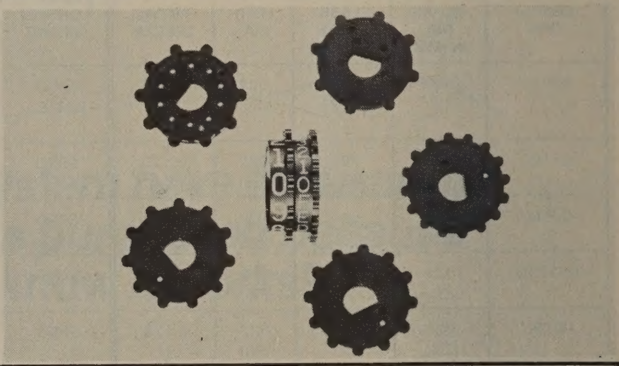
CONSTRUCTION



Printed Circuit Boards
Securely bonded in three places.
Contact Spring Holder
Switch Housing
Retrofits other vertical panel cutouts.
Stops
Can be factory or field installed.
Detent Spring
Corrosion resistant stainless steel.
D-hole Standard
For positive registration and sturdy support.
Thumbwheel
Comfortable touch. Wide area for characters.

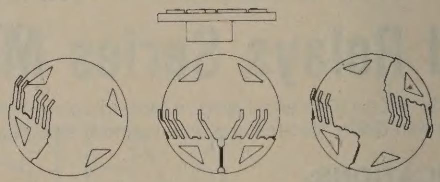
15 THUMBWHEELS

The design of the thumbwheel permits the hot-stamping process to be utilized to its fullest extent in creating a clean, permanent character that's unbeatable for legibility. The wheels are available in three drum widths and have 8, 10, 11, 12 or 16 positions.



ONE-DESIGN CONTACT SPRING AND HOLDER

Fits all Thumbwheel Switches.



VARIETY OF PRINTED CIRCUIT BOARDS

SAE PCBs provide for hard-wiring or printed circuit board pins, accepts diodes, resistors, resistor networks and complete circuits.

**½" wide switch is accomplished by ordering a 3706 or 3720 plus a .150" wide spacer, No. 1454
***½" wide switch is accomplished by ordering a 3752 plus a .150" wide spacer, No. 1453

COLORS, MARKINGS, OPTIONS

Black housings are generally preferred for use with equipment with light colored panels. For dark-colored panels, or where many assemblies are involved, matte beige looks more attractive. Decimal points and custom markings are white on black housings and are black on beige housings.

For long assemblies in which many consecutive switches are involved, consider using a different colored wheel for the first station of each related group of switches. Or use colors to separate groups into functional blocks, i.e., Red for danger; Yellow for caution; Green for proceed; Blue for control, etc.

TABLE II — WHEEL COLORS

OPAQUE		TRANSLUCENT
0 — Black	**5 — Green**	**3 — White (customer supplies external lighting)**
1 — Beige	**6 — Blue**	**8 — White (SAE provides internal lighting)**
2 — Red	**7 — Special**	
4 — Yellow	**9 — White**	

TABLE III — WHEEL IDENTIFICATION

("0" in part number)

10 position	0-9	8 position	0-7
10 position	+ − + etc.	11 position	0-10
10 position	0, 1, 0 etc.	12 position	0-11
10 position	0, 5, 0 etc.	16 position	0-9, A-F
		16 position	0-15

"0" specifies standard numerals. The "1" designation covers special or custom markings. Whenever "1" is specified for custom markings, SAE must be advised what characters are to be provided in each position of the wheel in relation to the output code.

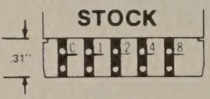
ORDERING INFORMATION

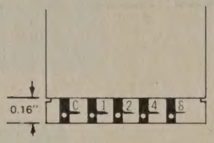
TABLE IV— PCB LENGTH AND TERMINATION

Other PCB lengths and hole configurations are available on special order.

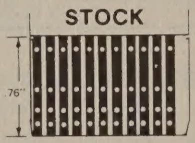
#0
Direct solder.



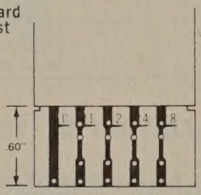
#1
Solder only.
Shortest depth behind panel.



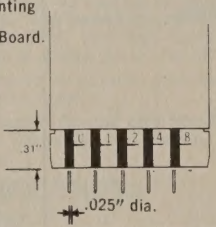
#2
Component Mounting Board.
For direct soldering.



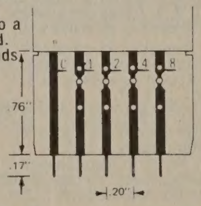
#3
Component Mounting Board for shallowest depth behind panel.
Solder only.



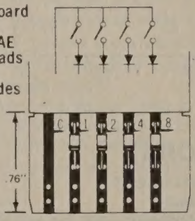
#4*
With pins for mounting into a Mother Board.



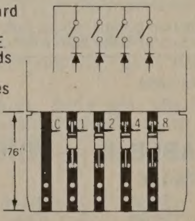
#5
Component Mounting Board with pins for mounting into a Mother Board. Customer loads and solders own diodes.



#6
Component Mounting Board with diodes installed. SAE supplies, loads and solders 1N4148 diodes with anode toward common.

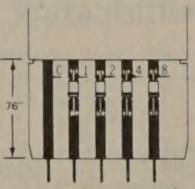


#7
Component Mounting Board with diodes installed. SAE supplies, loads and solders 1N4148 diodes with cathode toward common.



#8
Same as #6 except includes pins for mounting into a Mother Board.

#9
Similar to 7 and 8 cathode toward common and PC pins.



***Note:** SAE can provide dimensional drawings indicating the recommended Mother Board hole locations in relation to the panel cutout.

16	Black	— —	— —	1434 1454‡	— —	— —

* ½ as wide as the switch, i.e., .250" and .175"
† Similar to #1430 except face height measures .960" in lieu of .980"
‡ .150" wide

Blind Slave Switch Modules are available to satisfy 2-pole decimal requirements or custom multi-pole switching applications. The 5000 Series slave switch is made from Spacer No. 1410 (.250" wide). All of the other switch sizes are slaved by using a spacer, the same width as the switch housing.

BAND HARDWARE NUMBERS

Number of Switches	Band Hardware Suffix Numbers (to Part No. 1501)				
1	67	75	52	58	46
2	117	114	87	90	74
3	167	154	122	121	104
4	217	193	157	153	133
5	267	232	192	184	162
6	317	272	226	215	190
7	367	311	261	247	219
8	416	350	296	278	248
9	466	389	331	310	277
10	516	429	366	341	306

Note: There are many other band lengths required because custom assemblies occasionally require spacers that are one-half the width of the switch module. Any length bands are readily available. The longer assemblies may require 4 bands for stability purposes.

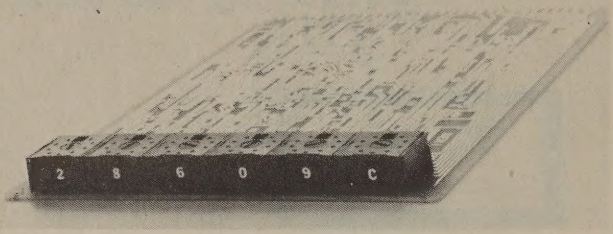
Strip-Pak™ Switches

MODULAR ROTARY PCB SWITCH



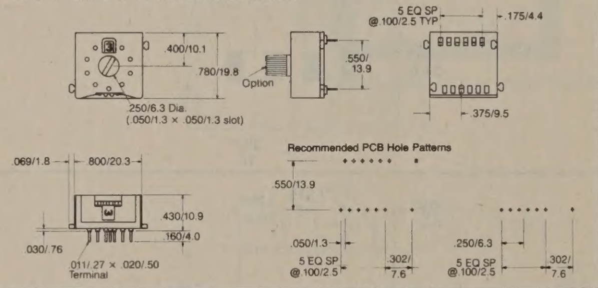
Strip-Pak is a low profile, binary-coded rotary switch designed for PCB mounting. It's a modular switch that snaps together to form a multiple-station assembly. Strip-Pak is an economical alternative to conventional thumbwheels. It eliminates hard wiring and cables and significantly reduces installation costs.

Strip-Pak is exceptionally versatile. It can be installed at the edge of a PC board for vertical or horizontal mounting on a front panel. Or you can install it anywhere on a board for behind-the-panel programming. Strip-Pak's unique snap-together design allows for mixed output codes within the same group of switches. Right from stock. So there's no delay when ordering custom assemblies.

Strip-Pak switches can be activated in any of three ways. By thumb pressure. Screwdriver. Or by optional color-coded snap-in knobs that can be installed even after the switch is mounted.

Strip-Pak is also available in 10 and 16 detent positions with a wide spectrum of output codes.

OUTLINE DIMENSIONS



SPECIFICATIONS

Materials:

Housing: Glass-filled polyester — low moisture absorption, solvent resistant and self-extinguishing per UL 94V-0.

Contact/Terminal: Copper alloy, nickel and gold plated (30μ in. min.).

PC Board: Epoxy glass laminate — ½ oz. (14 grams) copper, nickel plate and gold plate (30μ in. min.).

Physical Characteristics:

No. of Switching Positions: 10 and 16.

Life: 500,000 detent operations at 25°C for a resistive load of 0.010 amp at 28 VDC.

Tangential Operating Force: 3.5 to 9 oz. (99.2 to 255 grams).

Temperature Range: −20°C to +75°C operating
−40°C to +100°C storage

Standard Color: Black (color coded knob optional).

Weight: 0.15 oz. (4.25 grams)/station.

Electrical Characteristics:

Max. Recommended Non-switching Load: 3 amp at 115 VDC or 28 VDC.

Max. Recommended Switching Load: 0.125 amp at 115 VAC or 28 VDC.

Min. Recommended Switching Load: 0.000010 amp at 0.020 VDC.

Dielectric Withstanding Voltage: 500 V RMS.

Insulation Resistance: 1000 megohms, min. (dry).

Switch Circuit Resistance: 0.100 ohm, max., initial. 0.200 ohm, max., after life test.

SERIES 2200

- Modular design.
- Long life (500,000 detent operations).
- Wide range of available codes.
- Wave solderable.
- Positive detent.
- Low profile (0.430/11mm high).
- Integral mechanical stabilizer pin.
- Lobed thumbwheel.
- Colored snap-in extender knobs (optional).

HOW TO ORDER

3 x 2 2 2 2 - 0 0 0 0 - 1 (03)

No. of Stations
Series Number
Output Code (See Table I)
Mounting Attitude (See Table II)
Identification
0 — Standard — Drum Marking
1 — Custom — Drum Marking
2 — Standard — Decal
3 — Custom — Decal
4 — Standard — Both Drum Marking and Decal

Knob Length
0 — No knob
1 — .30/7.6
2 — .50/12.7
3 — .75/19.0

Knob Color
0 — Black
1 — Beige
2 — Red
4 — Yellow
5 — Green
6 — Blue
9 — White

Location of Stop Pins
-0 — Decimal point on housing
-1 — Stops
-2 — Decimal point and stops

Notes:

1. Be sure the mounting attitude is consistent with rotation specified by output code.
2. Whenever stop pins are called out on multiple station assemblies, clarification has to be made in the description as to which station gets stops.

TABLE I — OUTPUT CODES

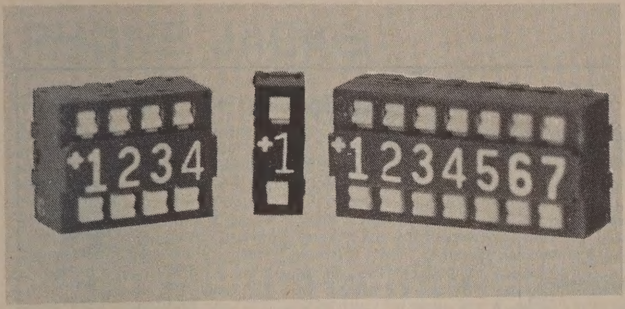
BIT™ Switch

DIP SWITCH
SERIES 1000



A miniature, behind-the-panel, PCB Mounted BCD or Hexadecimal to 10-position decimal input device. Performs the same functions as slide switches, thumbwheels, toggle switches, etc.

Applications include switching circuits or BCD coding in computer peripherals, communications equipment, instrumentation/test equipment, traffic signal controllers, matrix mounting, etc. SAE's miniature Series 1000 BIT Switch offers the design and packaging engineer many unique advantages over similar type devices available today.

First, the switch's new, improved mechanical design assures greater component reliability. A wider, sturdier lever wheel provides for constant and positive wiping action, whether under shock or vibration, for more dependable electrical performance. The lever wheel design also features a large recess across the top of each end, to make programming even simpler. And, the greater housing surface area allows for larger characters and numerals — a very legible .120″ high, which can be hot-stamped for either horizontal or vertical mounting.

To utilize minimum space behind the panel, BIT Switch features a reduced profile that measures only .280″ high. Switch housings and lever wheels are molded in a solvent-resistant type thermoplastic. Additionally, any custom marking can be provided; and for those applications where required, accommodations for a dust cover have been provided on the switch housing. The table shown at right lists the various Series 1000 switches available.

SPECIFICATIONS

Material:

Housing: Blue, Type 6/6 30% glass-filled nylon.

Base: Blue, Type 6/6 30% glass-filled nylon.

Lever Wheels: White, polyester thermoplastic.

Contact Slugs: Phosphor bronze with 0.00003″ hard gold over 0.00005″ nickel.

Contact Terminals: Beryllium copper with 0.00003″ hard gold over 0.00005″ gold.

Mechanical: 2000 switching operations for each SPST station.

Electrical:

Current Rating Non-Switching: 50 VDC at 100 mA.

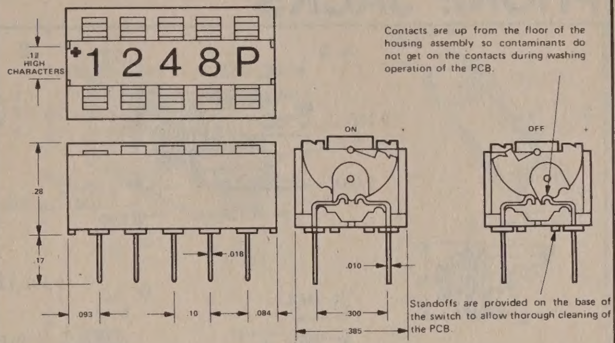
Current Rating Switching: 5 VDC at 100 mA or 24 VDC at 25 mA.

Contact Resistance: 100 milliohms, maximum.

Insulation Resistance: 100,000 megohms.

Dielectric Breakdown Voltage: 500 VDC, minimum.

Circuit Capacitance: 5 pF, maximum.



Contacts are up from the floor of the housing assembly so contaminants do not get on the contacts during washing operation of the PCB.

Standoffs are provided on the base of the switch to allow thorough cleaning of the PCB.

Note: Available for custom marking are the numerals 0 through 10 for either horizontal or vertical mounting, and the letters A, B, C, D, E, F and P for horizontal only.

ORDERING INFORMATION

Part No.	Length ±.005″	No. of Stations	Colors Available	Identification (Horizontal Mounting)
1001-093	.180	1x SPST	Black Housing w/White Lever Wheel	1
1002-692	.280	2x SPST	Blue Housing w/White Lever Wheel	1-2
1003-692	.380	3x SPST	Blue Housing w/White Lever Wheel	1-3
1004-692	.480	4x SPST	Blue Housing w/White Lever Wheel	1-4
1005-692	.580	5x SPST	Blue Housing w/White Lever Wheel	1-5
1006-692	.680	6x SPST	Blue Housing w/White Lever Wheel	1-6
1007-692	.780	7x SPST	Blue Housing w/White Lever Wheel	1-7
1008-692	.880	8x SPST	Blue Housing w/White Lever Wheel	1-8
1009-692	.980	9x SPT	Blue Housing w/White Lever Wheel	1-9
1010-692	1.080	10x SPST	Blue Housing w/White Lever Wheel	0-9

Covers for BIT SWITCHES are available to act as a dust cover for hostile environment applications; prevent unintentional programming; use during wave-solder to prevent flux from contaminating the switch.

Part No. Cover	Position	Part No. Cover	Position
6802	1002-692	6807	1007-692
6803	1003-692	6808	1008-692
6804	1004-692	6809	1009-692
6805	1005-692	6810	1010-692
6806	1006-692		

Cover increases package dimension as follows:

Height: .280″ to .320″ (adds .040″).

Width: .385″ to .435″ (adds .050″).

Length (for 1008): .880″ to .975″ (adds .095″).

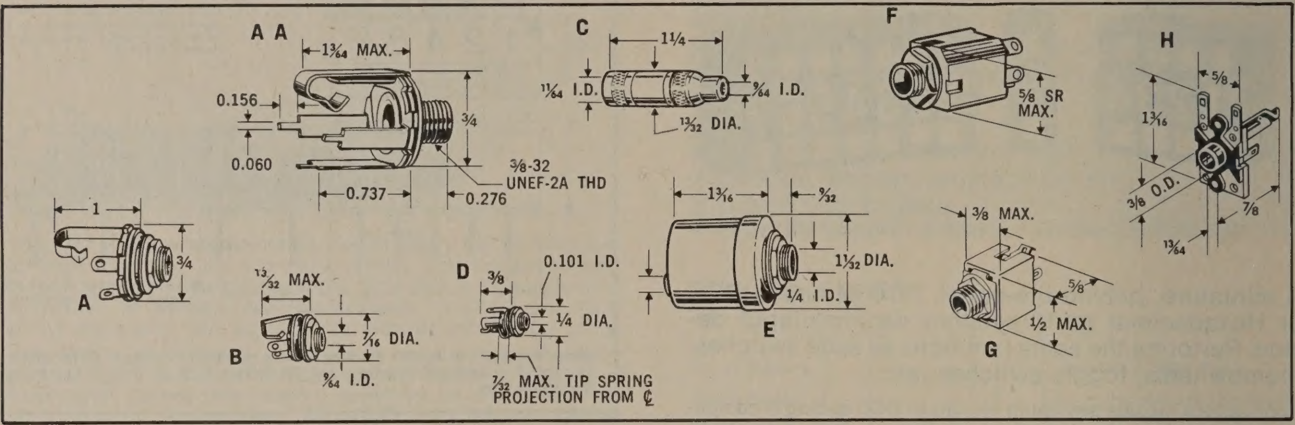
PHONE JACKS



A. LITTEL-JAX® PHONE JACKS

Quality phone jacks that mate with standard ¼" phone plugs. Notched insulating washers, mechanically interlock springs and solder lugs. "V" bend in tip spring firmly "holds" mating plug. Minimum space requirements. Economical. Mounts in single ⅜" hole, panel up to 3/32" thick, except L-11 and L-12A in panels up to ¼" thick.

Nos. C-11 and C-12A mate with No. 440 (PJ-055B) Plug; C-12B, S-12B and S-13B mate with No. 480 (JAN-PJ-068) or No. 484 (W.E. No. 309) Plug. Nos. C-11 and C-12B have locating pins (non-turn devices). No. S-11 similar to No. 11 except .210" I.D. sleeve. C-11, C-12B and C-12A per MIL-J-641. All others mate with standard ¼" dia. plugs.

AA.

New Littel-Jax PC-12A for printed circuit mounting. Std. ¼" dia. jack with all the construction features of standard Littel-Jax. Same circuit as in No. 12A.

No. 14B stereo Littel-Jax, switches-out speakers when connecting stereo headphones. Dual, N.O. switch contacts, open both stereo circuits independently when a 3-conductor plug is inserted.

C. "TINI-EXTENSION JAX"

An extension or cable jack to mate with Tini-Plug, Two-conductor. Metal housing for ruggedness and electrical shielding. Solder lug terminals.

Switchcraft Part No. 125 .... U.S.A. List Price **$2.20**

D. MICRO-JAX® SUB MINIATURE PHONE JACK

Precision manufactured jack for miniaturized applications. Two-conductor, single closed circuit. See Schematic Circuit III. Silver plating on special tempered nickel silver sprngs. Internally keyed nylon insulation interlocks springs and solder lugs to eliminate shorts. Fits .190" dia. hole in panels to 3/32" thick. Only 1/25th the size of standard phone jacks. Mates with Micro-Plug®, Series 850, 880.

Switchcraft Part No. TR-2A .... U.S.A. List Price **$0.90**

E. "SHIELDED JAX"

A unique modification of the Littel-Jax. The shield is assembled into and made part of the jack. Ideal for high impedance circuits.

Part No.	Schematic No.	Typical Mating Plug	Conductors	U.S.A. List Price
CN-11	I	250	2	$1.55
CN-12A	III	250	2	1.60

THE ABOVE ARE STRICTLY ELECTRICAL SCHEMATICS AND DO NOT NECESSARILY INDICATE RELATIVE SOLDER LUG POSITIONS.

PHONE JACKS

F. HI-D JAX® PHONE JACKS

New smaller, more compact phone jacks, mate with std. ¼″ phone plugs. Molded box body protects integral silver-plated, nickel silver springs. Low contact resistance and electrical leakage with little capacity between the springs. Mount on ⅝″ centers in single ⅜″ hole in panels up to 5/32″ thick, depth behind panel 1 13/32″. All part Nos. with "L" prefix mount in panels up to ¼″ thick; part Nos. with "N" prefix feature a threaded nylon bushing to provide complete insulation of jack sleeve from mtg. panel. Part Nos. with "NL" prefix feature a ⅜″ long threaded nylon bushing (same as "N" series) and mount in panels up to ¼″ thick. All part Nos. with "M" prefix are designed and adjusted to mate with telephone and MIL-std. plugs. Tip and ring (3-cond.) springs are gold plated, and shunt and isolate switching circuits (where used) have welded cross bar palladium contacts for stable, low resistance inter-connections in sensitive and critical circuits. Prefix "MN" is same as "M" above except bushing is molded nylon. Stereo HI-D Jax Nos. 114B and L-114B switches out speakers when connecting stereo headphones. Dual N.C. switch contacts opens both stereo circuits independently when a 3-cond. plug is inserted. New HI-D Jax with P.C. terms. mount to single- and double-sided, and multilayer boards up to 3/32″ thick. Standoff shoulders on terms. provide stable mtg. Perfectly compatible with wave, dip or hand soldering. Lock nut and washer supplied for additional mtg. to chassis/panel.

G. "TINI-D JAX" MINIATURE PHONE JACK

New, small completely enclosed, molded phone jack. Mate with Switchcraft Tini-Plug, No. 750 etc. Phenolic housing protects the bifurcated beryllium copper springs from being bent during mounting. No. 142A has threaded bushing for conventional mtg. Tip spring terminals that "snap-in" P.C. boards. Mount on ⅜″ centers, in ¼″ dia. hole in panels up to ⅛″ thick. Depth behind panel 7/16″.

Part No.	Schematic No.	Typical Mating Plug	Conductors	U.S.A. List Price
142A	III	750	2	$0.80

H. "R-JAX" ECONOMY PHONE JACKS

Radically new jack design. Simple mounting needs only two (2) 3/32″ dia. rivets to fasten securely to mounting panel. Accept standard ¼″ dia. phone plugs.

Part No.	Schematic No.	Typical Mating Plug	Conductors	U.S.A. List Price

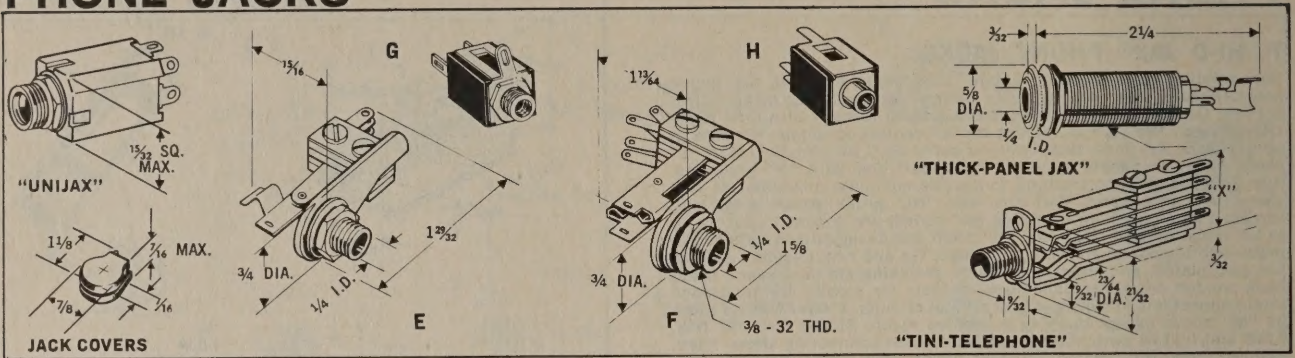
PHONE JACKS



"UNIJAX" MINIATURE JACKS

New, miniature 2-cond. and 3-cond. phone jacks, mate with std. .173″ dia. phone plugs. Molded "box" body protects integral silver-plated beryllium copper tip and ring springs. Extremely low contact resistance and electrical leakage with low electrical capacity between springs. Mounts in 9/32″ dia. hole in panels up to 1/8″ thick. Mounts on 15/32″ centers. Only 7/8″ depth behind panel.

"MICRO-D JAX" SUBMINIATURE ENCLOSED PHONE JACK

"Super-Small", 2-cond., shunted, fully enclosed jack is only 5/16″ x 11/32″ x 11/16″. One-piece molded body locks all internal parts in place. Mates with Switchcraft Micro-Plug phone plugs.

G.

No. MDSL-2A has solder lugs and #10-48 threaded bushing with mtg. washer and lock nut (supplied). Mounts thru 13/64″ dia. hole in panels up to 1/16″ thk., singly or in rows on .350″ (min.) centers.

H.

No. MDPC-2A has P.C. terms. with standoff shoulders. Mounts singly or in rows or arrays on .315″ (min.) centers or .350″ (min.) centers. Adjacent sleeves touch each other when mtd. on .315″ centers.

Part No.	Schematic No.	Typical Mating Plug	Conductor	U.S.A. List Price
MDPC-2A MDSL-2A	III	850	2	$.80 .80

E. "SF-JAX" SHORT FRAME JACKS

Series 20 — High quality commercial jacks, solder lugs parallel to mounting surface. Mount in 3/8″ dia. holes, panels up to 3/16″ thick.

F.

Series 50 — Similar to Series 20, except solder lug location necessitates more depth but requires less panel space. Mount in panels up to 1/4″ thick. Switching contacts, where applicable, are welded fine silver cross bar, rated at 8 amps, 125 VAC.

Part No. C-55B is MIL-type with military insulation and finishes, otherwise similar to commercial Series 50. Mounts in panels up to 1/4″ thick.

PHONE JACKS

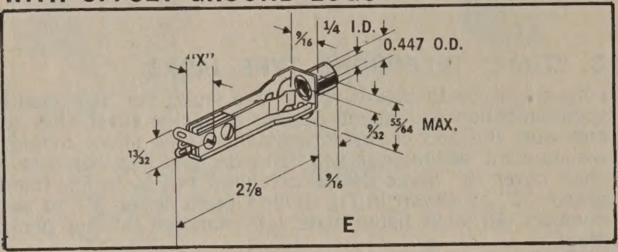
E. "MT-JAX" MILITARY TELEPHONE JACKS WITH OFFSET GROUND LUGS



E

"MT-Jax" jacks with offset ground lugs are similar to "MT-Jax" jacks except ground lugs are offset. Reduces cost and simplifies ground lug terminal wiring. With ground lugs offset in the away position with respect to jack side frame member, a single ground buss wire runs through entire row of lugs. For two rows on 5⁄8″ vertical centers with lugs facing each other, ground buss wire connects all lugs in both rows.

Part No.	Schematic No.	Adjusted for Plug	Mil-Type No.	"X" Dim.	U.S.A. List Price
XMT-332A	III	440	JJ-024	1⁄2″	$2.30

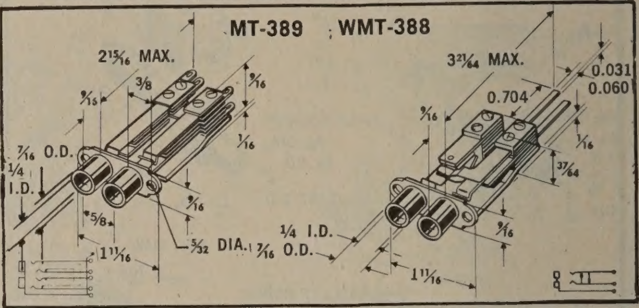
XMT-334B	XII	482	JJ-042	9⁄16″	2.70

† MIL Type PJ-051B.

"TWIN-JAX" TWIN MILITARY TELEPHONE JACKS

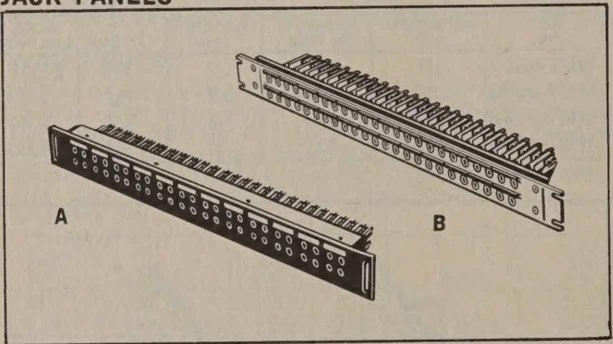


Similar in design to "MT-Jax" jacks, except frame is double width, with 2 mounting ears on 13⁄8″ centers; bushings are on 5⁄8″ centers. MT388, Mil-Type No. JJ-088, mates with Nos. 411, 412, 413, 420 and 423 plugs. MT-389 has two 3-conductor jacks interconnected, mates with No. 482 Plug. Part No. WMT-389 has wire-wrapping terminals. Same quality construction, etc.; but now provides the speed, convenience and proven reliability of wrapped, solderless connections.

Switchcraft Part No. MT-388 .... U.S.A. List Price **$6.60**
Switchcraft Part No. MT-389 .... U.S.A. List Price **7.65**
Switchcraft Part No. WMT-389 .... U.S.A. List Price **7.65**

JACK PANELS

JACK PANELS



Rugged, heavy-duty jack panels for switching, distribution and control of audio signals in broadcasting stations, theatres, P. A. systems installations, etc. Series 1200, Fig. A, black phenolic panels reinforced with steel for the utmost rigidity. Mounting brackets slotted to fit all standard 19″ relay racks. Panel includes plastic covered designation strips. Series 2800, Fig. B, clear anodized aluminum panel. Extremely rugged, yet lightweight. Includes new narrow designation strip for each row. Add Prefix "X" to part numbers to indicate offset ground lugs on jacks. Aluminum panels available only with offset lugs.

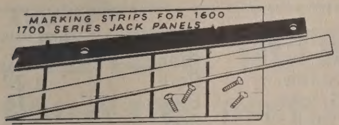
2332B	Two MT-332B jacks	**5.90**

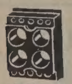
DESIGNATION STRIPS



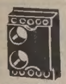
"Kwik-Change" reusable designation strips, and covers standard with Modular Jack Panels. Series JP01-2000 thru JP11-2000.

Part No.	Description	U.S.A. List Price
DS-307	Designation Strip Kit, complete. Includes sheet of 5 marking strips and 2 plastic covers. For 19" panels.	**$1.50**
DS-308	Same as DS-307, except for 23" panels.	**1.65**
DS-306	Designation Marking Strips. Sheet of 5 strips for 19" or 23" panels.	**.60**

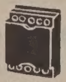
MODULE INSERTS SERIES JP9900



JP9942



JP9922

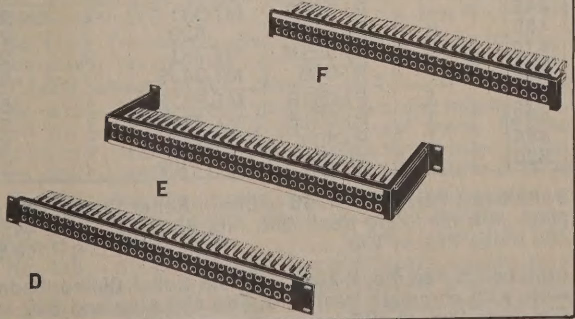


JP9902

Rugged molded plastic inserts, used in the Modular Jack Panels, JP01-2000 thru JP11-2000.

Part No.	Description	U.S.A. List Price
JP9942	Black; 4 jack openings (less jacks). Includes 2, #4-40 mounting screws.	**$1.15**
JP9922	Black; 2 jack openings (less jacks). Includes 2, #4-40 mounting screws.	**1.15**
JP9902	Black; with holes. Includes 2, #4-40 mounting screws.	**1.05**

MODULAR JACK PANELS, SERIES "JP"



Unique modular jack panel concept. Insert assemblies (up to 4 jacks) are installed from rear and fastened from front. Mounting and wiring are quick and easy. Individual jacks or assemblies are removed with minimum disturbance to adjacent jacks and wiring. Accepts all Switchcraft and other standard telephone jack panel components (incl. WECo types), jacks, lamp jacks, switches, and coaxial jacks.

Three mounting styles: rack, extension, or flush mount: two panel widths: 19" and 23". All panels are 1¾" high; two "kwik-change" designation strips are supplied.

Series "JP" panels are lightweight, black anodized aluminum; inserts are precision molded black plastic (mounting screws supplied).

Series JP01-2000 through JP06-2000: Double row panels; insert openings on ⅝" centers in quads: ¾" between openings in adjacent quads — no accidental cross-connect.

Series JP01-2000, JP03-2000, and JP05-2000 (19" wide) mount 48, "MT-Jax" telephone jacks or 24 "Twin-Jax" phone jacks.

Series JP02-2000, JP04-2000, and JP06-2000 (23" wide) mount 56 components.

Series JP07-2000 through JP11-2000: Double row with openings on ⅝" centers. Series JP07-2000, JP09-2000, and JP11-2000 (19" wide) mount 52 "MT-Jax" telephone jacks or 26 "Twin-Jax" phone jacks.

Series JP08-2000 (23" wide) mounts 64 "MT-Jax" jacks or 32 "Twin-Jax" phone jacks.

Series JP07-2000 is equivalent to WECo #230A. Series JP08-2000 is equivalent to WECo #231A.

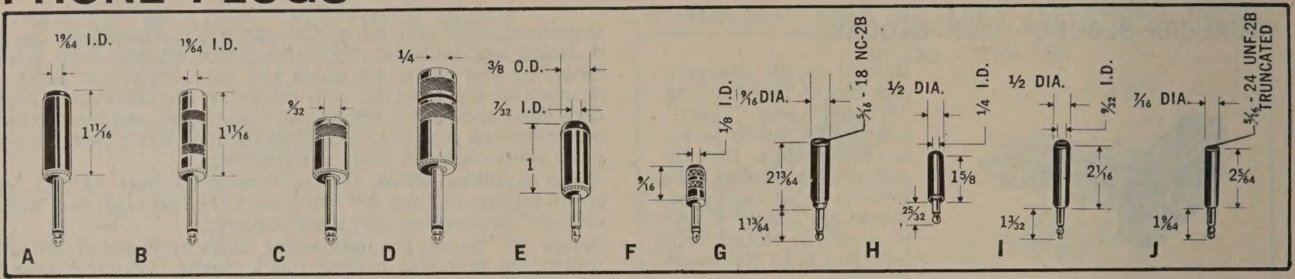
PHONE PLUGS



LITTEL-PLUG® PHONE PLUGS

Small size phone plugs fit standard ¼″ phone jacks except *Nos. S-250, S-260 and S-280 which have a .206″ dia. sleeve. †Nos. C-240, C-245 and C-270 feature an integral cable clamp with screw terminals. §No. R-280 has short sleeve or Revere Recorders. ‡No. 288 has a wide insulator between tip and sleeve for use in a 3-conductor jack to perform a 2-conductor function without shorting. Plugs with solder terminals have built in cable clamp. Shielded metal handles are nickel plated brass; others are molded of durable plastic; ⅝″ long x ½″ dia.

780	E	Solder	Shielded	1.60

MICRO-PLUG SUBMINIATURE PHONE PLUGS

Subminiature 2-conductor phone plugs, only 1 1/64″ long; ¼″ O.D., .097″ dia. sleeve. Mate with No. TR-2A. Have screw on handles in black, red or natural anodized aluminum; accommodates cables up to 7/64″ dia. All plugs have integral cable clamps.

Part No.	Fig.	Description	U.S.A. List Price
850	F	Black Handle	$1.10
855	F	Red Handle	1.10
880	F	Natural Handle	1.10

MILITARY TYPE LITTEL-PLUG PHONE PLUGS AND "EXTENSION-JAX" PHONE JACKS

Designed to meet exact industrial and military requirements. Plugs are made in accordance with MIL-P-642(A) specifications. One-piece tip rod and one-piece sleeve and plug body provide internal interlock to prevent parts shifting position. No. 820 "Extension-Jax" jack meets MIL-J-641A specifications and mates with Littel-Plug plug No. 430. No. 470 has shielded handle; all others plastic: †Red. ‡Black. All plugs have screw terminals.

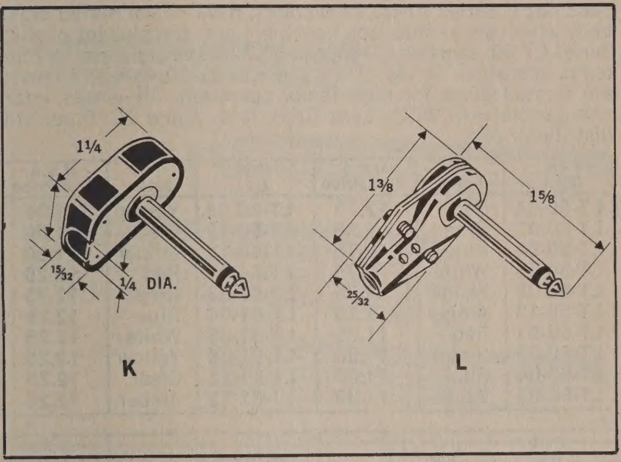
PHONE PLUGS

"FLAT-PLUG" PHONE PLUGS



¼″ phone plugs featuring flat, space-saving handles. Ideal for applications where conventional plugs would protrude too far. Nos. 220, 225 have adapter clips which make them convenient to clamp standard phone tips to terminals. Shielded flat plugs. Nos. 228 and 238 have nickel plated steel handles; all others have red or black plastic handles. No. S-230 has a .206″ dia. sleeve.

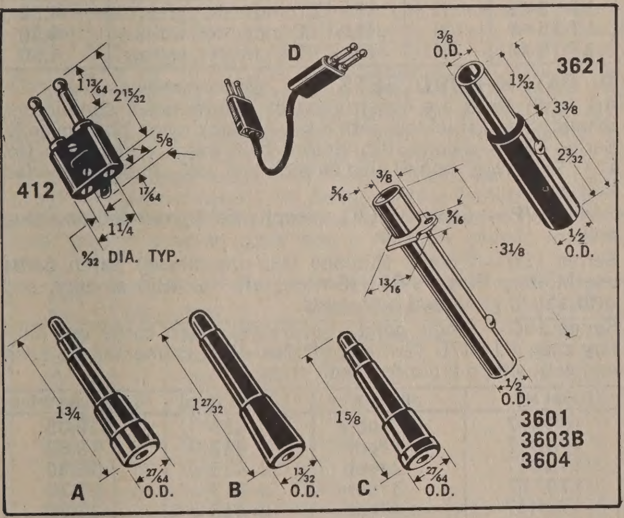
JACKS & PLUGS

MILITARY TYPE "TWIN-PLUG" PHONE PLUGS



Meet exact industrial and military requirements. No. 411, both design and materials, is manufactured in accordance with MIL-P-642(A) specs. Nos. 412 and 413, use identical materials. "Twin-Plug" plug sleeves spaced ⅝″ center to center with self-aligning feature.

Part No. 411—Two electrically independent 2-conductor plugs in black plastic handle. Has provision for Cord Clamp No. S-2674. Military Type PJ-327 (Old Navy No. 491242). Interchangeable with W.E. 327 .... U.S.A. List Price **$7.05**

Part No. 412—Two electrically independent 2-conductor plugs in black plastic handle. Has external cord clamp. Old Military Type PJ-289. Similar to W.E. 289B ...... U.S.A. List Price **$6.55**

Part No. 413—Three circuit plug with two electrically independent tip circuits in heavy duty die cast frame. Molded black phenolic handle notched to indicate polarity. Interchangeable with MIL-Type PJ-421 and W.E. 241..U.S.A. List Price **$7.20**

Part No. 414—Six circuit plug. Two electrically independent 3-conductor ¼″ dia. fingers. Black polarized handle. Interchangeable with W.E. 338A .... U.S.A. List Price **$12.30**

Part No. 415—Six circuit plug. Two electrically independent 3-conductor fingers. One ¼″ dia. finger, one .206″ dia. for automatic polarization. Black handle .... U.S.A. List Price **$13.70**

Part No. S-2674—Strain relief clamp, natural brass. Used with Nos. 411, 414, 415 "Twin-Plug" plugs. Pkg. of 100. U.S.A. List Price **$14.00**

"CV-JAX" COAXIAL VIDEO JACKS AND "CV-PLUG" COAXIAL VIDEO PLUGS

High quality coaxial-video jacks and plugs designed for use in patching high frequency signals, microwave, telemetry and data transmitting applications. Jacks are made for 50 and 70 ohm circuits and use standard RG cables. No. 3601 accepts RG-59/U. No. 3603B has crimp termination feature and accepts RG-59A/U (73 ohm video) or RG-59B/U (75 ohm) cable; crimp sleeve supplied. No. 3604 has same features as No. 3603B except rear bushing (ferrule) accepts larger RG-62/U or RG-62B/U (93 ohm) cables (solder terminating). Mates with plugs, Part No. 3621 and 3622. Heat sink protects insulation when soldering cable shield. Mount in single 7/16″ hole: Depth behind panel is 2 29/64″. No. 3621, terminating plug with 75 ohm ±1% ½ watt resistor. No. 3622, feed through plug.

"DUMMY-PLUG" DUMMY PLUGS

Low cost, 2- and 3-conductor molded plastic dummy plugs for use in switchboards, jack panels. Inserts in jack as does a phone plug to switch circuits, but can not couple incoming signals. Can also be used to plug up unused phone jacks to prevent accidental insertion of a phone plug. Series 491, 3-conductor, .207″ dia. finger. Series 492, 3-conductor, .250″ dia. finger. Series 493, 2-conductor, .250″ dia.

JACKS & PLUGS

REPLACEMENT PATCH CORDS

Patch cords are made of bronze tinsel conductors, insulated and shielded, with a heavy black nylon braid overall. Cords designed for use with Switchcraft plugs 413, 420 and 482 or equivalents. When used with No. 420, clip off unnecessary lead. Series 89Q — 2-cond. shielded cord; shield term. at both ends. Series 89P — 2-cond. shielded cord; shield term. at one end only.

"LAMP-JAX" LAMP JACKS

E.

Switchboard type long frame lamp jacks. No. LT-47, black nylon housing insulates lamp from frame. Interchangeable with WECo No. 47B. Accepts standard lamp and lamp caps. WECo Nos. 2, 72 or TEL-LED solid-state lamps. No. LT-48, ballast lamp jacks for circuits with high temperature and wattage. Steel frame and bushing. Teflon sleeve. Accepts standard telephone lamps or ballast lamp No. 60XA. Both jacks mount in standard Switchcraft jack panels.

F.

No. WLT-47, similar to LT-47, except wire-wrapping terminals. Eliminates soldering. Terminals are .704" long x 0.060" wide x .025" thick for actuator springs. Uses standard T-2 slide base lamps; mounts in Series 1200, 1400, 2400, 2600, 2800 and "JP" panels.

G.

No. LT-49 lamp jack has long leaf springs and nickel plated brass frame. Mounts in panels/chasses, 1/32" to 1/4" thick in 7/16" O.D. holes on 9/16" min. centers. No mtg. hardware required. Straight solder terminals. Uses T-2 lamp or TEL-LED solid-state lamp.

TEL-LED INDICATOR SOLID-STATE LAMPS

Bright red LED indications (180° viewing angle) from solid-state lamp for new equipment and retrofits. Plug-in replacement for T-2 slide base incand. lamps has solid-state reliability, low power, low heat and immunity to shock/vibration. 48 VDC operation @ 8.5 ma. Fits Switchcraft "Lamp-Jax" jacks and other std. telephone type lamp jacks. Color bezels are ideal for color coding groups of indicators.

J.

Lens Caps. Series LT-50, in 6 colors, have nickel plated brass body which snaps into jack housing. Lens: translucent plastic. Series LT-60, same as LT-50, except 7 lenses are glass for high temp. operation. Series LT-61, same as LT-50, except 7 lenses are frosted glass for high temp. operation. All lenses interchangeable with WECo Lens Caps, Nos. 2 and 72. 5 per std. distributor pkg.

D. PATCH CORD SETS

See illustration on Page 4277.

All patch cords are constructed of bronze tinsel conductors, insulated and shielded, with a heavy black nylon braid overall. Series 17Q — 2-cond. (tip/sleeve) twin patch cords have No. 413 "Twin-Plug" phone plug at each end with shields grounded both ends.

Series 17P — Same as 17Q, except shield grounded one plug only.

Series 18Q — 2-cond. shielded (tip/ring/sleeve) patch cords use Military Plug PJ-051 (Switchcraft No. 482) at each end with shield grounded both ends.

Series 19Q — Single cond. (tip/sleeve) patch cords use Military plug PJ-047B (Switchcraft No. 420) connected to each end with shield grounded both ends.

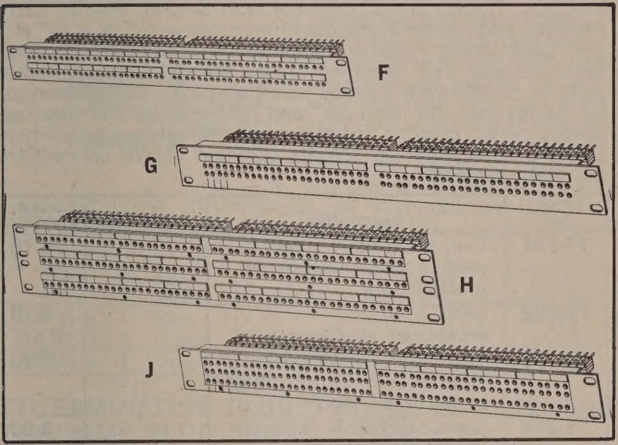
"TINI-TELEPHONE" PATCHING SYSTEM COMPONENTS

SERIES TT "TINI-TELEPHONE" JACK PANELS



Series "TT" Jack Panels provide up to 104 jacks (1¾" x 19" area) or 156 jack (2⅝" x 19" area) in standard panels. Constructed of black anodized, extruded aluminum with an extra wide flange for greater rigidity. Series 1600 double row panel for 96 TT-Jax jacks comprises an aluminum panel and 4 molded plastic inserts which accommodates 24 jacks each. Series A1600 — similar to Series 1600; accepts 104 TT-Jax or "WTT-Jax" jacks (3 rows, 52 jacks ea.; jack mtg. centers 5/16" each row). Provides greater connecting density on standard 1¾" x 19" panel. Series B1600 and C1600 — 3 row panels with 2⅝" x 19" front panel area. Series B1600 mounts 144 TT-Jax or "WTT-Jax" jacks, and Series C1600 holds 156 jacks. Series 1700, a double row panel for 48 "TT-Twin-Jax" jacks; consists of aluminum panel with 2 molded plastic inserts which accept 24 twin jacks ea. Series B1700 same as Series 1700 except mounts 48 "Tri-Jax" jacks, Part Nos. TT-95 or WTT-95 (24 per insert). All Series feature exclusive Switchcraft "kwik-change" designation strips. Strips consist of a clear plastic snap-on cover and a reusable plastic marking strip.

Part No.	Fig.	Rows	Number of Jacks	U.S.A. List Price

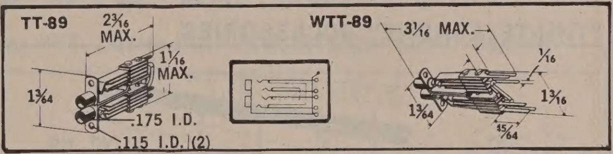
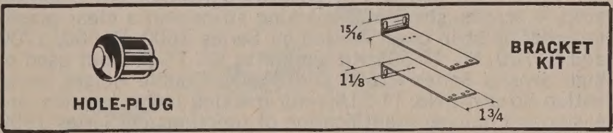
"TINI-TELEPHONE" "TWIN-JAX" TWIN JACKS

"TT Twin-Jax" and "WTT Twin-Jax" twin jacks are similar in design to TT-Jax and "WTT-Jax" single jacks described above, except the 2 frames are welded back-to-back with mtg. holes on 13/16" centers and bushings on 5/16" centers. Twin jacks are designed to be mounted on Series 1700 jack panels. Part No. TT-89 has solder lug terminals; Part No. WTT-89, wire-wrapping terminals. Both mate with TT-Patch Cords. Series TT-120, TT-160, TT-740, and TT-860.



Switchcraft Part No. TT-89 .... U.S.A. List Price **$5.75**
Switchcraft Part No. WTT-89 .... U.S.A. List Price **5.90**

JACK PANEL ACCESSORIES



Hole Plug, P-1801, molded nylon, fits all Switchcraft jack panels, Series 1200, 1400, 2400, 2600, 2800. Designed to plug unused holes in jack panels. Bracket Kit, K-107, consists of 2 long L-shaped steel, stand-off brackets and eight No. 6-32 self-tapping screws. To hold jack panels, Series 1400, 2600, 7" in front of mounting rack.

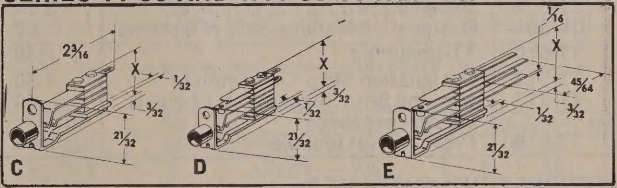
P-1801	Hole Plug	$0.35
K-107	Bracket Kit	5.45

SERIES TT-30 AND WTT-30 TT-JAX® PHONE JACKS



New, "tini-telephone" jacks, miniatures of the std. long frame telephone-type jacks. Rugged steel frame, with gusset for extra rigidity. Special nickel silver springs with welded crossbar palladium contacts. Series TT-30 require only 2 13/16" depth behind panel, mounted on 5/16" centers, in a ¼" dia. hole in panels up to ⅜" thick. Designed to be mounted on Series 1600, A1600, B1600 and C1600 "TT" Jack Panels. Series TT-30 jacks also available with wire-wrap terminals. Fig. E. Series WTT-30. Same quality construction. Depth behind panel 2 11/16". Both TT-30 and WTT-30 jacks can be mounted in combination or interchangeably with "TT-Switch" switches and "TT Lamp-Jax" lamp jacks on Series 1600, A1600, B1600, and C1600 panels.

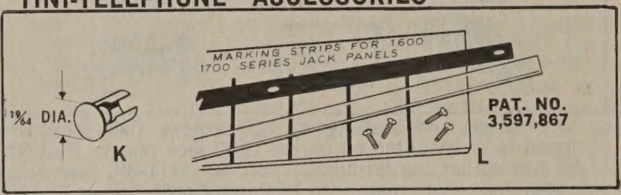
"TINI-TELEPHONE" PATCHING SYSTEM COMPONENTS

"TINI-TELEPHONE" ACCESSORIES



K.
TT-Hole Plug — used to close off unused holes in TT-Jack Panels. Black plastic with brass sleeve.

L.
"Kwik-Change" Designation Strip Kits for TT-Jack Panels. No. TT-501 Kit consists of an extruded aluminum mounting strip, 4 screws, sheet of 5 marking strips and a clear plastic designation strip cover — used on Series 1600, B1600, 1700, and B1700. No. TT-504 Kit similar to Kit TT-501 but used on high density Series A1600 and C1600. Double Height Designation Strip Kit No. TT-516 — for marking larger legends, and easier and quicker identification of functions on Series 1600, B1600, 1700, and B1700 "tini-telephone" Jack Panels. Includes extruded aluminum black anodized mounting strips, 4 mounting screws, matte finish white plastic marking strip and clear plastic cover. With Series 1600, B1600, and B1700 panels. "Kwik-Change" designation strips project approx. 5/32″ above top edge of panel.

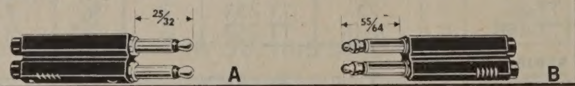
TT-TWIN PLUG MINIATURE TELEPHONE TWIN PLUGS



Series TT-260 miniaturized twin phone plugs are the only plugs available which fit jacks on 5/16″ centers, both horizontally and vertically in dense arrays.

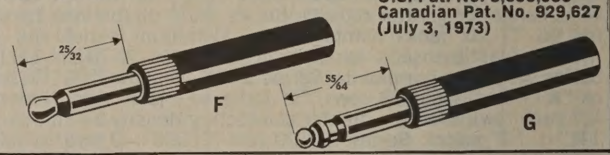
A.
Part Nos. TT-261 and TT-262 are twin 2-cond.

® Registered trademark of Switchcraft, Inc.

B.
Part Nos. TT-263 and TT-264 are twin 3-cond. Handle easily installed and removed. Handle dimensions — 5/16″ W. x 5/8″ H. x 1 3/4″ Long (max.). Polarizing notches on handles locate finger positions, and .173″ diameter fingers are self-aligning. Access ports on handle permit probe insertion for tip circuit monitoring. Mates with "TT Twin-Jax" and TT-Jax jacks with bushings spaced on 5/16″ centers. Tip and ring terminals are screw-type, shield bridging feature permits common sleeve connections with cable shield.

Part No.	Description	Schematic	U.S.A. List Price
TT-261	Two, electrically independent, 2-cond. plugs in one black handle		$6.70
TT-262	Same as TT-261 except red handle		6.70
TT-263	Six-circuit, two, electrically independent, 3-cond. plugs in one black handle		8.90
TT-264	Same as TT-263, except red handle		8.90

TT-PLUG®

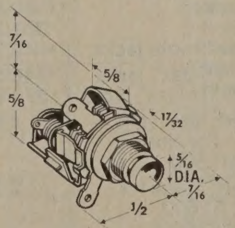


U.S. Pat. No. 3,656,089
Canadian Pat. No. 929,627
(July 3, 1973)

Series TT-250 miniaturized 2- and 3-cond. phone plugs, .173″ dia. finger fits all "tini-telephone" jacks — Series TT-30, WTT-30, TT-600 and Part Nos. TT-89, WTT-89, TT-95, and WTT-95. Also mates with "Unijax" jacks, Series TT-250 plus are used on Series TT-720 and TT-740 patch cords. Handles twist-on and twist-off. Each handle includes a special boss which mates with a groove in the plug body. A 30° clockwise twist locks the handle on the plug body. The knurled area of the handle should be squeezed lightly to unlock. To remove — slide handle forward. Plastic handle: 1 1/2″ long x 5/16″ dia.

Part No.	Fig.	Conductors	Handle	U.S.A. List Price
TT-251	F	2	Black	$2.80
TT-252	F	2	Red	2.80
TT-253	G	3	Black	4.05
TT-254	G	3	Red	4.05

ILLUMINATED "LITTEL-LITE" SWITCHES



Series 210 "Littel-Lite" Switches are unusually small, momentary contact, illuminated pushbutton types. Requires minimum panel space; ideal for limited space applications and press-to-test circuits. One-piece, clear plastic button and shaft is illuminated by a single miniature lamp, 6V or 28V. Lamps are not furnished. See lamp listings. Includes kit of 4 color chips (red, amber, green, and yellow), can be inserted in switch at any time. Nickel silver spring contacts are recommended for low level circuits where contact resistance is not important. Also available, fine silver contacts (Part No. suffix "S") rated at 3 amps, 300 watts, max. A.C. non-inductive load. Lighting circuit is independent of switching circuit. Mounts in single 3/8″ hole in panels up to 1/4″ thick; depth behind panel 1 3/16″.

Part No.	Action	Schematic Circuit	U.S.A. List Price
211	S.P.S.T.n.o	1-A	$3.10

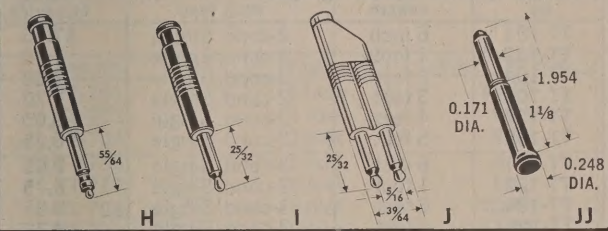
TT-TERMINATING PLUG, TT-LOOPING PLUG, AND TT-DUMMY PLUG PHONE PLUGS

Canadian Pat. No. 929,627 (July 3, 1973)



H.
TT-Phone Plug Terminating Plugs for terminating circuits with a specific load. A precision ½ watt, ±1% resistor is molded into the handle. Resistance value marked on handle.

I.
TT-Phone Plug Dummy Plugs plug into TT-Jax jacks to actuate shunt and isolated switching circuits.

J.
TT-Phone Plug Looping Plugs for looping or patching adjacent jack circuits. Fingers of twin looping plugs are wired internally. Terminating and Dummy plugs; .173″ dia. finger; 1½″ L. x 19/64″ dia. handle. Looping twin plugs; (2) .173″ dia. fingers; 19/64″ W. x 1¾″ L. handle.

J.
Dummy TT-Twin Plugs — Designed to be inserted into twin phone jacks to actuate shunt and isolated switching circuits. .173″ O.D. fingers; tips, rings (3-cond.) and sleeves completely isolated. Molded ivory handle.

JJ.
Dummy TT-Plug plug actuates shunt isolated switching circuits for simulated jack operation. 2- and 3-cond. types; resists taking permanent set and ensures consistent operation of jack springs, shunt and switching circuits. Flared handle for easy insertion and withdrawal.

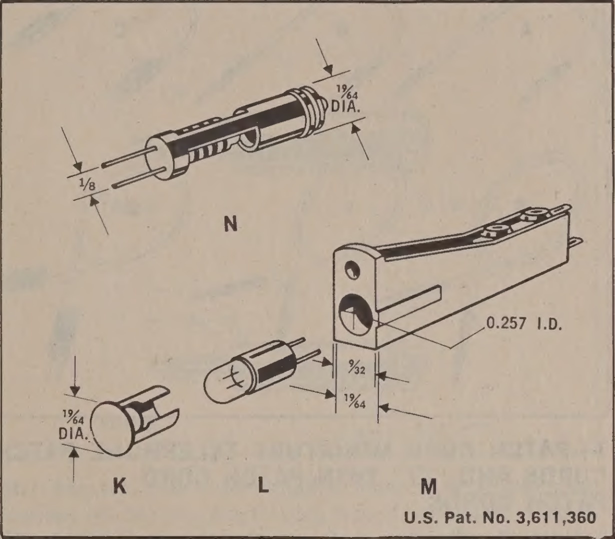
M. “TT LAMP-JAX” MINIATURE LAMP JACKS



U.S. Pat. No. 3,611,360

Small, space-saving “tini-telephone” lamp-jack. Designed to mount on Series 1600, A1600, B1600, and C1600 TT-Jack Panels. Lamp-jack, one-piece molded housing, has integral heat sink fins. Accepts industry standard T-1¾ bi-pin lamps.

K.
TT-Jewel Assembly consists of a colored jewel and a brass sleeve which accepts the bi-pin lamp. Jewel serves as a relamping tool for the lamp jack. Lamp jack mounts with one #3-48, 5/16″ long screw (not furnished). Depth behind panel — 2 3/16″.

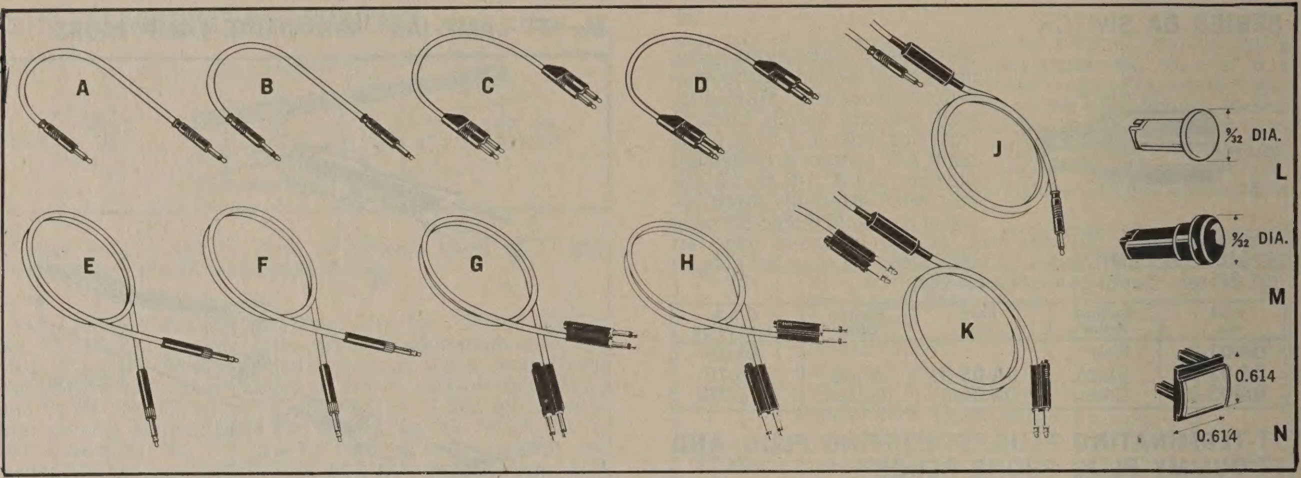
TT-PATCH CORD CORDS



TT-PATCH CORD MINIATURE TELEPHONE PATCH CORDS AND "TT" TWIN PATCH CORD PATCH CORDS

"tini-telephone" patch cords are available in 2 styles—(1) 2- and 3-cond. single and twin plugs, molded on braided shield, grey plastic jacketed cables; (2) 2- and 3-cond. attachable single and twin plugs with braided shield, nylon woven, black cord. TT-Patch Cord cords mate with "Unijax" jacks; TT-Jax jacks, Series TT-30, WTT-30, TT-600; Nos. TT-89 & WTT-89 "TT Twin-Jax" jacks; & Nos. TT-95 & WTT-95 "Tri-Jax" jacks. TT-Patch Cord cords with twin plugs mate with "TT Twin-Jax" jacks and single TT-Jax jacks spaced on 5/16" centers.

Series TT-100 — A Single cond. Shielded cable with a 2-cond. phone plug molded at each end.

Series TT-120 — B 2-cond. Shielded cable with a 3-cond. phone plug molded at each end.

Series TT-140 — C 2-cond. Shielded cable with a 3-cond. twin-plug molded at each end. Sleeve circuits are common. Tip circuits wired tip to tip.

Series TT-160 — D 4-cond. Shielded cable with 5-cond. twin-plug molded at each end. Sleeve circuits common. Tip circuits wire tip to tip, ring circuits wired ring to ring.

Series TT-720 — E 2-cond. Shielded cord with a TT-251 phone plug attached to each end. Shield is grounded to sleeve of each plug and the tinsel cond. is wired tip to tip. The other conductor is clipped off.

Series TT-740 — F 2-cond. Shielded cord with a TT-253 phone plug attached to each end. Shield is grounded to sleeve of each plug, the two cond. are wired tip to tip and ring to ring.

Series TT-840 — G 2-cond. Shielded cord with a TT-261 twin-plug phone plug attached to each end. Plug sleeves at both ends connected in common through shield. Tips wired to corresponding plug tips on opposite end.

Series TT-860 — H 4-cond. Shielded (5-circuit) cord with a TT-263 twin phone plug attached to each end. Plug sleeves at both ends connected in common through shield. Tips and rings wired to corresponding plug fingers at both ends.

TT-PATCH CORD CORDS

TT-REPLACEMENT CORDS

Series TT-700 cords made of high quality bronze tinsel conductors, covered with thermoplastic insulation, then a braided shield and braided black nylon jacket. Cord ends reinforced to accept the internal threaded end of a TT-Phone Plug plug. Used as a replacement cord on Series TT-720 & TT-740 patch cords. Also used on TT-Twin Plug plugs. Series TT-260 in dual cable assemblies with 2- and 3-cond. (or combinations) plug fingers requiring independent tip, ring, and sleeve circuits. Used also for single cable assemblies where supplementary cross-over wiring is needed for common tip ring, and/or sleeve circuits.

Series TT-800 cords are same as Series TT-700 except cord ends are not reinforced. For fabricating cable assemblies with Part Nos. TT-261 and TT-262 "TT" Twin-Plug plugs or as replacement cord on Series TT-840 TT-Patch Cord cords.

Series TT-820 cords have identical construction as Series TT-800 cords except they are 4-cond. shielded. Used to fabricate cable assemblies with Nos. TT-263 and TT-264 TT-Twin Plug plugs or as replacement cords for Series TT-860 TT-Patch Cord cords.

"TINI-TELEPHONE" ATTENUATOR PATCH CORDS

For back-to-back patching of telephone transmission equipment; matches +7 dB receive and −16 dB transmit levels.

J.

Single cords are 2-cond. shielded: 23 dB resistive pad connected between tips and rings.

K.

Twin cords are 4-cond. shielded; 23 dB pads are cross-over wired between tips and rings of twin plug fingers on opposite ends. Twin plug handles have polarizing notches.

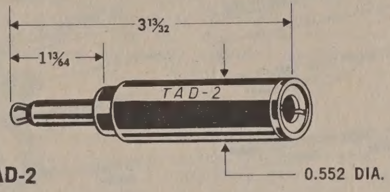
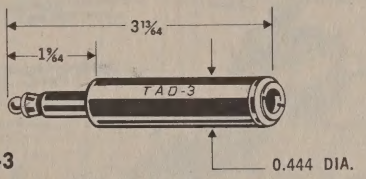
"TINI-TELEPHONE" PATCH ADAPTERS



TAD-2



TAD-3

Patch Adapters have fingers which conform to MIL-P-642 specifications (PJ-047, 2-cond; PJ-051, 3-cond.) and built-in standard miniaturized telephone-type jack in handle. Eliminates cross patching problems in telephone and other audio systems. Eliminates "combination" patch cords (standard plug on one end and miniaturized plug on the other). Part No. TAD-2 converts standard 2-cond. jack (¼" I.D.) sleeve to standard miniaturized jack (.173" I.D. sleeve). Part No. TAD-3 converts standard 3-cond. jack (¼" I.D. sleeve) to standard miniaturized jack (.173" I.D. sleeve).

Switchcraft Part No. TAD-2 .... U.S.A. List Price **$4.75**

Switchcraft Part No. TAD-3 .... U.S.A. List Price **7.00**

"TINI-TELEPHONE" SIGNAL PLUGS

Seals jack bushing openings; eliminates accidental plug insertion into critical circuits. Legend capability.

L.

Series TT-512 Critical Circuit Signal Plugs fit flush against jack bushing.

M.

Series TT-513 Priority Circuit Signal Plugs: same as Series TT-512, except extended flange behind button.

N.

Series TT-514 Designation Signal Plugs cover 4 jacks in .312" sq. openings. Series TT-512 and TT-513 used on all TT-Jack Panel jack panels: Series TT-514 used on Series 1700 and B1700.

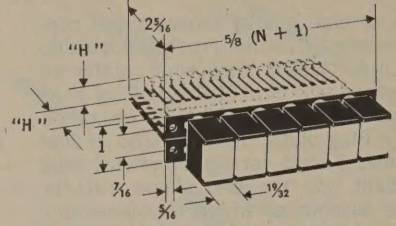
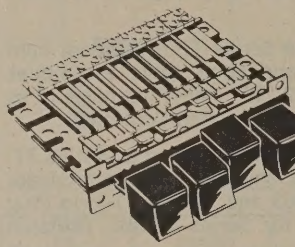
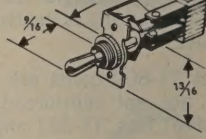
SWITCHES

Switchcraft switches give you unlimited latitude in the selection of switching functions and actuation for customizing your equipment designs. Whether you choose pushbutton or lever actuated switches, Switchcraft Authorized Industrial Distributors can aid you in the selection and specification of the proper switch to fill your particular requirements. All Multi-Switch® switches are factory-assembled to your specifications or select one from the standard listing shown in this catalog. Factory assembly, plus rigorous inspection and testing, is your assurance of optimum performance and dependability.

Only Switchcraft offers 2 complete lines of multiple station pushbutton, and lever switches . . . 2 proven solutions to man-machine interface problems.







PUSHBUTTON ACTION

Whatever your requirements for switching, you will find Switchcraft Multi-Switch® switches enable you to design a cybernetically correct, error-reducing panel. Both illuminated and non-illuminated types are available with non-lock, all-lock, interlock, push-to-lock, push-to-release functions. Illuminated types offer single or multiple lighting effects. Series 7000 and 21000 frames are available from 1 to 37 stations in a row, Littel Multi-Switch® switches Series 35000, 36000, 37000 and 38000, are compact switching units offering 1 to 18 stations in a row. Series 65000, 66000, 67000, 70000 and 71000 are low cost switches, in all functions, up to 18 stations in a row.

LEVER ACTION

Switchcraft offers the largest selection of illuminated and non-illuminated lever-type switches in the industry. They come in a wide choice of sizes, 2 or 3 position, locking and non-locking types. They range in size and style from miniaturized "Feather Lever", featuring changeable push-on color knobs to "Lever-Lite", a 3-color illuminated type lever switch; to the industry standard "Telever", a telephone type switch featuring field changeable functions.

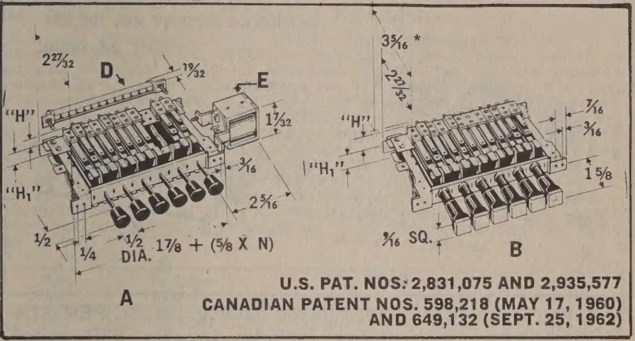
Z51248	5/8" H. x 3/4" W.	White	Orange-Red	1.90

Economy of non-illuminated buttons with the vivid color-legend display of illuminated buttons. "Glo-Button" pushbuttons look and function like an illuminated button, but require no lamp or power. Mount on all pushbutton switches with standard .050" x .187" plungers, as Switchcraft Series 7000, 8000, 35000, 70000 and 71000 Multi-Switch® switches, and other switches having maintained plunger action with a maximum of 1/16" fallback. "Glo-Button" pushbuttons have a translucent front screen on which a legend is marked in an opaque color. The opaque color provides a background for the legend while the legend itself remains clear (Figs. A). An internal fluorescent illuminator is carried on a pusher which has two legs extending from the rear. When the button is depressed, the rear legs of the pusher bring the fluorescent illuminator flush with the screen which then lights up due to reflected ambient light, and projects a clearly visible legend, see Fig. B. All "Glo-Button" pushbuttons have black button housings and are available with standard legends: "A" thru "Z", "0" thru "50", and "ON", "OFF". Eight basic types of button are offered. To order, specify part number and add suffix letter or numeral to part number which describes desired legend. Example: To order 1/2" sq. "Glo-Button" pushbutton with black screen, orange-red illuminator and numeral "7", part number would read X21248-7.

SWITCHCRAFT® INC.

5555 NORTH ELSTON AVENUE / CHICAGO, ILLINOIS 60630 / TEL: (312) 792-2700 / TWX: 910-221-5199

MULTI-SWITCH SWITCHES



U.S. PAT. NOS: 2,831,075 AND 2,935,577
CANADIAN PATENT NOS. 598,218 (MAY 17, 1960)
AND 649,132 (SEPT. 25, 1962)

Basic design simplicity provides a unique multiple station pushbutton switch that's rugged, compact, versatile and completely flexible in switching functions. Order the Multi-Switch you now require from stock, and later change circuits and/or functions in the field by simply positioning adjustments of stop plate, latch bar spring. Standard Multi-Switch switches are available with these functions. Interlock, restores to normal any previously actuated station when another station is actuated.

Lock-out feature when combined with interlock prevents the operation of more than one pushbutton at a time. (Standard on all assembled interlock switches.) Non-Lock, momentary action of each station. All-Lock, accumulative locking of all stations with restoration of all stations to normal when release station is depressed. Push-Lock/Push-Release — pushbutton locks when depressed and is released when again depressed.

A. SERIES 7000 NON-ILLUMINATED SWITCHES

Heavy gauge steel switch frames mount on panels up to 3/8″ thick, with 3 5/16″ depth behind panel. Rugged, welded end-mounting brackets have four 8-32 tapped holes for ease of panel mounting. Attractive, round brown push-on-buttons supplied for each station, plus extra red button for use when switch requires a release station. Center-to-center distance between buttons is 5/8″. Steel plunger .050″ x .187″ accepts standard push-on-buttons and "Glo-Button" pushbuttons. Standard plunger is 1 1/8″ long, but can be supplied up to 5 3/4″ long on special order. Switch frames with buttons on 3/4″ centers are available in Series 8000 which has all the same features as Series 7000. Switches feature switch stacks with welded-crossbar palladium contacts rated at 2 amps, 200 watts, max., AC, non-inductive load. Series 7000 Multi-Switch switches are available with from 1 to 37 stations. Series 8000 from 1 to 31 stations. When ordering Series 8000 add 10% to prices. All switches are completely assembled and tested at the factory. All assemblies listed in the Part No. table have 2-C or 4-C switch stacks at each station. Additional switching and other options are available on special order. Only the most commonly used switch assemblies are listed below.

B. SERIES 21000 ILLUMINATED SWITCHES

Similar in switching functions and characteristics to non-illuminated Multi-Switch switch but, with these outstanding features: modern square button design with bright uniform front and side illumination provided by lamp diffusers; knurled retaining collar for quick easy front-of-panel lamp replacement. Two lamp voltages: 6V and 28V. Buttons with white jewels and white diffusers are furnished for switching and release stations. Standard switches listed below provide "L" type lighting (pushbuttons light in "IN" position). To have pushbutton light in "OUT" position, prefix Part No. with M (e.g. M2110). To have them light in both the "IN" and "OUT" positions, prefix with N. All switches include switch stacks at each station incorporating welded-crossbar palladium contacts rated at 2 amps, 200 watts, AC, non-inductive load. Center-to-center distance between buttons is 5/8″ on Series 21000, available with up to 37 stations in a row. Series 22000, buttons on 3/4″ centers, available up to 31 stations only. Add 10% to price of Series 21000 when ordering Series 22000. Series 21000 and 22000 switches are completely assembled and inspected at the factory. All assemblies listed in the Part No. table have 2-C or 4-C switch stacks at each station and provide "L" type lighting. Additional switching and/or other types of lighting available on special order. Only the most commonly used switch assemblies are listed. Refer to lamp listing for lamp data.

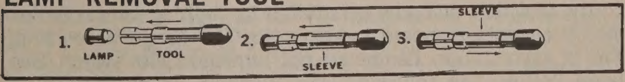
LAMP REMOVAL TOOL



Subminiature T-1¾ lamps are easily removed with Switchcraft No. P-2460 Lamp Removal Tool. (1) Simply slip tool over lamp; (2) slide sleeve forward; and (3) pull or slide lamp free. Orange plastic cap on tool serves as finger grip. Also useful on lamps for "Uniswitch" switches, Series LUS; littel Multi-Switch 37000, and DW Multi-Switch switches, Series 67000. Front access to lamp is required.

Switchcraft Part No. P-2460 .... U.S.A. List Price **$1.50**

E. SOLENOID RELEASE — "J" SERIES

A simple solenoid assembly which can be easily assembled on the end of a standard switch. Part No. J-1, is for use on interlocked switches. Part No. J-3, for use on all-lock switches with up to 12 stations. Both are for use in 115 volt, 60 cycle, AC circuits. Specify type of solenoid with your order for a standard Multi-Switch switch.

Switchcraft Part No. J-1 .... U.S.A. List Price **$12.60**
Switchcraft Part No. J-3 .... U.S.A. List Price **13.20**

D. LOCK-OUT BAR "K" SERIES

Prevents operation of more than one switching station at a time. Mounts on back of standard Multi-Switch Series 7000, 8000, 21000 and 22000 frames with two screws (furnished). Available from 2 to 37 stations for a single frame. Lock-Out Bars listed are for 5/8″ center plunger only; for 3/4″ centers, order special.

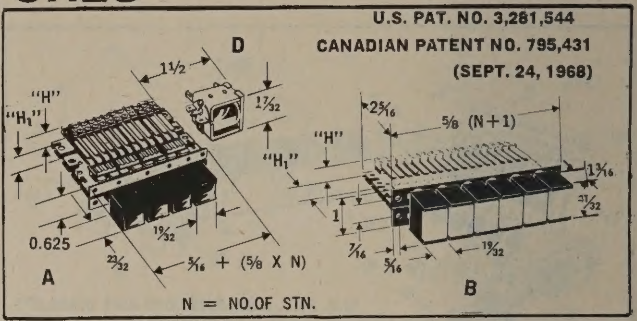
SWITCHCRAFT® INC.

5555 NORTH ELSTON AVENUE / CHICAGO, ILLINOIS 60630 / TEL: (312) 792-2700 / TWX: 910-221-5199

LITTEL MULTI-SWITCH SWITCHES

Compact, versatile high-quality, multiple station pushbutton switches. Four standard functions available: Interlock — actuating a pushbutton automatically restores to normal the pushbutton previously actuated. Lock-Out — prevents operation of more than one pushbutton at a time. This feature is included on all interlock frames. Non-Lock — each pushbutton has momentary action. All-Lock — all pushbuttons, except release, lock when depressed. All pushbuttons restored to normal by actuating release pushbutton. Push-Lock/Push-Release — pushbutton locks when depressed and is released when again depressed. Buttons on ⅝″ centers. Switches available from 1 to 18 stations.



U.S. PAT. NO. 3,281,544

CANADIAN PATENT NO. 795,431

(SEPT. 24, 1968)

A. SERIES 35000 NON-ILLUMINATED SWITCHES

Switches mount on panels up to ⅛″ thick. Provides 6PDT switching in .6 sq. in. Narrow rectangular silhouette permits stacking in parallel rows on ¾″ centers. Only 2 5/16″ depth behind panel. End brackets have four 6-32 tapped mounting holes. A square black pushbutton is furnished for each station and an extra red pushbutton is supplied for use when switch has momentary release station (All-Lock function). Plungers made from .050″ x .187″ steel will accept std. push-on pushbuttons as well as Switchcraft pushbuttons. Series 590, A-590, C-590, D-590, E-590, 600 and "Glo-Button" pushbuttons Series X, Y, and Z. Refer to listings in the catalog. On 2-C PER STATION switches, each station includes two No. 83P switch stacks. On 4-C PER STATION switches, each station includes four No. 83P switch stacks. The following part numbers cover completely assembled and factory tested switches. Should you require optional accessories as different pushbuttons, solenoid release, etc., make your selection from these product listings and add them to the switch part number of your choice shown below. Only the most commonly used switches are listed here.

B. SERIES 37000 SINGLE LAMP ILLUMINATED SWITCHES

Identical in switching functions and characteristics as non-illuminated Series 35000, but features large rectangular shaped pushbuttons which serve as a color or legend coded panel indicator light which actuates up to 6PDT switching. Switches mount in parallel rows from 1″ centers and up. Depth behind panel 2 5/16″. Pushbuttons with large transparent clear display screen and white legend insert, can be hot stamped or engraved, are furnished for switching and release stations. On 2-C PER STATION switches, each station includes two No. 83P switch stacks, one No. H-83P lighting stack and one No. H (convenience) lighting spring. On 4-C PER STATION switches, each station includes four No. 83 switch stacks, one No. H-83P lighting stack and one No. H (convenience) spring. Lighting arrangements such as "L" — pushbuttons light in "IN" position; "M" — pushbuttons light in "OUT" position; and "N" — pushbuttons light in both "IN" and "OUT" positions, can be effected by wiring direct to the No. H-83; and No. H lighting stacks. A single 6V or 28V lamp can be used at each station, not furnished with switch. Refer to Lamp listing. The following part numbers cover completely assembled and factory tested switches. Should you require additional solenoid, etc., make your selection from the various listings and add to the switch part number you have chosen from listing below. Only the most commonly used switches are listed here.

PART NUMBERS/2-C PER STATION (DIM. H - ½″ H_1 - 15/32″)

B. SERIES 38000 TWIN LAMP ILLUMINATED SWITCHES

Same compact assembly and versatility as Series 37000, except features twin lamp illumination at each station for redundant or two color, split-face (alternate) lighting. On 2-C PER STATION switches, each station includes three No. H-83P lighting switch stacks and one No. H lighting spring. This arrangement provides up to 3PDT circuitry. One pole is needed for lighting lamps. On 4-C PER STATION switches, each station includes three No. H-83P lighting switch stacks, two No. 83P switch stacks and one No. H lighting spring. This combination offers 5PDT circuitry; of which, one pole is required for lighting lamps. Series 38000 accepts standard industry No. 718 flange base lamp. Two at each station. Lamps are not furnished with switch. See lamp listing. The following part numbers cover completely assembled and factory tested switches. Should you require optional accessories such as solenoid release, etc., make your selection from product listings and add them to the switch part number of your choice shown below.

ACCESSORIES FOR MULTI-SWITCH SWITCHES

D. SERIES NJ SOLENOID RELEASE

A simple solenoid assembly which can be added to the end of a standard Series 35000, 37000, or 38000, littel Multi-Switch switch to provide electrical release of activated stations. No. NJ-1 designed to release up to 18 interlock stations. No. NJ-3 releases up to 12 all-lock stations. Both are used in 115 VAC, 60 Hz circuits. No. NJ-2 performs the "lock-up" functions, i.e., energizing solenoid immediately immobilizes all switch stations. Actuated stations cannot be released and unactuated; stations cannot be operated until solenoid is de-energized. No. NJ-4 (releases up to 18 interlock stations) and No. NJ-7 (releases up to 12 all-lock stations) are rated at 24 VDC. No. NJ-5 (releases up to 18 interlock stations) and No. NJ-8 (releases up to 12 all-lock stations) are rated at 28 VDC. No. NJ-6 (releases up to 18 interlock stations) and No. NJ-9 (releases up to 12 all-lock stations) are rated at 48 VDC.

Part No.	Function Used-On	Voltage	Max. Duty Cycle	U.S.A. List Price
NJ-1	Interlock	115 VAC	25%	$12.10
NJ-2	Lock-Up	115 VAC	100%	12.10
NJ-3	All-Lock	115 VAC	10%	12.10
NJ-4	Interlock	24 VDC	25%	12.10
NJ-5	Interlock	28 VDC	25%	12.10
NJ-6	Interlock	48 VDC	25%	12.10
NJ-7	All-Lock	24 VDC	10%	12.10
NJ-8	All-Lock	28 VDC	10%	12.10
NJ-9	All-Lock	48 VDC	10%	12.10

LAMPS FOR ILLUMINATED SWITCHES

Lamps are not normally supplied with illuminated Switchcraft switches. See table below for recommendations of lamp to be used.

Part No.	Description	Recommended Switch	List Price U.S.A.
P-1217	6 V, 200 ma., Ind. No. 1786, Screw base	1	$1.55
P-1218	28 V, 40 ma., Hudson No. 369, Screw Base	2	2.60
P-1518	110-125 VAC, 2 ma., Ind. No. NE-2J, Flange Base Neon	3, 8	4.60
P-1519*	110-125 VAC, 1 ma., Ind. No. NE-2D, Flange Base Neon	3	7.75
P-1593-1	28 V, 40 ma., Ind. No. 327, T-1¾ Flange Base	3, 4, 6, 8	1.70
P-1593-2	6 V, 200 ma., Ind. No. 328, T-1¾ Flange Base	3, 4, 6, 8	1.40

P-2193	105-125 VAC, 0.8 ma., Ind. No. A1H Neon	3	3.85
P-2290	6 V, 75 ma., Ind. No. 7377, T-1¾ Bi-Pin	7	1.85

1. Lamp supplied with Series 25000 and 27000 "Lever-Lite". Also for use with "NF-Lite" and "Littel-Lite" switches.
2. Series 25000 and 27000 "Lever-Lite", "NF-Lite", and "Littel-Lite" switches.
3. Series 15000, 21000, and 22000.
4. Series 37000 "Push-Lite", "CordMASTER", & "Lever-Lite" Series 84000 switches and "PL" Indicators.
5. Series 38000.
6. Series 67000.
7. "Uniswitch" switches.
8. Series OA, OB Orcon switches; Series OJ, OK Orcon indicators. (P-1518 not available with Series OJ indicator.)

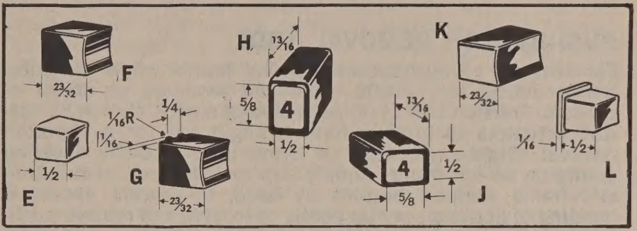
IMPORTANT NOTE: Use Part No. T-14 Lamp Socket to convert Series 25000 and 27000 "Lever-Lite" switches to accept this lamp. Use Part No. T-1 Lamp Adapter to convert sockets on Series 15000, 21000, 22000, 67000. "Push-Lite" switches and "PL" Indicators to accept Part No. P-1890 lamp.

IMPORTANT NOTE: Use Part No. T-2 Lamp Adapter to convert sockets on Series OA, OB Orcon switches and Series OJ, OK Orcon indicators. to accept Part No. P-1890.

* **Caution:** When any switch series utilizes neon type lamps, the lamp shell must be properly grounded to eliminate shock hazard when pushbutton is removed. Bent lamp terminal is common to lamp shell. Permanent ground should be established either by proper line, polarization or use of an isolation transformer.

PUSHBUTTONS FOR MULTI-SWITCH SWITCHES

Non-illuminated pushbuttons for Switchcraft Series 7000, 8000, 35000, 70000 and 71000 Multi-Switch switches, and all other pushbutton switches with a standard .50″ x .187″ plunger. Also fit on Series 5000 "Push-Push" switch.



E.

Series 590, small pushbutton with concave face.

F.

Series A-590, square with lateral concave face.

G.

Series A-590-T2 and A-590-T4, same as Series A-590 except base of pushbutton has tabs to prevent removal of button from front of panel.

H. and J.

Series C-590, and D-590, rectangular pushbuttons with recessed face. Pushbuttons have black housing with white face. Legend on face is black. Available legends are "A" thru "Z", "0" thru "60", and "ON", "OFF". Series C-590 mounts on multiple station pushbutton switches with plungers on ⅝″ centers; Series D-590 — plungers on ¾″ centers. To order: specify Series number and add suffix letter or numeral to part number which describes desired legend. Example: To order C-590 with letter "A" part number would read C-590-A.

K.

Series E-590, dual pushbutton simultaneously actuates two pushbutton stations (⅝″ plunger centers) or individual switches mounted on 1¼″ centers or more. Concave face.

L.

Series 600, similar to Series 590, except has 19/32″ square shoulder. Refer to listings for data on "Glo-Button" pushbuttons, Series X, Y, and Z.

NOTE: Pushbuttons ordered for use with Series 70000 and 71000 switches are not normally assembled to the switches at the factory. For a nominal extra charge, pushbuttons will be installed on switches prior to delivery from factory.

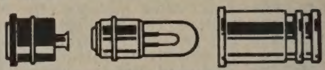
ACCESSORIES FOR MULTI-SWITCH SWITCHES

PUSHBUTTON REMOVAL TOOL

For removal of pushbuttons on DW Multi-Switch switches. Series 70000 and 71000, when not mounted on panel or chassis. Arms on tool fit on each side of switch station "cross-rib" actuators to give uniform lifting force for pushbutton removal. Right-angle tips on arms offer positive levering points on switch frame. Simply slip tool between pushbutton and frame; support buttons by hand, to prevent excessive bending of actuator; pry up gently to loosen, and remove pushbuttons. Rugged .050" thick steel construction is shaped for easy use and virtually infinite life.

Switchcraft Part No. A-1125 .... U.S.A. List Price **$6.25**

LAMP ADAPTER

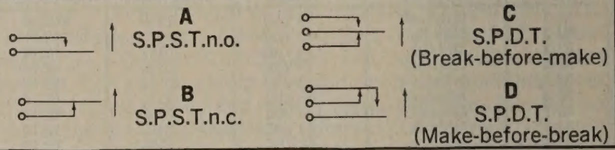


Lamp Adapter, Part No. T-1, converts T-1 lamp base to a T-1¾ lamp base. For Series 21000, 22000, 37000, and 67000. Adapter permits use of T-1 (P-1890) midget flange base in sockets designed for T-1¾ lamps.

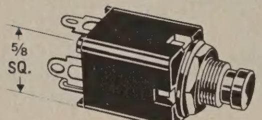
Switchcraft Part No. T-1 .... U.S.A. List Price **$0.90**

BASIC SCHEMATIC CIRCUITS

Switch circuitry can be described as combinations of basic schematic circuits as shown. N.O. means normally open; N.C. means normally closed.



HI-D SWITCH® SWITCHES



Series H-100, H-200—compact momentary action switches. Molded box body protects contact springs. Low electrical leakage, low capacity. Integral fine-silver plated contacts for use in circuits where contact resistance is not critical. One piece plastic button and shaft in red — Series H-100, and black — Series H-200. Mounts on ⅝" centers in either of two planes; in a single ⅜" hole in panels up to 5/32" thick. Depth behind panel 1 3/32". Mtg. hex nut & flat washer supplied. NEW Series H-100PC & H-200PC — Same as Series H-100 & H-200 except terminals are printed circuit type for mtg. on single- or double-sided or multilayer boards. Standoff shoulders on terminals provide stable mtg.

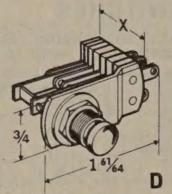
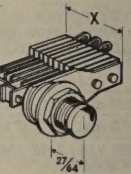
NON-LOCKING FLAT FRAME SWITCHES



D



E

D.

"FF" Switch switches. Series 1000. Flat frame construction offers multiple pole switching with minimum depth behind panel. "Welded silver cross bar contacts rated at 8 A, 125 VAC. 1-pc. black button and shaft. ⅜" diameter threaded shank; mounts in panels up to ¼" thick.

E.

"NF" Switch switches, Series 4000, same as "FF" Switch switches except smaller springs. Ideal for mounting in ultra-compact equipment. Only ½" W.; 1⅝" L.; mounts in ⅜" hole in panels up to 5/32" thick.

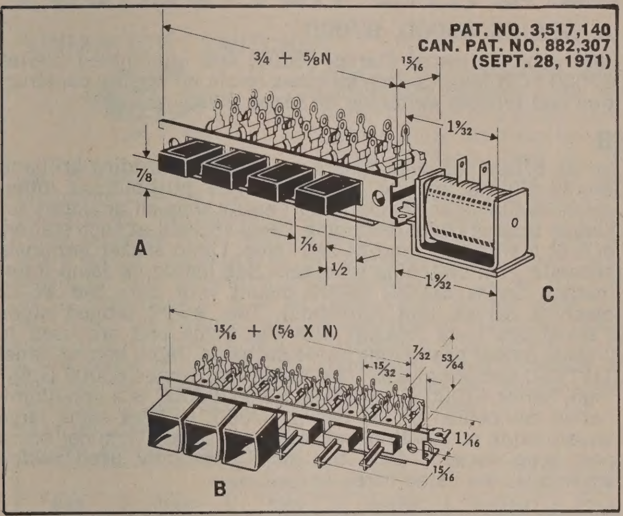
C. SOLENOID RELEASE — DW SERIES

See illustration on next page.

Simple pull-type, solenoid assemblies are available that can be added on the end of a Series 65000, 66000, 67000, 70000, 71000 DW Multi-Switch switch. Solenoid assembly, mounting hardware, screws and instruction sheet furnished. Specify separately.

Part No.	Description	U.S.A. List Price
DW-1	Used with interlock function in switches having 1 to 12 stations. Operates from 115V AC, 60 Hz source. Coil resistance is 361Ω. Duty cycle is 20%.	$7.85
DW-3	Used with all-lock function in switches having 1 to 12 stations. Operates from 115V AC, 60 Hz source. Coil resistance is 130Ω. Duty cycle is 10%.	7.85
DW-4	Same as DW-1 except operates from 24V DC. Coil resistance 14.2Ω.	10.40
DW-7	Same as DW-3 except operates from 24V DC. Coil resistance 8.96Ω.	10.40

DW MULTI-SWITCH SWITCHES



New, economy multiple station pushbutton switch. The DW (double-wipe) Multi-Switch switch is available up to 18 stations in a single row; or on special order, ganged assemblies with interaction between rows. Max. switching per station is 4-C (D.P.D.T.). Each station utilizes specially designed switching modules with U-shaped, high reliable bifurcated contactors rated at 3 amps. A.C.; 0.5 amp. D.C., 125 V. non-inductive load. DW Multi-Switch switches are available in 5 series: 65000, 66000, 67000, 70000, and 71000. All provide four standard functions: Interlock — actuating and pushbutton automatically restores to normal the pushbutton previously actuated. Lock-Out — prevents operation of more than one pushbutton at a time. This feature is included on all interlock switches. Non-Lock — each pushbutton has momentary action. All-Lock — all pushbuttons, except releases, lock when depressed. All pushbuttons restored to normal by actuating (momentary) release pushbutton. Push-Lock/Push-Release — pushbuttons lock when depressed and release when again depressed. All Series—pushbuttons on ⅝″ centers. DW Multi-Switch swtiches are available in single row assemblies with irterlock and all-lock functions from one to twelve stations; with non-lock and push-lock/push-release functions up to eighteen stations.

A. SERIES 65000

Series 65000 switches are completely assembled and tested at the factory. All standard assemblies have 2-C and/or 4-C switch modules with solder-lug terminals. Integral black pushbutton-actuators at each station. Eliminates possible pushbutton loss. Assemblies, from 1 to 18 stations mount with only two No. 6 screws (not furnished). Depth behind panel — 2-C assemblies — 1$\frac{1}{16}$″; 4-C assemblies — 1$\frac{15}{16}$″. Overall switch height is $\frac{27}{32}$″. The following part numbers cover a completed switch assembly. Only the most commonly used switch assemblies are listed here.

B. SERIES 70000, 71000

New versatile DW Multi-Switch switches. Series 70000, 71000 retain all features of Series 65000, but feature "Cross-Rib" actuators which accept 11 different Switchcraft pushbuttons, plus many other types and styles. Series 70000 switches have a $\frac{15}{16}$″ long "Cross-Rib" actuator to accept Series 590, A-590, A-590-T2, A-590-T4, C-590, D-590, E-590, 600 & "Glo-Button" pushbuttons Series X, Y, Z. Series 71000 have ¾″ long "Cross-Rib" actuator to accept same pushbuttons as Series 70000 except Series A-590, E-590. Pushbuttons must be ordered separately as they are not supplied with switches. See listings for pushbutton data. Only the most commonly used switch assemblies are listed here:

A. SERIES 66000, 67000

New non-illuminated (Series 66000) and illuminated (Series 67000) DW Multi-Switch switches retain all quality construction and reliable switching of Series 65000.

B.

Series 67000 has large square pushbutton, providing brilliant, evenly-diffused lighting. Standard white pushbuttons (other colors available on special order) easily snap-off actuators for simple front-of-panel relamping. Lamp sockets, at each station, accept a single 6V, and/or 28V lamp. Lamp socket terminals separate from switching terminals. See listing for lamp information. Series 66000, 67000 mount with only two #6-32 machine screws (not furnished). Two #6-32 tapped studs ("stand offs") are integral with the frame and are used to provide proper positioning of the switches. Depth behind panel 1½″ (2-C switching); 2⅜″ (4-C switching). Series 66000 is 27⁄32″ high; Series 67000 is 1 1⁄16″ high. Series 66000 is a non-illumination companion to the Series 67000. Utilizes same large square white pushbutton, but less lamp socket terminal board and lamp sockets. Only the most commonly used switch assemblies are listed here:

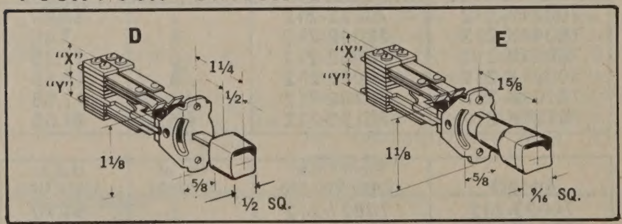
"PUSH-PUSH" SWITCHES



Push-to-lock, push-to-release or momentary action pushbutton switches. Welded cross-bar palladium contacts rated at 2 amps, 200 watts, max., non-inductive load. Mount with two 3-48 screws (not supplied) on ⅝″ centers. Depth behind panel, 2⅞″. Series 5000, Fig. D, non-illuminated, supplied with square brown button. Series 15000, Fig. E, illuminated; available in three lighting arrangements. "L" button lights in "IN" position; "M" button lights in "OUT" position; "N" button lights in "IN" and "OUT" positions. Series 15000 part numbers listed below provide "L" type lighting. For "M" type prefix part no. with "M"; for "N" type prefix part no. with "N". Series 15000 supplied less lamp. 6V or 28V lamps can be used. See listing for lamp data.*

*Add suffix "L" to part number to indicate locking type.

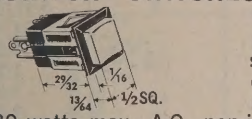
PUSHBUTTON SWITCHES

"UNISWITCH" SWITCHES



New, low cost momentary action pushbutton switches. Only 11/16″ sq. and mount in a single panel cutout, .615″ sq. from front of panel. Contacts rated at 250 ma., 30 watts max.; A.C., non-inductive load. Series US non-illuminated. Series LUS illuminated. Use one 6V, ½ watt, T-1¾ bi-pin lamp. (Not supplied with switch.) See lamp listings. Lamp replaced from front of panel. Both switches incorporate a special "Adjusto-Clip" which allows simple, "snap- lock" mounting. The "Uniswitch" switches mount in panels 13/16″ min. to 17/64″ max. thick in .615″ sq. holes. Depth behind panel only 15/16″ max. "Uni-switch" switches available in 1-A circuit (SPST n.o.). Solder lug terminals for switching also accept #5-40 screw connections. NEW P.C. terminals mount in single- or double-sided boards or multilayers. NEW solder/quick-connect terminals accept AMP Series 110 receptacles.

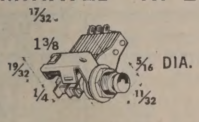
ILLUMINATED "NF-LITE" SWITCHES



Series 4100 and 4200 "NF-Lite" illuminated switches indicate switching and circuit functions at a glance. Flat frame construction provides multiple pole momentary action switching. Lighting circuit is independent of switching circuit. Ideal for control panel or press-to-test applications. Contacts are welded silver cross bar rated at 8 amps, 125 VAC.

Series 4100, uses single miniature lamp; 6V or 28V. Light from lamp is filtered through color chip to clear plastic pushbutton. Various colored chips can be inserted at any time. Series 4200, same as Series 4100, except utilizes two lamps for greater illumination or color coding of two circuit conditons. Both series require 11/16″ min., 15/16″ max., depth behind panel depending on size of stack; mounts in ⅜″ hole in panels up to ¼″ thick. Series 4100 furnished with one kit of 4 color chips (red, amber, green, and yellow). Series 4200 furnished with two kits. Lamps must be purchased separately. See lamp listing.

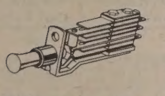
"TT-SWITCH" MINIATURE SWITCHES



Series TT-300 "tini-telephone" switch. Small, compact. Ideal for control panels and chassis where space is at a premium and reliable switching is needed. Available in momentary (non-locking) or Push-to-Lock/Pull-to-Release actions. White plastic knob. Special nickel springs with welded crossbar palladium contacts rated at 2 amps, 200 watts, non-inductive load. Mounts with No. 3-28 screw (not furnished) in ¼″ dia. hole in panels to ⅜″ thick. Depth behind panel 23/16″.

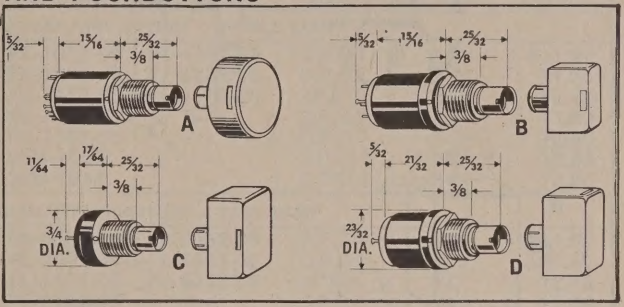
ORCON® SWITCHES, INDICATORS AND PUSHBUTTONS



A. ORCON PUSHBUTTON SWITCHES

Series OA Orcon Switches: Featuring 2PDT through 6PDT circuitry. Contacts are coin silver, cobalt-gold plated with self-aligning SNAP-SLIDE lifting and wiping action. Rated at 2 amps, 60 watts max., DC, non-inductive load; 3 amps, 90 watts max., DC, non-inductive load; 2 amps, 250 watts max., AC, non-inductive load; or 3 amps, 375 watts max., AC, non-inductive load. Threaded shoulders ½″-32 or 9/16″-32 for direct or subpanel mounting. Non-turn key prevents switch from turning in mounting hole. Hex nut and washers supplied. Overall diameter is ¾″; mounting centers as close as ¾″. Numbered solder terminals are silver laminated brass, cobalt-gold plated; pin or turret terminals for hard wiring. Accommodates T-1¾ incandescent lamp. T-1 incandescent bulb with T-2 adapter. See listing for lamp data. Uses Series OP-10, OP-30 and OP-50 Pushbuttons. Lamps not supplied with switches.

B.

Series OB Orcon Switches: Similar to Series OA Orcon Pushbutton Switch, except circuitry is SPDT and DPDT in a 23/32″ diameter case.

ORCON INDICATORS

Orcon Indicators: Lighted indicators make panel displays more attractive while adding easy visual recognition through a variety of pushbuttons (screens) and colors. Electrical ratings are 30 volts, DC or 125 volts AC. Each indicator is matched in size, shape and button configurations with Series OA and OB Orcon pushbutton switches. Uses Series OP-10, OP-30 and OP-50 Orcon pushbuttons. Lamps and adapters not supplied with indicators. See listing for lamp data.

C. Series OJ: Similar to Series OA Orcon pushbutton switch.
Switchcraft Part No. OJ-0100 .... U.S.A. List Price **$6.60**

D. Series OK: Similar to Series OB Orcon pushbutton switch.
Switchcraft Part No. OK-0100 .... U.S.A. List Price **$7.20**

SWITCHCRAFT® INC.

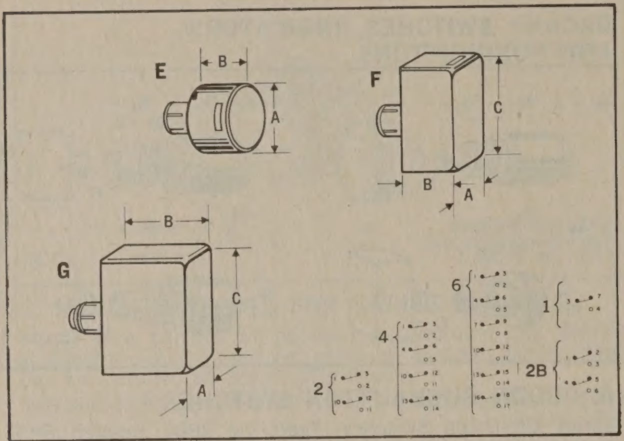
PUSHBUTTON SWITCHES



E. ORCON PUSHBUTTONS

Series OP-10 Pushbuttons: Handsome, functional, round pushbuttons have glossy exterior finish and are molded of stable plastic in colors. Used with Series OA and OB Orcon switches and Series OJ and OK Orcon indicators. Uses 1 lamp.

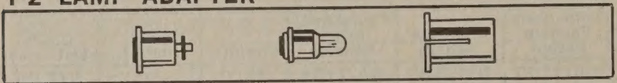
F.

Series OP-30 Pushbuttons: Same as Series OP-10 except pushbuttons are square. Part No. OP-37 uses 2 lamps (redundant lighting).

G.

Series OP-50 Pushbuttons: Same as Series OP-10 except pushbuttons are rectangular. Part Nos. OP-59, OP-60 and OP-61 use 2 lamps (redundant lighting).

T-2 LAMP ADAPTER



Lamp Adapter No. T-2, converts T-1 lamp base to a T-1¾ base. For Series OA and OB Orcon pushbutton switches and Series OJ and OK Orcon indicators.

Switchcraft Part No. T-2 .... U.S.A. List Price **$1.00**

Series OP-10 Round	Size		U.S.A. List Price

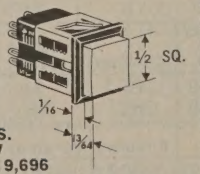
SPECIFYING NOTE: Pushbutton color must be specified by dash (-) and suffix letter — Refer to "SPECIFYING NOTE" above for Series OP-10. Typical part number for ⅝″ x ¾″, blue Series OP-50 Pushbutton is OP-57-B.

* Pushbutton has redundant lighting, i.e., sockets for 2 lamps.

"BOX SWITCH", SERIES BXR



U.S. PAT. NOS. 3,446,467 AND 3,419,696

Miniature non-illuminated momentary pushbutton switch offers broad switching capabilities in minimum panel space. $^{11}/_{16}$″ square switch mounts in panels up to $^3/_{32}$″ thick and occupies only $1^7/_{32}$″ maximum behind panel space. ($1^7/_{32}$″ less panel thickness.) Molded plastic body protects against dust and dirt; prevents bending/disfiguring of contacts caused by excessive handling. Attractive bezel frames pushbutton and acts as built-in escutcheon plate. Unique "Adjusto-Clip" mounting provides snap-in, front of panel mounting in panels from $^3/_{64}$″ to $^3/_{32}$″ thick in .615″ square holes. Red, black, green, or white pushbuttons with $^7/_{64}$″ button stroke. Integral slide contacts of special spring tempered phosphor bronze, silver-plated, rated at 250 ma., 30 watts max., AC, non-inductive load. Choose solder lug/quick connect (AMP FASTON Series 110) or P.C. terminals.

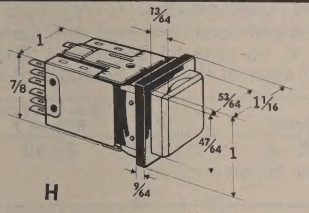
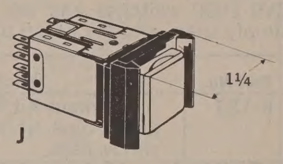
PUSHBUTTON SWITCHES

SERIES PL "PUSH-LITE" SWITCHES



H



J

U.L. LISTED
U.S. PAT. NO. 3,681,552
CANADIAN PATENT NOS. 949,109 (JUNE 11, 1974)
AND 940,179 (JANUARY 5, 1974)

"Push-Lite" switch is the first completely enclosed, lighted pushbutton switch which features long-life, highly-reliable leaf-spring switching. Available in momentary or push-lock/push-release functions; single or twin lamps; with or without barriers; full or split-face display; 1-C to 4-C switching; black or grey switch housing. Standard pushbutton color is white, other colors available on special order. Molded crossbar palladium contacts rated at 2 amps, 200 watts, max., AC, non-inductive load are std. U.L. listed switching up to 8 A available. Mount with clamp-type bracket, no screws, washers or nuts needed.

H.

Flange mounting requires 1" x .875" panel cutout.

J.

Barrier mounting requires 1 3/16" x .875" panel cutout. Can be mounted in vertical or horizontal rows and in matrixes. Depth behind panel only 1 3/4". "Push-Lite" switch accepts standard T-1 3/4 flange base lamps (not furnished with switch) in either 6V or 28V. See listing. Specify one lamp for single lamp style or two lamps of twin-lamp type when redundant or split-face lighting is required. Barriers and colored filter snap-inserts optional.

NEW Series 26U-1000 U.L. listed switches have large welded silver crossbar contacts rated at 8 A, 125 VAC. These high current switches are excellent choice for mandatory U.L. switching.

PUSHBUTTONS/INDICATOR SCREENS

Series PL-500 Pushbuttons/Indicator Screens are available separately for use with "Push-Lite" switches or "PL" Indicators for in-the-field substitution and/or replacement.

Part No.	Color	U.S.A. List Price Per Pkg. of 10	Part No.	Color	U.S.A. List Price Per Pkg. of 10
PL-501	Red	$3.00	PL-508	Yellow	$3.00
PL-503	Green	3.00	PL-512	Clear	3.00
PL-504	Blue	3.00	PL-513	Amber	3.00
PL-505	White	3.00			

COLOR FILTER SNAP-INSERTS

Translucent filters for special color-coding in "Push-Lite" switch and "PL" Indicators. Use with white or clear pushbuttons. Series PL-300 filters are used for full color display; Series PL-400 for split-face display.

† Switch rating is 8 A, 125 VAC, U.L. listed.

OPTIONAL MOUNTING BARRIERS

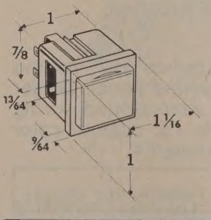
Barriers, molded of plastic, can be used to separate "Push-Lite" switches, "PL" Indicators, or combinations of "Push-Lite" switches and "PL" Indicators and prevent accidental operation of adjacent switches. Series PL-100 is an end barrier. One is required when switches are adjacently mounted; two are required when switches are individually mounted. Series PL-200 is a center barrier. Two are required between switches when adjacently mounted.

J.

"Push-Lite" switch (above) is shown with two, Part No. PL-102 end barriers installed.

Part No.	Description	U.S.A. List Price Per Pkg. of 10
PL-102	End barrier — black	$1.50
PL-111	End barrier — grey	1.50
PL-202	Center barrier — black	1.50
PL-211	Center barrier — grey	1.50

SERIES PL-9000 "PL" INDICATORS



Designed as perfect match for front panel appearance of "Push-Lite" switches — but functions only as a lighted indicator. Create unlimited combination of rows and/or matrix arrays with or without "Push-Lite" switches. Mounts same as "Push-Lite" switches; behind panel depth 1 25/64" max. Uses same lamp, color filter, snap inserts, light divider & optional mounting barriers as "Push-Lite" switches.

Part No.	Description	U.S.A. List Price
PL-9105	Black housing; uses 1 or 2 lamps. White screen.	$2.95
PL-9205	Same as No. PL-9105 except grey housing.	2.95

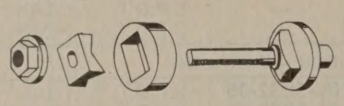
PUSHBUTTON SWITCHES

LIGHT DIVIDER

Light divider for use in standard "Push-Lite" switch pushbuttons and "PL" Indicator screens to separate lighting from twin-lamps. Order a light divider for each switch or indicator specified where split-face lighting is desired.

Switchcraft Part No. PL-551 .... U.S.A. List Price **$2.50** per package of 25

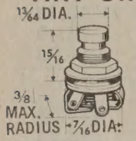
CHASSIS PUNCH



Part No. A-1201 Chassis Punch fabricates rectangular holes in panels or chassis for mounting individual "Push-Lite" switches or "PL" Indicators (without mounting barriers). Requires minimum torque to cleanly punch ⅞" x 1" hole in cold rolled steel (16 ga., .0625" max.) or aluminum (12 ga., .080" max.).

Switchcraft Part No. A-1201 .... U.S.A. List Price **$90.00**

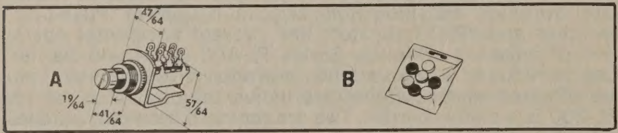
"TINY SWITCH" PUSHBUTTON SWITCHES



Series 950, red button, and Series 960, black button subminiature pushbutton switches for limited space applications. Integral contacts suitable for low level circuits where contact resistance is not important. Mounts in ¼" hole in panels up to 3/32" thick; depth behind panel ⅜".

Part Number		Action	Schematic Circuit	U.S.A. List Price
Red Button	Black Button			
951	961	S.P.S.T.n.o.	1-A	$1.35
952	962	S.P.S.T.n.c.	1-B	1.35
953	963	S.P.D.T.	1-C	1.70

DVR SWITCH SWITCHES SERIES DVR-2000



Recognition of individual switch positions occurs quickly even from a distance, with this single station non-illuminated pushbutton switch. With plunger in the "out" position, a black recognition color band contrasts with the recognition cap color. With plunger set to the "in" position, only the colored recognition cap is visible. Special copper alloy, silver plated, U-shaped contactors assure uniform tension. Contactors are rated at 0.5 amp, DC, 3 amps, AC, 125 volts, non-inductive load. Also available with 1-C circuitry rated at 11 amps., 125/250 VAC, ¼ hp. Threaded bushing mounts in a single-hole .468" (15/32") diameter in panels up to ¼" thick. Mounting centers are ¾" minimum. If non-turn mounting is required, bushing has machined slot to mate with keyed panel hole. Nickel plated copper alloy mounting nut is supplied.

A.

Series DVR-2000: 1-C or 2-C circuitry; requires 1 5/32" behind panel; 3-C or 4-C circuitry requires 2 1/32" behind panel. Solder lug terminals has 5/64" diameter hole and wrap-around wiring notches. Order Recognition Color Cap Kits for custom color coding according to your individual requirements.

Part No. Momentary (Non-Lock)	U.S.A. List Price	Part No. Push-Lock/ Push-Release	U.S.A. List Price	Switching

DVR-2206	2.15	DVR-2706	2.40	2-C
DVR-2209	2.40	DVR-2709	2.70	3-C
DVR-2212	2.70	DVR-2712	3.10	4-C
DVR-22P3	6.70	DVR-27P3	7.00	1-C‡

‡ Switch rating is 11 amp, 125/250 VAC, ¼ hp.

B. RECOGNITION COLOR CAP KITS

Recognition Color Caps in black and colors are used with Series DVR-2000 switches and are to be ordered separately. Caps simply snap onto the keyed plunger of the DVR Switch switch.
